The National Parks Portfolio
(THIRD EDITION)

A presentation of the national parks and national monuments in picture. The selection is from the best work of many photographers, professional and amateur. It contains nine chapters descriptive each of a national park, and one larger chapter devoted to other parks and monuments. 248 pages, including 306 illustrations.

Sent postpaid, upon receipt of price in cash or money order, by the Superintendent of Documents, Government Printing Office, Washington, D.C.

GRAND CANYON NATIONAL PARK.

GENERAL DESCRIPTION.

The Grand Canyon National Park is in northern Arizona. Its 958 square miles inclose 56 miles of the Grand Canyon stretching west of its beginning at the mouth of the Marble Canyon. Through it winds the Colorado River for a distance of 103 miles. From rim to rim the canyon varies from 8 to 20 miles in width; it is more than a mile deep measured from the north rim, which averages nearly a thousand feet higher than the south rim. The eastern boundary includes the lofty painted walls east of which lies the Painted Desert. Its western boundary includes the broad Havasu Canyon, tributary from the south, in whose depths we find the Havasupai Indian Reservation and a group of fine waterfalls markedly different from any in our other national parks.

The park boundaries hug the rim closely. Very little of the country back of the rim is included in the reservation, scarcely enough in places to take care of the great increase of travel which national parkhood will bring to the Grand Canyon during the next several years. These border lands are wonderfully attractive. The northern rim is heavily forested with pine and spruce interspersed with beautiful glades of quaking aspen. The southern rim carries a slender semiarid flowering vegetation of rich beauty and wide variety and south of the railroad station lie a few square miles of fine yellow pine forest.

The Grand Canyon was made a national park in February, 1919, thirty-three years after Benjamin Harrison, then Senator from Indiana, introduced the first of several bills to give it park status. Politics, local apathy, and private interests, which sought to utilize its water power and to find minerals in its depths, were the principal causes of delay. All efforts failing to make it a national park, in 1908 President Roosevelt made it a national monument. Once a railroad was surveyed through it. A scenic railroad was projected along its south rim. Less than a year before it became a park efforts were making in New York to raise money to dam its waters for power and irrigation.

A MIGHTY SPECTACLE.

There is no doubt that the Grand Canyon is one of the world's very greatest spectacles. It is impossible to compare it with the tremendous white spectacle of the Himalayas, or with the House of
Everlasting Fire of the Hawaii National Park, or with the 17,000 feet of snow and glacier which rise abruptly between the observer's eyes and the summit of Mount McKinley, because it has nothing in common with any of these. But of its own kind there is nothing in the world which approaches it in form, size, and glowing color; it is much the greatest example of stream erosion. And in its power to rouse the emotion of the looker-on to stupefy or to exhilarate, it has no equal of any kind anywhere, unless it be the starry firmament itself.

Approaching by rail or road, the visitor comes upon it suddenly. Pushing through the woods from the motor camping ground, or climbing the stairs from the railroad station, it is there at one's feet, disclosed in the sublimity of its templed depths, in the bewildering glory of its gorgeous coloring. There is no preparation of mind and spirit. To some, the revelation is a shock, no matter what the expectation. The rim of the Grand Canyon is one of the stillest places on earth, even when it is crowded with people.

To describe the Grand Canyon is as impossible as it is unnecessary. Few natural spectacles have been so fully pictured, few are so familiar even to the untraveled. Its motionless unreality is one of the first and most powerful impressions it makes. And yet the Grand Canyon is really a motion picture. There is no moment that it does not change. Always its shadows are insensibly altering, disappearing here, appearing there; lengthening here, shortening there. There is continual movement. With every quarter hour its difference may be measured.

There is the Grand Canyon of the early morning, when the light slants lengthwise from the Painted Desert. The great capes of the northern rim shoot into the picture, outlined in golden light against which their shapes gloom in hazy blues. Certain temples seem to rise slowly from the depths, or to step forward from hiding places in the opposite walls. Down on the green floor the twisting inner gorge discloses here and there lengths of gleaming water, sunlit and yellow.

An hour later all is wholly changed. The dark capes have retired somewhat and now are brilliant-hued and thoroughly defined. The temples of the dawn have become remodeled, and scores of others have emerged from the purple gloom. The Granite Gorge, now detawled fully, displays waters which are plainly muddy even at this great distance. And now the opposite wall is seen to be convoluted, possessing many headlands and intervening gulfs.

And so, from hour to hour, the spectacle develops. Midday, with sun high behind the south rim, is the time of least charm, for the opposite walls have flattened and the temples of the depths have lost their defining shadows. But as afternoon progresses the spec-
tacles of the morning creep back, now reversed and strangely altered in outline. It is a new Grand Canyon, the same but wonderfully different.

And just after sunset the reds deepen to dim purples and the grays and yellows and greens change to magical blues. In the dark of a moonless night the canyon suggests unimaginable mysteries.

**THE FIRST VIEW.**

From the railroad station the visitor ascends to El Tovar Hotel and the view of the canyon at perhaps its showiest point. Here is where the temples loom their biggest and are nearest by. Here the Granite Gorge approaches nearest to the south rim. The view of El Tovar is restricted by the extension of Grandeur Point and Maricopa Point on either side. These cut off the view of the great reaches of the canyon east and west. El Tovar view is a framed picture of limited size. It is better so; better for the newcomer to enter gradually into the realization of the whole which will come when he walks or rides out to the many points which push northward from the south rim; better also to return to after days spent on the rim or in the canyon's depths.

Having studied this view for general outlines and the canyon's conformation, stratification, and coloring, the visitor will find for himself, on foot or by motor stage or coach, many points which will afford him varied outlooks upon the broad reaches of the canyon. It is advisable to see the canyon from end to end from the rim before exploring the trails to the floor and the river.

The traveler who is unlucky enough to have no more time at his disposal may, even in one day, see much of the Grand Canyon either from the rim or by mule-back descent to the depths as preference dictates. Probably the one-day visitor can see more by taking the 16-mile Hermit Rim Road drive west in the forenoon and the 60-mile drive east to Grand View and Desert View in the afternoon than in any other way. Both the rim drives and the descent into the canyon may be had in two days. Every day added to the schedule will give the visitor further novel experiences and glorious views, such as the Hermit Loop trip, the Phantom Ranch trip, or to the North Rim of the canyon, visiting Ribbon Falls en route.

When you go to the Grand Canyon leave the duration of your stay open for decision when there. You will probably then remain from five days to two weeks. Two weeks of fairly steady going will enable you to see the Grand Canyon thoroughly without undertaking trips which are a hardship to persons unaccustomed to trail riding.
A free information bureau is maintained by the National Park Service in the Administration Building, where the superintendent's offices are. Park visitors are welcomed and are advised to apply to the attendant in charge of this bureau for official information of any kind.

A suitable reference library is being accumulated for the use of visitors, and the Government maps and other publications may be consulted or secured here.

Automobile arrivals are requested to register at this bureau, unless previously registered at a checking station.

Living is pleasant and comfortable. El Tovar Hotel offers delightful conditions at rates reasonable in these times for its high-class accommodations. Its porches are broad, its garden a collection of rich semiarid vegetation, its rim walks inspiring. There is horseback riding through many miles of yellow-pine forest and out to viewpoints on the rim, but there are no sports. There is neither golf nor tennis. The canyon absorbs the whole attention of its visitors.

Adjoining the hotel there is a most comfortable annex of cottages and tents and café; rates are lower than those charged at the main hotel. There are comfortable tent cottages at Hermit Creek Cabins on the Hermit Trail, and at Phantom Ranch across the Colorado River. The latter cottages are built of the native rock, with mess hall, etc. Both these resorts are first class in every respect. There are cottages at Desert View, where one may spend a few nights. Camping trips along the rim and down to the Havasupai Indian Reservation and the waterfalls of Havasu Canyon can be arranged. It is possible to take your pack train across the river on the Kaibab Suspension Bridge, stay overnight at Phantom Ranch, and ascend the most interesting Kaibab Trail up Bright Angel Canyon to the excellent public camp on the north rim of the canyon. This trip is a matter of several days.

From April to November the south rim is free from snow and the free public camp ground near Grand Canyon Village is available to campers. Motorists are urged to bring their own camp equipment and make use of this camp. Sites will be allotted free of charge on application to the office of the superintendent of the park. There is a garage in the village where gasoline and oil can be procured.
There is also a general store where groceries can be purchased. It is necessary to purchase water in the village, as there is none at the Grand Canyon and it must be hauled from a distance by rail.

SEEING IT FROM THE RIM.

East of the hotel are several points reached by motor roads which afford fine views of the upper half of the Grand Canyon. The most famous of these is Grand View, where still stands the first regular hotel of the canyon, now private property. The eastern terminus of the road is Desert View, which offers a view up the Marble Canyon, and eastward over the famous Painted Desert. West of the hotel the auto stages stop at a succession of fine points, each with its own individual view of the mighty spectacle.

There is much to see also in the neighborhood of El Tovar.

The Grand Canyon Rim Foot Trail extends along the canyon rim east to Grandeur, Yavapai, and Yaki Points through the pine forest, and west to Maricopa, Sentinel, and Hopi Points.

Numerous paths lead out both east and west from Grand Canyon Village through the woods to advantageous points of view on the rim. These paths are inviting to the hiker, or, if one desires to combine horseback riding with viewing the spectacle thus reached, he may do so over these paths, where the footing invites a canter, the surroundings furnish shade and beauty, and automobiles do not intrude.

DESCENDING THE CANYON.

There are two practicable trails from the south rim to the river. The one commonly used starts from El Tovar Hotel and descends the deep alcove between Grandeur and Maricopa Points. This is the celebrated Bright Angel Trail.

