A suggested arrangement of the center area of the daisy campground, DESIGN sheet O-5764. Note that the travel trailers in the upper left and lower right are served by complete hookups, as is the pickup coach on the right. The camping trailer on the left, and the tent in the upper right have extension cords connected to electric outlets at the edge of the circle. Underground utilities traverse the campground and radiate outward from the center to serve each site. While sewer connections serve each site, the electric and water connections are positioned at the circle edge so that each serves two sites.
