New On-line Class on Air Resources

All parks have air resources, but, because air is invisible and easily crosses park boundaries, many people do not think of it as a resource that the park service manages. In fact, the NPS has an important role in managing air quality and understanding its impacts on parks.

Air Resources in National Parks provides a basic understanding of what air resources are; why they are important; and the laws, regulations, and policies that guide and govern their management. The course will also introduce the science of air pollution, air quality monitoring, visual resource management, and some of the air-related issues faced by parks throughout the service, including several case studies. It will provide learners with resources to explore air quality and management issues at their own unit, and sources for more in-depth information and assistance in dealing with specific problems.

This class is intended for anyone who wishes to learn more about air resources within the national park system.

Air Resources in National Parks is available in DOI Learn

Course Code: NPS-NRS1503

Cost: Free