The descent of this trail is usually done on muleback in parties led by guides. It is a sad mistake for persons not in the soundest physical training to attempt it on foot, for the apparent distance as seen from the rim is misleading, and the climb back is most arduous at that elevation. The south rim of the canyon at El Tovar is 6,866 feet above sea level. Nearly every day one or more trampers, overconfident of their endurance, find the way up too arduous and have to be assisted by guides and mules sent down for them from the rim.

The descent is an experience of great charm. The trail is well built and kept in good condition. The traveler passes in review all the strata which form the canyon walls; their close examination will be a source of pleasure. Just under the rim the trail passes through a fine forest of spruce, and from this down to the sage desert of the
GRAND CANYON NATIONAL PARK.

green floor the traveler will also pass in review a series of vegetation which represents scores or hundreds of miles of surface growths. There are two steep cliffs which the trail descends in series of short hitches of zigzags, one of which, known as Jacob's Ladder, carries the traveler down the famous Redwall limestone, which is so distinct a scenic feature of the canyon from every rim view. But there need be no alarm about these descents, for the zigzags, short and numerous though they are, maintain always a uniform safe grade. It may affect the unaccustomed nervously to see his mule hang his head over short abysses at the turns, but the traveler himself does not hang over them, and the mule is sure-footed, stolid, and indifferent. There is only one creature with less imagination than a mule, and that is his cousin, the burro.

Indian Garden, which lies on the floor of the canyon, is so named because Havasupai Indians once cultivated the soil through which passes the stream which originates in springs below the Redwall. It is called Garden Creek. The Indian Garden now is a tangle of high brush, principally willow, through which the trail passes out upon the Tonto Platform, and presently plunges down the rocky gorge which leads to the edge of the muddy Colorado.

THE HERMIT TRAIL.

A much finer trail from every point of view than the Bright Angel starts from Hermit Rest, south of Pima Point, and descends the Hermit Canyon. It begins 7 or 8 miles west of El Tovar. This is a two days' journey, including a night spent in Hermit Cabins well down in the canyon. It involves an experience worth many times the additional day which it requires.

The Hermit Canyon is one of extreme beauty; there is probably no other which equals it in gorgeous coloring and the variety of its rock forms. The trail, whose grade is less than that of the Bright Angel, is one of the finest in the world. It is longer than the Bright Angel Trail and leads out upon impressive points overlooking fascinating views. The descent of the Redwall limestone is a masterpiece of trail building, and the only part of the Hermit Trail which gives an impression of steepness; but this may readily be walked down by the unaccustomed rider; its descent is not nerve racking. The night at Hermit Cabins, under a towering crimson gable, with colorful Hermit Canyon on the south and Grand Canyon opening northward over the green shale of the Tonto Platform, or "lower plateau," is as comfortable as it is fascinating. The trip to the river and back to the camp is usually made the first day.
THE TONTO TRAIL.

Too few visitors to Hermit Cabins combine the two trail trips with a journey between them over the Tonto Platform. The descent is by the Hermit Trail with a night at its foot. The next morning the journey is made on muleback up the canyon to the Indian Garden, and from there, after lunch by the stream side, up the Bright Angel Trail to El Tovar.

THE HAVASU CANYON.

The Havasu Canyon in the far western end of the national park is rarely visited. The trail begins at the end of a long desert road by descending precipitously to a gorge through which the Havasupai Indian Reservation is reached. There are less than 200 Indians on the reservation. These live by farming the land irrigated from Havasu Creek; corn is their principal product, but melons, figs, and peaches are also produced. The reservation fills a broad amphitheater in the gorge surrounded by lofty red sandstone cliffs of the Supai formation. There are no hotels or camps and the heat is intense in summer. The Havasu Creek water is strongly impregnated with lime and unpalatable, though entirely wholesome. Nevertheless, the visit to the reservation is one of unusual character and charm for those who do not object to a little hardship.

Below the reservation the canyon breaks into a series of waterfalls, two of which are unusual in kind and beauty. These are the Havasu Fall and the Hualapai Fall. Both drop over lofty shelves, which are plastered on back and sides by richly carved festoons of lime travertine. Both the falls occur in deep gorges in the Redwall limestone. Bright green cottonwoods, cactus, and other desert vegetation enliven the scene, which is as different as imagination can well paint from anything else in the Grand Canyon National Park.

In the spring, following the melting of the rim snows, there are various waterfalls in the Grand Canyon itself, several of which last for some months. These occur on the north side of the river, where there is a greater supply of water, the south side being arid except for brief periods following meltings and cloudbursts. One of these temporary north-side waterfalls in Clear Creek, which has been seen by very few persons, is said to be more than a thousand feet in height. With the crossing of the river, which is now possible over the Kaibab Suspension Bridge, these and many other fascinating spectacles, now little known, will become familiar sights to many. The destiny of the Grand Canyon is to become one of the most used national parks.
ORIGIN AND GEOLOGIC HISTORY OF THE GRAND CANYON.¹

The Grand Canyon is the deepest and widest of a long series of canyons through which the Colorado River flows for 500 miles across a region of high table-lands known as the plateau province or the Colorado Plateaus. These canyons are unusually steep sided and unusually deep, but they are merely parts of the valley of the river, and, like most other river valleys, they have been formed by the stream that occupies them; they are not, as some who are unfamiliar with geologic processes have supposed, due to any violent or catastrophic breaking of the earth's crust. The Grand Canyon is perhaps the world's most spectacular illustration of the accumulated results of erosion—of the combined action of running water, rain, wind, and the various atmospheric agencies that attack the rocks and sculpture them into the forms that give character to a landscape.

A PECULIAR TYPE OF LAND SCULPTURE.

The scenery of the Grand Canyon is the supreme expression of a type of land sculpture that is peculiar to the plateau country, a type whose elements are cliffs and tabular forms—buttes, mesas, terraces, and plateaus. The high plateau into which the river has cut its way is built up of layer upon layer of rock beds that lie nearly level and that extend continuously over great distances. These beds, as one may see in the walls of the canyon, consist of sandstone, shale, and limestone, which have been grouped by geologists into the formations shown in the generalized columnar section forming Figure 1. This figure presents a summary of the facts relating to the character of the rocks exposed in the Grand Canyon National Park and the thickness, attitude, order of accumulation, and structural relations of the formations.²

ARCHITECTURAL FORMS DOMINATE THE CANYON.

As the formations lie in orderly horizontal layers, like beds of masonry, they have been carved into definite architectural forms, which are everywhere nearly identical in profile though varied and irregular in plan, and as they vary in their resistance to erosion, some being hard, some soft, every part of the canyon wall, every pinnacle and butte, is characterized by its own steplike alternation of cliff, slope, and shelf. Each resistant bed stands forth as a cliff,

² The term "formation" is generally applied to a group of rock beds that are of about the same age, as shown by the fossils they contain, or that are considered together for convenience in mapping or description. A formation is named from the place where it was first studied or from some place or region where it is well exposed. The Kaibab limestone, for example, is so named because it is well exposed on the Kaibab Plateau.
FIGURE 1.—Generalized columnar section showing position and structural relations of the rocks of the Grand Canyon National Park, and the age, character and thickness of the groups and formations into which they are divided.
Figure 2.—Generalized sections across Grand Canyon, looking up Colorado River. A, in Eastern Kaibab division, east of Desert View Camp; B, in Central Kaibab division, near Hermit trail; C, in western Kaibab division, west of Bass Camp. K, Kaibab limestone; C, Coconino sandstone; H, Hermit shale; S, Supai formation; R, Redwall limestone; M, Temple Butte and Muav limestones; B.A, Bright Angel shale; T, Tapeats sandstone; GC, Grand Canyon series; V, Vishnu schist. The different profiles exhibited by the canyon in these sections are due to changes in the character and thickness of the rocks, as explained in the text.
and each weak bed is marked by a slope. Each shelf or platform is made by the wasting back of a weak stratum that lies upon a resistant, cliff-making stratum, and the greater the thickness of the weak stratum the broader the shelf. The plateaus that border the canyon are themselves simply great terraces developed on a resistant formation, the Kaibab limestone, from which overlying softer beds have been washed away. As erosion goes on parts of the canyon wall or plateau become separated by the widening of branch canyons or ravines and stand as solitary outliers capped by remnants of a hard bed of rock. These remnants are the buttes and temples. The great height of the plateau gives rapid fall to the streams that enter the canyon and enables them to cut powerfully and deeply and thus to carve the rocks into forms that are fashioned on a gigantic scale. The erosion accomplished by these streams, though spasmodic, because the streams are mainly fed by spasmodic rainstorms in an arid climate, is none the less effective. The slopes here are partly bare of vegetation because the desert plants grow far apart, and the concentrated energy of a single torrential shower may therefore wreak more havoc than would be caused by a season's rainfall on plant-covered slopes in a humid region. It is this prevailing aridity that, by retarding the growth of vegetation and the formation of soil, keeps sharp and fresh profiles that in a moister region would soon be dulled or obscured.

SECTIONS ACROSS THE CANYON.

The three sections across the Grand Canyon shown in Figure 2 (A, B, C) illustrate the intimate relation between the profile of the wall and the character of the rocks. In A, where the rocks along the river are the weak shales of the Algonkian Grand Canyon series, the bottom of the canyon is a broad valley having gently sloping sides. In B these weak stratified rocks are replaced by the hard Archean crystalline rocks, and the river occupies a narrow gorge—the Granite Gorge. As these hard crystalline rocks are not arranged in beds and are all about equally resistant to erosion the walls of the Granite Gorge have a steep, continuous slope, which presents a striking contrast to the steplike profile of the wall in the overlying bedded Paleozoic rocks. In C the river occupies a narrow box-shaped vertical-walled canyon in the hard Tapeats sandstone, the basal formation of the horizontal Paleozoic beds.

In C the weak Hermit shale, in the upper wall of the canyon, is thick and consequently wastes far back from the summit of the underlying hard Supai sandstone, leaving a wide platform known as the Esplanade. This platform, because of its great width and its
The conspicuous red color, is the dominant feature of the canyon landscape in all the western part of the national park. But the Hermit shale steadily gets thinner eastward in the canyon, as may be seen in sections B and A, whereas the overlying cliff-making Coconino sandstone, which defends the retreat of the wall above the Esplanade, gets steadily thicker in the same direction. The Esplanade thus becomes a narrow bench in B and fades to an inconspicuous ledge in A.

In B the weak Bright Angel shale has determined a similar platform in the bottom of the canyon. This platform, known as the Tonto platform, or the "lower plateau," is widest in the region about and east of Bright Angel and Hermit trails, where it is a familiar feature to tourists. It gets narrower westward as the overlying Muav and Redwall formations grow thicker and become firmer in texture.

This marvelous adjustment of external form to the inequalities of rock structure and character affords to the geologist the strongest evidence that the canyon is the work of erosion.

A UNIQUE REVELATION OF GEOLOGIC HISTORY.

A large part of ancient geologic history is revealed more clearly in the walls of the Grand Canyon than in any other place in the world. The beds of rock seen in the canyon were all laid down in water as layers of sand, mud, and limy ooze and in time were hardened into rock by the great weight of the layers above them, the lime and silica that they contained cementing their particles together. As rocks of this kind are composed of sediment deposited in water the geologist calls them sedimentary rocks, and as they are piled in beds or strata one above another they are said to be stratified, and the beds are called strata.

The horizontal strata seen in the walls of the canyon were formed during the Paleozoic era (the era of "old life"); they represent the oldest series of rocks that have yielded clearly identifiable traces of life. Many of the strata contain the remains of marine animals and were therefore evidently laid down on the bottom of the sea, although the region now stands high above the present sea level. Others, notably certain beds of red shale and sandstone in the Supai and Hermit formations (see fig. 1), appear to have been spread out as mud and sand on low-lying land or on delta plains by shifting streams; and one formation, the Coconino sandstone, is regarded by some geologists as a sand-dune deposit. Nearly all the Paleozoic formations contain some traces of life—in the Kaibab and the Redwall limestones there are corals and many kinds of marine shells; in the formations of the Tonto group, the remains of primitive shellfish,
worm trails, and impressions of seaweeds; in the Temple Butte limestone, the remains of an ancient type of fish; and in the Hermit shale, impressions of long-extinct plants. Fossil tracks of small animals, probably older forms of amphibia, occur in the Coconino sandstone along the Hermit trail. The aggregate thickness of the Paleozoic rocks varies from place to place, but in the part of the Grand Canyon that is included within the National Park it averages 4,000 feet.

ROCKS OLDER THAN THE PALEozoIC.

Ancient as are the formations of the Paleozoic era, two great systems of rocks—the Algonkian and the Archean—are buried beneath their base and appear only in the depths of the canyon. The rocks of the older system, the Archean, form the walls of the Granite Gorge. They are the foundation rocks of the region, and they are totally unlike the Paleozoic rocks, for they are entirely crystalline, are not stratified, and show a crumpled banding due to the arrangement of their constituent minerals in parallel layers, an arrangement produced by heat, pressure, and recrystallization. The Archean rocks are mainly of the type known as gneiss and schist, but they include granite in large masses and dikes that have been intruded while molten into the gneiss and schist. The Archean rocks have been named the Vishnu schist. They contain no traces of life.

The rocks of the younger of these two systems, the Algonkian, are intermediate in age between the Archean and the Paleozoic rocks and occur here and there in the depths of the canyon in wedge-shaped masses that lie between the Archean and the Paleozoic. They can be easily distinguished by the casual observer in the region between Grand View and the mouth of the Little Colorado, where at least 12,000 feet of them remain. Small masses are exposed near the mouth of Bright Angel Creek opposite El Tovar, on Crystal Creek, on Shinumo Creek, and along Colorado River west of Powell Plateau. These rocks, like the Paleozoic, are stratified and do not differ greatly in character and appearance from some of the Paleozoic strata, notably the red Supai and Hermit formations, but, unlike the Paleozoic strata, they have been tilted from the horizontal position in which they were originally deposited, so that they are inclined at various angles. These Algonkian rocks have been named the Grand Canyon series. The few obscure fossils found in them are so poorly preserved that they tell very little concerning the primitive life of the period.

GREAT UNCONFORMITIES.

Each of these two great rock systems—the Archean and the Algonkian—is separated from the one that overlies it by a nearly even

36° 7' 23" — 4
surface that cuts across or truncates all underlying beds or masses. This truncation marks what is known to geologists as an uniformity. Each unconformity means that the rocks below it were worn down by streams or waves to a nearly level surface before the material that formed the overlying rocks was deposited.

The top of the Paleozoic series is also marked as an unconformity, for although the Paleozoic beds are the highest that appear in the wall of the Grand Canyon they actually once lay beneath a later thick series of horizontal deposits. The traveler who comes to the Grand Canyon from the north descends step by step in southern Utah a great series of cliffs and terraces carved in horizontal beds, much like the Paleozoic. The most noted scenic features of southern Utah—Zion Canyon, Bryce Canyon, and the Vermilion, White, and Pink cliffs—are carved in these beds, which overlie the Paleozoic and represent deposits of later systems, the Triassic, Jurassic, and Cretaceous, which are of Mesozoic age, and part of a still later system, the Tertiary. These later beds once extended across the entire region in which the Grand Canyon lies, covering it to a thickness at least twice as great as the canyon is deep, but nearly all of them have been worn away by erosion. A few small masses of them still remain as buttes on the Coconino Plateau south of the Grand Canyon. One of these, Red Butte, lies 15 miles south of El Tovar. Another, Cedar Mountain, lies 2 miles east of the rim of the Grand Canyon near Desert View. Cedar Mountain is interesting because the formation that caps it, the Shinarump conglomerate, contains logs of petrified wood. The petrified forests of Arizona (Petrified Forest National Monument), which lie southeast of the Grand Canyon region, occur in a formation that immediately overlies the Shinarump conglomerate and that is exposed over wide areas but has been removed from Cedar Mountain and Red Butte by erosion.

The rock record just described is laid bare in the Grand Canyon and in the cliffs of southern Utah with the clearness of a diagram, so that the sequence of geologic events in the region can be read from it with ease and certainty. The unconformity that truncates the Archean rocks means that an enormous thickness of overlying rock had been removed from them before the Algonkian beds that now lie upon them were deposited, and consequently that a vast region, once high and mountainous, was reduced by erosion through long ages to the level plain represented by the unconformity.

When the land had been worn down to a plain it sank and was buried under at least 12,000 feet of mud and sand that now form the Grand Canyon series of Algonkian age. After these beds had thus accumulated they were uplifted, tilted, and broken into huge
blocks that must have formed high ranges of mountains. Then followed a long period of erosion, during which the mountains were worn down nearly to a plain. This plain is represented by the unconformity that separates the eroded Archean and Algonkian rocks from the overlying horizontal Paleozoic strata. Exposed as it is for the entire length of the Granite Gorge and for many miles upstream from the Granite Gorge, and visible everywhere from the rim of the canyon, this unconformity is the most spectacular known illustration of such a feature. It was not so even a surface as the older unconformity, for some of the hard sandstones of the tilted Algonkian blocks long resisted erosion and stood as low hills on the plain. A section of one of these hills is visible in the canyon wall from El Tovar. It lies under Cheops Pyramid, just west of the mouth of Bright Angel Creek, and it rises well above the base of the Paleozoic beds, which were deposited around it.

**SUBMERGENCE, DEPOSITION, UPLIFT, AND EROSION.**

At the end of Algonkian time the land was again submerged, and the horizontal Paleozoic, Mesozoic, and early Tertiary strata were slowly deposited. The time consumed by the deposition of these strata, whose aggregate thickness exceeds 15,000 feet, was long, even in the geologic sense of the word "long," for it must be estimated in millions rather than in thousands of years, spanning as it does the countless ages during which life was evolved from the primitive marine shellfish to the apelike predecessor of man. Yet it was short in comparison with the time consumed by the succession of events recorded before the Paleozoic strata were laid down, for that earlier period was inconceivably long, certainly far longer than all the time that has elapsed from the beginning of the Paleozoic era to the present day.

In Tertiary time the region was again uplifted and a period of erosion began. Streams cut channels into the surface of the land and in time formed broad valleys, which thus continued to expand until at last most of the land stood but little above the level of the sea. At the end of this period of erosion, which is sometimes called the great denudation, most of the strata above the Paleozoic had been removed from the Grand Canyon region; their edges had been worn back northward 50 miles to the border of Utah, and the surface of the region had been reduced to a nearly even plain. The present course of the Colorado River must have been determined by a topography different from that of to-day, for in most of the region that lies within the National Park, as one may see at El Tovar, the land south of the canyon slopes directly away from its rim, so that the canyon runs across instead of down a slope.
The uplifts of the region that raised the Paleozoic and Mesozoic strata in Tertiary time were very different from those recorded beneath the unconformities in the canyon walls. The rocks were not compressed and folded, like the Archean, nor were they broken into tilted masses, like the Algonkian; instead, the whole region was lifted bodily, the strata still preserving essentially the horizontal attitude in which they were laid down. Yet the uplift was not equal over all parts of the region. If, for example, we should cross the Kaibab Plateau from east to west, say from House Rock Valley to Ryan, we should find the limestone strata at its western margin ending suddenly in a cliff and appearing again 1,500 feet below, on the surface of the plateau on the west—the Kanab Plateau. Such a break, along which the strata on one side have slipped past those on the other, is known as a fault. At the eastern margin of the plateau we should find the strata bending suddenly downward in a great curve returning again as sharply to a horizontal attitude, and continuing eastward as the surface of the Marble Platform. This type of dislocation is known as a flexure, or fold.

The uplifted Grand Canyon region is divided into great horizontal plateau blocks like the Kaibab Plateau by dislocations of the type just described, either folds or faults, that trend north and south; and the Grand Canyon crosses these plateaus from east to west. The name of each plateau has been given to the section of the canyon that crosses it. Thus the section of the canyon that transects the Kaibab Plateau is known as the Kaibab division. The Grand Canyon National Park includes all the Kaibab and part of the next western division—the Kanab.

In addition to the great dislocations that separate the plateaus there are numerous small faults and folds in the region, some of them in the Grand Canyon. Many visitors who have noticed the faults ask whether the canyon does not owe its origin or at least its course to a fault, but although geologists have studied the canyon at many places they have found no evidence of the existence of such a fracture. If it existed it could not have escaped notice, so perfect are the exposures of the beds in the rocky walls along the numerous turns of the river. Nor do any considerable parts of the canyon coincide with faults. On the other hand, it may be said that faults have guided the course of many tributary gorges in the Grand Canyon, and even some parts of the course of the river, though not in the way popularly supposed. Erosion, not dislocation, has been the chief agent that determined the course of each gorge. Movement along some of the faults, by crushing the adjacent rock, has formed zones of weakness, which, under the searching action of erosion, have become ravines or gorges. An example is the gorge of Garden Creek,
GRAND CANYON NATIONAL PARK.

which is followed by the Bright Angel trail in front of El Tovar. The course of this gorge has been determined by a small fault, which has shattered the great cliffs of the Coconino sandstone and Redwall limestone and has made possible the construction of the trail. The strata have been displaced about 100 feet by the faults, those on the west side having been relatively elevated.

THE WORK OF MAKING THE CANYON.

During the last great uplift of the region, which may still be in progress and which has raised the plateau to its present height, the land rose so gradually that the river remained in its original channel and kept cutting deeper and deeper. The canyon is thus deep because the land is high and because, in this arid region, the river, fed by the rains and snows of the Rocky Mountains and armed with great quantities of mud and sand and gravel, washed into it by its tributaries, has lowered its bed faster than its tributaries could lower the adjacent plateau. But, although the Colorado River has thus dug the canyon, the various forms of rock sculpture seen in the walls of the canyon have been determined by variations in the behavior of the beds under the attack of the agents of erosion. And this erosion is still going on. The observer of to-day who stands in awe on the brink of the canyon or who finds his way precariously down the trails that lead to its depths should realize that the work of making this mighty chasm is not yet finished. The various agents that have modeled the canyon—the rushing torrent below and the small streams that descend to join it, the intermittent rain and snow and frost, and those subtle yet effective chemical activities that aid in the decay of the rocks, and, above all, the ever dominant pull of gravity on all loose particles—all are still at work on this wonderful piece of earth sculpture. In the Grand Canyon of to-day we see the accumulated results of the action of powers that apparently leave from year to year but slight traces of their action but that, persisting in their work through uncomputed ages, have produced results of marvelous immensity.

HISTORY OF THE CANYON.

Don Lopez de Cardenas, of Coronado’s expedition, discovered the Grand Canyon in 1540, as a result of stories told by the Hopi (Moquis) Indians to Don Pedro de Tovar. The old records describe a chasm which seemed to be more than 3 or 4 leagues across in an air line—"que auia mas de tres o quatro leguas por el ayre."

For a long period thereafter the Grand Canyon region and the Colorado River remained practically unknown. It is next recorded

\footnote{Furnished by courtesy of Frederick S. Dellenbaugh.}
as having been seen by two Spanish priests in 1776; Padre Garces crossing eastward from the lower Colorado to the Hopi towns, who halted, he says, "at the sight of the most profound caxones which ever onward continue, and within these flows the Colorado," and Padre Escalante, who, in searching for a place to cross from the north after his failure to proceed westward from Santa Fe to Monterey, finally found the old Ute ford, used by Indians for centuries, near the foot of Glen Canyon (in latitude 37°), and by means of it was able to reach Zuni. The ford then became known as *El Vado de los Padres*—the Crossing of the Fathers—for long the only known crossing of the Colorado in a distance of several hundred miles.

The first American to visit the region was James O. Pattie, accompanied by his father. They trapped beaver on the lower Colorado in 1825 and 1826. In 1826, returning eastward, they traveled for 13 days, following, apparently, the Grand Canyon as well as they could, but unable to reach the river at any point, till at last they arrived at a place where the river "emerges from these horrid mountains." This was the first extended trip on record of any human being along the brink of the Grand Canyon.

The same year that the Patties went to the lower Colorado, 1825, General Ashley, in pursuit of his fur-trading enterprise, attempted to descend Green River from near the present crossing of the Union Pacific Railway. They were forced after great hardship to give up the effort in the Uinta Valley.

The famous American trapper and pioneer, Jedediah Smith, crossed the river going west in the Mohave country in 1826 and again in 1827. In this latter year the Patties returned to the lower Colorado and trapped down the river from the mouth of the Gila in dugouts, the first navigators of this portion since Alarcon, of the Coronado expedition, came up in 1540. Quite unexpectedly they made the acquaintance of the great bore at the mouth of the river, where they were in waters that Lieutenant Hardy, of the British Navy, had entered the year before.

Other trappers after beaver then followed into the region, and the Government began sending out exploring parties. One of these under Sitgreaves crossed the Colorado in 1851 about 150 miles above Yuma, and three years later another under Whipple, surveying for a railway along the thirty-fifth parallel, crossed a few miles above the mouth of Bill Williams Fork.

When the California gold rush developed one trail of the Forty-niners led down the Gila and across the Colorado at its mouth, and now various activities on the lower river began. The first steamboat was brought to the mouth of the Colorado and up it in 1852. It was named the *Uncle Sam*. 
Edward F. Beale, surveying a Government wagon road, crossed and recrossed in 1857 and 1858, near the mouth of Bill Williams Fork, and in 1858, January, the Government exploring expedition under Lieutenant Ives proceeded from the mouth up the river in a small, stern-wheel, iron steamer, the *Explorer*, as far as the foot of Black Canyon, whence the ascent was continued in a small boat to the mouth of the Vegas Wash. This was not the first steamer up, however, as Captain Johnson of a commercial navigation company had steamed up and passed with his steamboat clear through Black Canyon to its head, some days before mainly to "get ahead" of Ives who had earlier displeased Johnson. Ives then proceeded overland to the mouth of Diamond Creek and to the Hopi towns via Havasu Canyon.

"It seems intended by nature," says Lieutenant Ives, after vainly trying to reach the rim, "that the Colorado River, along the greater part of its lonely and majestic way, shall be forever unvisited and undisturbed."

This same year of 1858, saw the first crossing on record of the Colorado from the north, since Esclante, by white men. This was accomplished by Jacob Hamblin, a well-known Mormon, a missionary and Indian agent, from Utah to the Hopi towns. An Indian guided him to the Ute ford (Crossing of the Fathers) and he used it thereafter almost yearly. These Mormons for long were the only persons besides Navajos and Utes to cross the river anywhere. The ford known to few was difficult and dangerous at all times and impossible except at low water.

In 1862 Hamblin went around the Grand Canyon by the west end to the Hopi towns and returned by the Crossing of the Fathers at the east end, practically, as Marble Canyon begins a few miles below. The next year he went again around by the west end to the Hopis, visiting the "hermit" tribe, the Havasupais, in their deep canyon home, on the way, the first white man on record to do so after Lieutenant Ives. The party returned to St. George around the west end of the Grand Canyon. Nobody, as yet, went to the rim and there was no known crossing of the Grand Canyon itself anywhere by white men.

Another attempt to descend Green River from the California Trail (near the present Union Pacific Railway) was made in 1849, by William Manly and party. They expected to find a shorter and easier road to the California gold fields. After a hard time they emerged into Uinta Valley where they met the noted Ute chief Wakar ("Walker") who was good to them and urged them not to try to go further down the river.

In 1867 a man named James White was picked up from a raft near Callville, below the mouth of the Virgin, in an exhausted condition, and those who aided him immediately but erroneously assumed that he had come down through the Grand Canyon, the result of an ignor-
ance as great on their part as on that of White. He knew nothing about the interior of the great canyon and mentioned that he had run one big rapid, whereas he should have mentioned big rapids by the dozen.

So nothing became definitely known about the mysterious interior of the Grand Canyon or of the canyons of the Colorado River above as far as the Uinta Valley on Green River until Maj. John Wesley Powell, one-armed veteran of the Civil War, made his famous passage of all the canyons. He started with nine men and four boats from Green River City, Wyo. (on the Union Pacific Railway, then the only railway across the continent), on May 24, 1869. One of the men left the party (Goodman), disheartened, in the Uinta Valley.

The terrifying waterfalls and underground passages described by trappers and Indians were not found, but the declivity was often extremely great and continuous (as in Cataract Canyon, where it is continuous for about 20 miles), producing violent cataracts, with huge waves and a water velocity of over 20 miles an hour, frequently studded with giant rocks.

The trip was one of incredible hardship and danger, led by the Major with his one left arm, the other having been lost at the Battle of Shiloh. The plunging rapids in the whole length of the journey numbered several hundred to overcome the 6,000 feet difference in altitude between Green River City and the sea. The boats were often upset and the passage of many of the rapids was perilous to a degree. Frequently the party would be forced to embark on long foaming declivities without being able to discover what other, perhaps greater, falls might lie around the precipitously walled bends in front of them.

One of the boats, some of the scientific instruments, and a considerable amount of the food supply were lost in the Canyon of Lodore; and some that was rescued had to be left, as the remaining boats were overloaded. For weeks the clothing of the adventurers was never dry; and when they finally entered the mighty depths of the Grand Canyon itself, in August, there was little food remaining.

The sharpest rapids occur in the granite, and the first Granite Gorge, running past the Powell Monument, contains the worst portion of the whole river. When, therefore, another "Granite Gorge" developed below Diamond Creek, the men, stalwart and full of nerve though they were, having become somewhat demoralized by lack of food and the tremendous strain, were disheartened. Three of them, consequently, announced that they would go no farther.

This was desertion, but they preferred it to risking the difficulties they saw ahead. They believed they could climb out and reach the well-known Mormon settlements on the north, and they believed a river party would be lost or starve.

"At one time," says Powell in his report, "I almost concluded to leave the river. But for years I have been contemplating this trip.
To leave the exploration unfinished, to say that there is a part of the canyon which I can not explore, having already almost accomplished it, is more than I am willing to acknowledge, and I determine to go on. * * * For the last time they entreat us not to go on, and tell us that it is madness to set out in this place." The same appeal that Dunn made to Hawkins, the cook of the party, as Hawkins himself tells it.

William R. Hawkins, writing of this in after years, says the three men had "made up their minds to go, and Dunn said he hated to leave Hall and myself, as we had been together a long time, and that we would perish in the river. [Note the fear of the river which had developed in the minds of at least three.] While we were talking, the major came up to me and laid his left arm [he had no right] across my neck, tears running down his cheeks. By that time the rest of the boys were present, and the major said to me: 'Bill, do you really mean what you say' [that he would stick to the major on the river]? I told him that I did, and he said that if he had one man that would stay with him that he would not abandon the river. I just simply said that he did not know his party.'"

He certainly had reason, with three men about to desert, to believe that others might. The other five were true, however, and it is only just to say that one of the deserters would have stood true, also, had it not been for his brother, who was determined to leave. They all then drank coffee together. The boat party went on, the deserters climbed out on the north, each party thinking the other party doomed. The deserters would have fared well enough and would have arrived at the Mormon settlements had it not been that the Shewits Indians on the plateau believed, or said later that they believed, that these were miners who had committed depredations on a tribe to the south. The men were therefore killed not far from Mount Dellenbaugh, and their clothing, rifles, etc., appropriated.

The place on the river where they left the major is now known as Separation Rapid. The day after they departed Powell and "the faithful five" reached the end of the great chasm without serious mishap. The names of the three deserters have justly been omitted from the roll of honor inscribed on the Powell Monument.

Powell's journal of this famous voyage is one of the most fascinating tales of adventure in literature. A large part of his meager notes having been lost, Powell repeated the trip on a more extensive basis in 1871 and 1872, obtaining then the data on which his report was based. There is no account of this second, vital expedition except in A Canyon Voyage, by Frederick S. Dellenbaugh, a member of that party. Afterwards Powell became director of the United States Geological Survey and of the Bureau of Ethnology, which he established.
The Grand Canyon is very much more than a wonder place or a scientific museum on a titanic scale. It is a pleasure resort of the first order. It may be visited any day in the year. The railroad is always running and the hotel always open. When most other resorts are closed the Grand Canyon is easily accessible.

During the winter snow falls in the pine forest along the rim; and though the upper portions are snow covered, the trails into the canyon are open and safe; the floor of the canyon is warm and comfortable the year around. When nipping frosts redden cheeks on the rim, the most fragile flowers are blooming in the canyon.

The weather in July and August is warm but not hot on the rim; the altitude takes care of that. There are cool mornings, evenings, and nights no matter how warm it may be at midday.

Arizona is a land of sunshine; the air is dry and the winds are light. While spring and fall are more attractive than midsummer or midwinter, all the seasons have each its special charm. From December to March snow is more or less abundant on the rim and a few hundred feet down the trail. Camping-out parties must then confine themselves to the canyon.

The views from the north rim are markedly different. One there views close at hand the vast temples which form the background of the south rim view. One looks down upon them, and beyond them at the distant canyon floor and its gaping gorge which hides the river; and beyond these the south rim rises like a great streaked flat wall, and beyond that again, miles away, the dim blue San Francisco Peaks. It is certainly a spectacle full of sublimity and charm. There are those who, having seen both, consider it the greater. One of these was Dutton, whose description of the view from Point Sublime has become a classic. But there are many strenuous advocates of the superiority of the south rim view, which displays close at hand the detail of the mighty chasm of the Colorado, and views the monster temples at parade, far enough away to see them in full perspective.

The trail trip to the north rim is now perfectly feasible by the completion of the Kaibab suspension bridge over the Colorado River and the extensive repairs on the Kaibab Trail up Bright Angel Canyon. It is about 32 miles from Grand Canyon to the Wylie...
Way Camp on Bright Angel Point. About 12 miles are made the first day, stopping overnight at Phantom Ranch; the remaining 20 miles are covered the second day.

Auto transportation and rates for reaching this side of the park from the north are given on page 57.

DERIVATION OF NAMES USED ON GRAND CANYON MAPS.

While some of them are purely descriptive, many commemorate scientists, explorers, Indian tribes, leaders of religion, mythologic and romantic personages. Aztec and Indian terms occur and the origin of a few names is unknown.

Alarcon Terrace.—Spanish navigator, first to ascend the Colorado River.
Apache Point.—Name of a large Indian tribe of Arizona and New Mexico region which was untiring in raiding and depredating both Pueblos and whites.
Apollo Temple.—The son of Jupiter and brother of Diana, god of the sun in Roman and Greek mythology.
Awatubi Crest.—Awatubi, village of the Hopi Indians on the Painted Desert, destroyed in 1770.
Aztec Amphitheatre.—General name for all Nahua tribes in Mexico at time of Cortez.
Bass Camp.—Owned by one of the pioneer settlers.
Brahma Temple.—In the Hindu triad Brahma was the evolver of the universe, Vishnu the redeemer, Siva or Shiva the destroyer.
Buddha Temple.—The title of Siddhartha, founder of Buddhism in fifth century B.C.

Cardenas Butte.—Member of Coronado's party and the first white man to see the Grand Canyon.

Castor Temple.—Castor and Pollux were inseparable brothers in Greek mythology.

Centocot Point.—Probably an Aztec deity.

Chemuhuevi Point.—The southernmost of the Pinto Tribe in Lower California.

Cheop's Pyramid.—An Egyptian king of the fourth dynasty, builder of the famous pyramid at Gizeh.

Chuar Butte and Creek.—Name of Indian chief.

Cocepa Point.—A tribe of Yuma Indians living on the Colorado River.

Coconino Plateau.—A name sometimes used for the Havasupai, who originally occupied much of the Arizona Plateau.

Comanche Point.—Plains Indians from farther east, whose raids were greatly feared by the Pueblos.

Confucius Temple.—The Chinese philosopher who taught practical morality. Lived in fourth century B.C.

Conquistador Aisle.—Spanish for "conqueror." The conquistadores were especially the members of Coronado's expedition.

Cope Butte.—E. D. Cope, 1840-1897. A great American naturalist, specializing in fossil animals.

Coronado Butte.—In 1540 Coronado led the great Spanish expedition that penetrated as far as Kansas.

Dana Butte.—James D. Dana, 1813-1895. Noted professor of geology at Yale for many years.

Deva Temple.—Divine epithet, applied commonly to goddess Durga, wife of Shiva of the Hindu triad.

De Vaca Terrace.—Cabeza De Vaca was shipwrecked on the Gulf coast and wandered for eight years among Indians before reaching a Spanish settlement.

Diana Temple.—Roman goddess of the moon, sister to Apollo and daughter of Jupiter.

Drummond Plateau.—Henry Drummond, 1851-1897. A famous Scottish religious writer.

Dutton Point.—Maj. C. E. Dutton, United States Army, who wrote for the Government a monograph on the Grand Canyon.

Elaine Castle.—The lily maid of Astolat in Tennyson's poem, "The Idylls of the King."

Escalante Butte.—A Spanish missionary; the first white man to cross the Green and the Colorado, in 1775.

Excalibur.—The magical sword of King Arthur of the Round Table.

Fiske Butte.—John Fiske, 1842-1901. American philosopher.

Freya Castle.—In Scandinavian mythology Freya is the goddess of love and womanly goodness.

Galalahad Castle.—The purest knight of the Round Table, featured in "The Idylls of the King."

Garces Terrace.—A Franciscan who journeyed to the Hopi country in 1776.

Gawain Abyss.—Gawain the courteous, one of the principal knights of the Round Table.

Geikie Peak.—Sir Archibald Geikie, many years director British Geological Survey.

Guinevere Castle.—The wife of King Arthur of the Round Table.

Gunther Castle.—The Burgundian king of the Nibelungen epic, husband of Brunhilde.

Hance Creek.—John Hance, a local character and pioneer.

Havasupai Point.—This tribe, formerly occupying Arizona Plateau, now live in Havasu Canyon about 60 miles from El Tovar.
Holy Grail Temple.—The cup used at the Last Supper, which the order of the Round Table was instituted to protect.

Horus, Temple of.—In Egyptian mythology the son of Osiris and Isis, principal deities.

Hopi Point.—The Hopis, sometimes called the Moquis, have maintained villages overlooking the Painted Desert since long before the Spanish invasion of 1540.

Mount Huethewali.—Indian word for observation point.

Huxley Terrace.—Famous English biologist, 1823-1895.

Isis Temple.—Principal female deity of Egypt, wife of Osiris, mother of Horus, and sometimes called “the daughter of Ra.”

Ives' Point.—Lieut. Joseph C. Ives, United States Army, the leader of Colorado River exploration, 1857 and 1858.

Jicarillo Point.—An Apache Tribe of northeastern New Mexico, cruel raiders.

Juno Temple.—Wife and sister of Jupiter, queen of heaven in Roman mythology.

Jupiter Temple.—The supreme deity of the Romans.

Kaibab Plateau.—Pinto word meaning mountain lying down.

King Crest.—Clarence King was the first director of the United States Geologica Survey.

King Arthur Castle.—A British chieftain of the sixth century who with his knights of the Round Table has inspired romances galore.

Krishna Shrine.—In Hindu mythology Krishna is the name of the eighth of the ten incarnations of the supreme god Vishnu. The ninth was in the form of Buddha; the tenth is still to come.

Kwagunt Butte and Creek.—Pai Ute Indian with Major Powell on travels on the North Rim.

Lancelot Point.—A knight of the Round Table, featured in Tennyson's poem, "The Idylls of the King."

Leconte Plateau.—Joseph LeConte was professor of geology in the University of California for over 30 years; died 1901.

Lipan Point.—An Apache Tribe.

Lyell Butte.—Sir Charles Lyell was a famous English geologist.

Manu Temple.—A Sanskrit word meaning “man,” one of 14 demiurgic beings each of whom presided over a period of race progression. Manu Vaivasvata, the sun-born, is the manu of the present race of beings.

Marcos Terrace.—Fray Marcos de Niza led the first expedition into our country from Mexico in 1539 as far as Zuni. His accounts inspired Coronado’s exploration.

Maricopa Point.—A tribe of Yuma Indians who moved from Colorado River to join the Pimas.

Marsh Butte.—O. C. Marsh, the paleontologist, who made a specialty of extinct animals.

Mencius Temple.—The Latin name of the Chinese philosopher, Meng, an early Confucian.

Merlin Abyss.—A semilegendary character of the fifth century who figures in Tennyson’s “Idylls of the King.”

Mescalero Point.—An Apache Tribe that roamed principally in New Mexico.

Mimbreno Point.—An Apache Tribe taking its name from the Mimbres Mountains in New Mexico.

Modred Abyss.—The treacherous nephew of King Arthur, King of the Round Table.

Mohave Point.—A Yuma Tribe living in vicinity of Needles, Calif.

Montezuma Point.—Montezuma, 1479-1520, ruled the Aztecs at the time of the Spanish conquest. He was regarded by later Indians as a deity.

Moran Point.—The artist who was with Major Powell, sketching the Colorado River country in 1873.

Natchi Point.—A noted Apache warrior.
Navajo Point.—Nomadic Indians of the plateau region who maintained a long warfare against Pueblos and whites.

Newberry Point and Butte.—J. S. Newberry, geologist with Ives’ expedition to the canyon. Long-time professor Columbia College, New York City.

Newton Butte.—Sir Isaac Newton, 1642-1727, famous English physicist who discovered law of gravitation.

O’Neill Butte.—Arizona politician, once governor.

Osiris.—Chief Egyptian deity of good, the principle of good closely associated with Ra.

Papago Point.—A branch tribe of Pima Indians of southern Arizona region.

Pima Point.—Popular name of tribes living in the valleys of Gila and Salt Rivers, Ariz.

Pinal Point.—An Apache tribe.

Piute Point.—A name applied to many Shoshonean Tribes, but perhaps properly only to those living in southwestern Utah.

Pollux Temple.—The devoted brother of Castor, in the Greek legends.

Powell Plateau.—Major J. W. Powell made the first expedition down the Colorado River in 1869. Subsequently director of the United States Geological Survey and the Bureau of Ethnology.

Quetzal Point.—An Aztec word signifying a bird of iridescence.

Ra, Tower of.—The Egyptian sun god, type of supreme deity, always victorious.

Rana Shrine.—Hindu word for prince.

Scylla Butte.—The promontory at the entrance of the strait between Italy and Sicily, around which ancient mariners feared to go.

Set, Tower of.—The brother or son of Osiris and his deadly enemy in Hindu mythology.

Sheba Plateau.—An American geologist, long-time professor at Harvard University.

Shiva Temple.—The avenging associate of Brahma and Vishnu in ruling the universe, now the most popular Hindu god.

Shinumo Creek.—Name applied by Powell to the Hopi confederacy.

Shykotan Butte.—The promontory at the entrance of the strait between Italy and Sicily, around which ancient mariners feared to go.

Sicily, Mount.—Judge Sinclair, Indian chief, born 1853, has always resided on the Havasupai Indian Reservation. Living in 1923.

Solomon Temple.—Solomon, 1033-975 B.C., son of David and Bathsheba, king of the Jews.

Spencer Terrace.—Herbert Spencer, 1820-1903, a distinguished English philosopher.

Supai Formation.—The colloquial name of the Havasupai, a small tribe now occupying Havasu Canyon.

Tikir Point.—A H. Thompson, brother-in-law of Major Powell, who accompanied him in his famous boat trip down the canyon.

Thor Temple.—Second principal Norse deity, god of thunder, son of Odin the supreme being, and Jorah, the earth.

Tiyo Point.—Indian name.

Tovar Terrace.—Pedro de Tovar was sent by Coronado in 1540 to inspect the Hopi villages where he learned of the existence of the Grand Canyon.

Toltec Point.—The Toltecs were either an early tribe of the Aztecs or a people that preceded them on the Mexican Plateau.

Tonto Platform.—Spanish word “fool” applied to Indians of Arizona plateau, especially to the Apache Mohave.

Topocobya Trail.—A Havasupai word, “To-po-co-bah,” meaning “where the water comes down.”

Tyndall Dome.—John Tyndall, 1820-1893, a famous British physicist.

Unkar Creek.—A Pai Ute word, meaning “red creek.”

Venus, Temple of.—The Roman goddess of beauty and love.
Vesta, Temple of.—The Roman goddess of the hearth in whose honor the Vestal Virgins kept the symbolic fire burning.

Vishnu Temple and Creek.—In Hindu mythology the associate of Brahma and Shiva who was the redeemer of the universe.

Walhalla Plateau.—The great hall of the Scandinavian gods, the warriors’ heaven of the Vikings.

Wallace Butte.—An English explorer and naturalist and authority on natural selection.

Wheeler Point.—Gen. George M. Wheeler, United States Army, in charge of surveys west of one-hundredth meridian in 1872-1879.

Yaki Point.—Probably a version of the name of the Yaquis, the unconquerable tribe of northwestern Mexico.

Yavapai Point.—These Indians are commonly known as the Apache Mohave, formerly roaming central Arizona.

Yuma Point.—Great family of Indians of several tribes in lower Colorado region. Called themselves Kwichana.

Zoroaster Temple.—Founder of the ancient religion now represented by the Guebers and Parsees of Persia and India.

Zuni Point.—The Zuni pueblo south of Gallup, N. Mex., is the remnant of the historic Seven Cities of Cibola.

LIST OF BIRDS.

The following incomplete list of birds has been seen in and on the rim of Grand Canyon:

Western bluebird .......................................................... Sialia mexicana occidentalis.
Western robin ............................................................... Merula migratoria propinquua.
Mountain chickadee ....................................................... Parus gambeli.
Gray titmouse ............................................................... Baeolophus inornatus griseus.
Pygmy nuthatch ............................................................. Sitta pygmaea pygmaea.
Slender-billed titmouse .................................................. Sitta carolinensis aculeata.
Canyon wren ................................................................. Catherpes mexicanus conspersus.
Water ouzel ................................................................. Cinclus mexicanus.
Black-throated gray warbler ........................................... Dendroica nigrescens.
Audubon warbler ........................................................... Dendroica auduboni auduboni.
Northern green swallow ................................................ Tachycineta thalassina lepida.
Black-headed grosbeak .................................................. Zamelodia melanophala.
Spurred towhee ............................................................. Pipilo maculatus montanus.
Desert sparrow ............................................................. Amphispiza bilineata deserticola.
Red-backed junco .......................................................... Junco phaeonotus dorsalis.
Western chipping sparrow ................................................ Spizella socialis arizonae.
English sparrow ............................................................. Passer domesticus.
Green-backed goldfinch ................................................ Aisrgalines pes aultria hesperophilus.
House finch ................................................................. Carpodacus mexicanus frontalis.
Piñon jay ..................................................................... Cyanoccephalus cyanoccephalus.
Woodhouse jay ............................................................. Aphelocoma woodhousei.
Long-crested jay ........................................................... Cyanocitta stelleri diademata.
Western flycatcher ......................................................... Empidonax difficilis difficilis.
Olive-sided flycatcher ................................................... Nuttallornis borealis.
Broad-tailed humming bird ............................................ Selasphorus platycercus.
Red-shafted flicker ....................................................... Colaptes cafer collaris.
White-breasted woodpecker ............................................ Dryobates villosus leucothorax.
Turkey vulture .............................................................. Cathartes aura septentrionalis.
Western mourning dove .................................................. Zenaidura macroura marginella.
HOW LONG TO STAY.

Time required.—While one ought to remain a week or two, a stopover of three or four days from the transcontinental trip will be quite satisfactory. The Hermit Loop overnight trip, down one trail and up another, requires two days and a night, or more time may be taken and include Phantom Ranch. One day should be devoted to an auto ride along the Hermit Rim Road, and by auto to Grand View and Desert View. Another day go down Bright Angel Trail and back. A fourth day spent in short walks to nearby points or on horseback, will enable visitors to get more intimate views.

The several trips mentioned above are all well worth while, and the high plateau above the rim affords many delightful horseback or hiking trips. Visitors to the North Rim may well spend as much time as can be spared.

The National Park Service of the Department of the Interior recommends to the traveling public that stopovers of as long duration as practicable be planned at points within the park; that Grand Canyon National Park be regarded not alone as a region which may be glimpsed on a hurried trip, but also as a vacation playground for rest and recreation.

WHAT TO WEAR.

If much tramping is done, stout, thick, hobnailed shoes should be provided. Ladies will find that short walking skirts are a convenience; riding trousers are preferable, but not essential, for the horseback journey down the zigzag trails. Traveling caps and (in summer) broad-brimmed straw hats are useful adjuncts. Otherwise ordinary clothing will suffice. Riding trousers, divided skirts, and straw hats may be rented at El Tovar Hotel.

ADMINISTRATION.

Grand Canyon National Park is under the jurisdiction of the Director, National Park Service, Department of the Interior, Washington, D. C. The park superintendent, Mr. W. W. Crosby, is located at Grand Canyon, Ariz., and information, maps, and pamphlets may be obtained at the office, where visitors are cordially welcomed. The office of the superintendent is 100 yards east of the Grand Canyon Railway.

The park, El Tovar Hotel, the Bright Angel cottages, and the cabins at Hermit Creek and Phantom Ranch at the mouth of Bright Angel Creek are always open.
HOW TO REACH THE PARK.

BY RAIL.

The Grand Canyon National Park is directly reached by a branch line of the Atchison, Topeka & Santa Fe Railway extending 64 miles northward from Williams, Ariz. On certain trains through standard sleeping cars are operated to and from Grand Canyon station. Passengers using other trains and stopping over at Williams will find adequate accommodations at the Fray Marcos, station hotel.

Stop-overs, not to exceed 10 days, are granted at Williams on all classes of railroad tickets for a visit to the canyon. Limits of through
railroad tickets will be extended if necessary by agent at Grand Canyon. Through tickets may include side-trip coupons, Williams to Grand Canyon and return, at an additional charge of $9.12.

Round-trip excursion tickets at reduced fares are on sale daily at practically all stations in the United States and Canada to Grand Canyon as a destination.

Baggage may be checked through to Grand Canyon station, if required. Passengers making brief side trips to Grand Canyon may check baggage to Williams only or through to destination. Certain regulations for free storage of baggage for Grand Canyon passengers are in effect.

For further information regarding railroad fares, service, etc., apply to railroad ticket agents, or address:

W. J. Black, passenger traffic manager, Atchison, Topeka & Santa Fe Railway system, Chicago, Ill.

J. J. Byrne, assistant passenger traffic manager, Atchison, Topeka & Santa Fe Railway system, Los Angeles, Calif.

BY AUTOMOBILE.

Automobile tourists may leave the main east and west highway through Arizona at Maine.

Flagstaff.—It is about 84 miles from Grand Canyon to Flagstaff, via Williams Road ranger station, south entrance. Rain Tank, Red Butte Mortz Lake, and Maine, Ariz., over a main traveled road, on which a good run is possible most of the year. At times in late fall or early spring it is advisable to inquire at Williams or Flagstaff as to condition of the road. The round trip requires about two days.

This is a very enjoyable drive through pine forests and across green mesas partly along the old-time stage route to the canyon. The town of Flagstaff is located in the heart of the San Francisco uplift. There are good stores and garage facilities in Flagstaff. In this vicinity are prehistoric cliff dwellings, extinct craters, volcanic cones, lava beds, and ice caves. The summit of Humphreys Peak, one of the peaks forming the San Francisco Mountains, is 12,750 feet above sea level.

Williams.—Williams is 34 miles west of Flagstaff and 15 miles west of Maine, on the main east and west highway through Arizona. It is the nearest shopping center and its stores and garages carry a good stock of everything necessary to the automobile tourist.

The route from Williams passes Bill Williams Mountain, elevation 9,264 feet, which has seven distinct crests, Red Lake, Howard Lake, and Anita, running along the line of the Grand Canyon Railway. No supplies can be purchased between Williams or Maine and Grand Canyon.
At Grand Canyon village is an excellent garage under the management of Fred Harvey. Storage, or repair service, as well as gasoline and oil, may be procured here.

The Babbitt-Polson Co.'s general store at Grand Canyon carries a full line of groceries and campers' supplies.

A supply of water for drinking purposes and for radiation, sufficient to last to Grand Canyon, should be brought from Williams or Flagstaff. Campers may obtain water from the railroad station agent at Grand Canyon.
PUBLIC UTILITIES AND CONVENIENCES.

POST OFFICE.

The post office (third class), which does all kinds of postal business, is situated near the Hermit Rim Road about 400 yards west of the railroad depot. It is open from 8 a.m. to 6 p.m. Mail trains arrive at 8.20 a.m. and 3.55 p.m. and leave at 8.20 a.m. and 7.25 p.m.

TELEGRAPH.

The Western Union offices at the railroad depot and El Tovar Hotel are open for all business from 7.30 a.m. to 8 p.m.

TELEPHONE.

There is telephone connection between El Tovar Hotel, National Park Service Office, ranger stations, Hermit Cabins, and Phantom Ranch. There is no telephone connection to points outside of the park at present, but it is expected that a long-distance service will be installed early in 1923.

NATIONAL PARK SERVICE STATIONS.

There are ranger stations or camps where assistance and shelter may in emergency be obtained at places here named. These may be unoccupied, and it is well to inquire at the office of the superintendent:

Hermit Basin, Cottonwood Camp, up Bright Angel Creek on north side of Colorado River; Pipe Creek, on Tonto Trail 2 miles east of Indian Garden; Salt Creek, on Tonto Trail 5 miles west of Indian Garden; Grand View Public Camp; Rowe Well; North Rim; and Grand Canyon.

MEDICAL SERVICE.

There is a doctor of long experience in the park and a trained nurse at El Tovar Hotel. The nearest hospital is at Williams, Ariz. There is a hospital at Flagstaff, Ariz.

PETRIFIED FOREST NATIONAL MONUMENT.

Tourists visiting Grand Canyon National Park either by rail or by automobile should plan a stopover at the Petrified Forest National Monument.

There are three groups of petrified trees in this reservation. The first forest lies 6 miles south of Adamana, Ariz., a station on the main line of the Atchison, Topeka & Santa Fe Railway, and the
second forest is 2½ miles south of it. The third or Rainbow forest lies 13 miles south of Adamana and 18 miles southeast of Holbrook, Ariz. It is best to approach the third forest from Holbrook; the other two are best reached from Adamana.

This area is of great interest because of the abundance of petrified coniferous trees which lie scattered about in great profusion. None are standing as in the Yellowstone National Park. These trees probably at one time grew beside an inland sea; after falling they became water-logged and during the decomposition the cell structure was entirely replaced by silica derived from sandstone in the surrounding land. Over a greater part of the entire area trees are scattered in all conceivable positions and in fragments of all sizes.

In the first forest may be seen the well-known natural bridge, consisting of a large petrified tree trunk 60 feet long spanning a canyon 45 feet wide, and forming a foot bridge over which anyone may easily pass. The trunks in the Rainbow forest are larger than elsewhere, more numerous and less broken. Several hundred entire trees are found here, some of which are more than 200 feet long. The color of the wood is deeper and more striking than in the other localities.

"There is no other petrified forest," says Prof. Lester F. Ward, "in which the wood assumes so many varied and interesting forms and colors, and it is these that present the chief attraction for the general public. The state of mineralization in which much of this wood exists almost places them among the gems or precious stones. Not only are chalcedony, opals, and agates found among them, but many approach the condition of jasper and onyx. The degree of hardness attained by them is such that they are said to make an excellent quality of emery."

ADMINISTRATION.

Petrified Forest National Monument is under the jurisdiction of the Director, National Park Service, Department of the Interior, Washington, D.C. The custodian is located in the monument.

COSTS OF TRIPS AND HOTEL ACCOMMODATIONS.

Adamana is a small place, consisting chiefly of hotel, post office, railway station, and a small store (does not handle films or other camera supplies). The Forest Hotel has electric lights, sanitary plumbing, with hot and cold water. Rates: $5 to $5.50 per day, American plan; meals $1 each; 35 guests can be accommodated; in summer, tent houses also are provided for guests.

From Adamana the following auto trips are made: (1) To the First and Second Forests and the Natural Bridge; (2) to the Third
GRAND CANYON NATIONAL PARK.

Forest; (3) to the Blue Forest; (4) to the Painted Desert and the North Sigillaria Forest.

AUTHORIZED RATES.

The round-trip fare on either of the above trips is: $5 for one person, $3 per capita for two persons, and $2.50 per capita for three or more. About one-half day is allotted to each trip, although three trips can be made in a day. For a one-day stop-over the trips numbered 1 and 4 are perhaps best suited to give the widest variety in sight-seeing at this place.

Holbrook, the county seat of Navajo County, has satisfactory hotel accommodations, with prices about the same as at Adamana. The Petrified Forest may be visited from Adamana any day in the year, except when high waters make the streams temporarily impassable.

STOP-OVER ARRANGEMENTS.

Stop-overs are allowed at Adamana, not to exceed 10 days, on all one-way railroad tickets, also on round-trip railroad tickets within their limits.

To obtain stop-overs on one-way railroad tickets, notify train conductor and deposit tickets with agent immediately after arrival; on round-trip tickets notify train conductors.

RULES AND REGULATIONS.

(Approved February 20, 1922, to continue in force and effect until otherwise directed by the Secretary of the Interior.)

GENERAL REGULATIONS.

The following rules and regulations for the government of the Grand Canyon National Park are hereby established and made public pursuant to authority conferred by the act of Congress approved August 25, 1916 (39 Stat. 536), as amended June 2, 1920 (41 Stat. 732), and the act of February 26, 1919 (40 Stat. 1175):

1. Preservation of natural features and curiosities.—The destruction, injury, defacement, or disturbance in any way of the public buildings, signs, equipment, or other property, or the trees, flowers, vegetation, rocks, mineral, animal, or bird, or other life is prohibited: Provided, That flowers may be gathered in small quantities when, in the judgment of the superintendent, their removal will not impair the beauty of the park.

2. Camping.—No camp shall be made along roads except at designated localities. Blankets, clothing, hammocks, or any other article likely to frighten teams shall not be hung near the road.

Many successive parties camp on the same sites during the season; therefore camp grounds shall be thoroughly cleaned before they are abandoned. Tin cans, bottles, cast-off clothing, and all other débris shall be placed in garbage cans or pits provided for the purpose.
When camps are made in unfrequented localities where pits or cans may not be provided, all refuse shall be burned or hidden where it will not be offensive to the eye.

Campers may use dead or fallen timber only for fuel.

3. **Fires.**—Fires constitute one of the greatest perils to the park; they shall not be kindled near trees, deadwood, moss, dry leaves, forest mold, or other vegetable refuse, but in some open space on rocks or earth. Should camp be made in a locality where no such open space exists or is provided, the deadwood, moss, dry leaves, etc., shall be scrapped away to the rock or earth over an area considerably larger than that required for the fire.

Fires shall be lighted only when necessary and when no longer needed shall be completely extinguished, and all embers and beds smothered with earth or water, so that there remains no possibility of reignition.

Especial care shall be taken that no lighted match, cigar, or cigarette is dropped in any grass, twigs, leaves, or tree mold.

4. **Hunting.**—The park is a sanctuary for wild life of every sort, and hunting, killing, wounding, capturing, or frightening any bird or animal in the park, except dangerous animals when it is necessary to prevent them from destroying life or inflicting injury, is prohibited.

The outfits, including guns, traps, teams, horses, or means of transportation used by persons engaged in hunting, killing, trapping, ensnaring, or capturing birds or wild animals, or in possession of game killed on the park lands under circumstances other than prescribed above, shall be taken up by the superintendent and held subject to the order of the Director of the National Park Service, except in cases where it is shown by satisfactory evidence that the outfit is not the property of the person or persons violating this regulation and the actual owner was not a party to such violation. Firearms are prohibited in the park except on written permission of the superintendent. Visitors entering or traveling through the park to places beyond shall at entrance report and surrender all firearms, traps, nets, seines, or explosives in their possession to the first park officer and in proper cases may obtain his written leave to carry them through the park sealed. The Government assumes no responsibilities for loss or damage to any firearms, traps, nets, seines, or other property so surrendered to any park officer, nor are park officers authorized to accept the responsibility of custody of any property for the convenience of visitors.

5. **Fishing.**—Fishing with nets, seines, traps, or by the use of drugs or explosives, or in any other way than with hook and line, or for merchandise or profit, is prohibited. Fishing in particular water may be suspended, or the number of fish that may be taken by one person in any one day from the various streams or lakes may be regu-
lated by the superintendent. All fish hooked less than 6 inches long shall be carefully handled with moist hands and returned at once to the water if not seriously injured. Fish retained shall be killed. Twenty fish shall constitute the limit for a day's catch, provided that no more than 20 pounds of trout, bass, crappie, or catfish may be taken in any one day.

6. **Private operations.**—No person, firm, or corporation shall reside permanently, engage in any business, or erect buildings in the park without permission in writing from the Director of the National Park Service, Washington, D. C. Applications for such permission may be addressed to the Director or to the superintendent of the park. Permission to operate a moving-picture camera must be secured from the superintendent of the park.

7. **Gambling.**—Gambling in any form, or the operation of gambling devices, whether for merchandise or otherwise, is prohibited.

8. **Advertisements.**—Private notices or advertisements shall not be posted or displayed on Government lands within the park, excepting such as the superintendent deems necessary for the convenience and guidance of the public.

9. **Mining.**—The location of mining claims on Government lands in the park is permitted only with the prior approval of the Secretary of the Interior.

10. **Patented lands.**—Owners of patented lands within the park limits are entitled to the full use and enjoyment thereof; the boundaries of such lands, however, shall be determined and marked and defined so that they may be readily distinguished from the park lands. While no limitations or conditions are imposed upon the use of private lands so long as such use does not interfere with or injure the park, private owners shall provide against trespass by their live stock upon the park lands, and all trespasses committed will be punished to the full extent of the law. Stock may be taken over the park lands to patented private lands with the written permission and under the supervision of the superintendent, but such permission and supervision are not required when access to such private lands is had wholly over roads or lands not owned or controlled by the United States.

11. **Grazing.**—The running at large, herding, or grazing of live stock of any kind on the Government lands in the park, as well as the driving of live stock over same, is prohibited, except where authority therefor has been granted by the superintendent. Live stock found improperly on the park lands may be impounded and held until claimed by the owner and the trespass adjusted.

12. **Authorized operators.**—All persons, firms, or corporations holding franchises in the park shall keep the grounds used by them properly policed and shall maintain the premises in a sanitary con-
dition to the satisfaction of the superintendent. No operator shall retain in his employment a person whose presence in the park may be deemed by the superintendent subversive of good order and management of the park.

All operators shall require each of their employees to wear a metal badge, with a number thereon, or other mark of identification, the name and the number corresponding therewith, or the identification mark, being registered in the superintendent's office. These badges must be worn in plain sight on the hat or cap.

13. Dogs and cats.—Cats are not permitted on the Government lands in the park and dogs only to those persons passing through the park to the territory beyond, in which instances they shall be kept tied while crossing the park.

14. Dead animals.—All domestic and grazed animals that may die in the park at any tourist camp or along any of the public thoroughfares shall be buried immediately by the owner or person having charge of such animals at least 2 feet beneath the ground, and in no case less than one-fourth mile from any camp or thoroughfare.

15. Travel on trails.—Pedestrians on trails, when saddle or pack animals are passing them, shall remain quiet until the animals have passed.

Persons traveling on the trails of the park either on foot or on saddle animals shall not make short cuts but shall confine themselves to the main trails.

16. Travel—general.—(a) Saddle horses, pack trains, and horse-drawn vehicles have right of way over motor-propelled vehicles at all times.

(b) On sidehill grades throughout the park motor-driven vehicles shall take the outer side of the road when meeting or passing vehicles of any kind drawn by animals; likewise, freight, baggage, and heavy camping outfits shall take the outer side of the road on sidehill grades when meeting or passing passenger vehicles drawn by animals.

(c) Load and vehicle weight limitations shall be those prescribed from time to time by the Director of the National Park Service and shall be complied with by the operators of all vehicles using the park roads. Schedules showing weight limitations for different roads in the park may be seen at the office of the superintendent and at the ranger stations at the park entrances.

(d) All vehicles shall be equipped with lights for night travel. At least one light shall be carried on the left front side of horse-drawn vehicles, in a position such as to be visible from both front and rear.

17. Miscellaneous.—(a) Campers and others shall not wash clothing or cooking utensils in the waters of the park, or in any way pollute them, or bathe in any of the streams near the regularly traveled thoroughfares in the park without suitable bathing clothes.
(b) Stock shall not be tied so as to permit their entering any of the streams of the park. All animals shall be kept a sufficient distance from camping grounds in order not to litter the ground and make unfit for use the area which may be used later as tent sites.

(c) Campers and all others, save those holding licenses from the Director of the National Park Service, are prohibited from hiring their horses, trappings, or vehicles to tourists or visitors in the park.

(d) All complaints by tourists and others as to service, etc., rendered in the park should be made to the superintendent in writing before the complainant leaves the park. Oral complaints will be heard daily during office hours.

18. Fines and penalties.—Persons who render themselves obnoxious by disorderly conduct or bad behavior shall be subjected to the punishment hereinafter prescribed for violation of the foregoing regulations and may be summarily removed from the park by the superintendent and not allowed to return without permission in writing from the Director of the National Park Service or the superintendent of the park.

Any person who violates any of the foregoing regulations shall be deemed guilty of a misdemeanor and shall be subject to a fine of not more than $500 or imprisonment not exceeding six months, or both, and be adjudged to pay all costs of the proceedings.

AUTOMOBILE AND MOTORCYCLE REGULATIONS.

Pursuant to authority conferred by the act of Congress approved August 25, 1916 (39 Stat. 535), as amended June 2, 1920 (41 Stat. 732), and the act of February 26, 1919 (40 Stat. 1175), the following regulations covering the admission of automobiles and motorcycles into the Grand Canyon National Park are hereby established and made public:

1. Entrances and roads.—Automobiles and motorcycles may enter and leave the park by, and travel over, any of the roads therein which are open to motor vehicles.

   Careful driving is demanded of all persons using the roads. The Government is in no way responsible for any kind of accident.

2. Motorcycles.—Motorcycles are admitted to the park under the same conditions as automobiles and are subject to the same regulations as far as they are applicable. Automobiles and horse-drawn vehicles shall have the right of way over motorcycles.

3. Motor trucks.—Motor trucks may enter the park subject to the weight limitations prescribed by the Director of the National Park Service. Schedules showing prescribed weight limitations for motor trucks may be seen at the office of the superintendent and at the ranger stations at the park entrances.
4. *Hours.*—Automobiles shall not enter or leave the park or use the park roads before 5.30 a. m. or after 10.30 p. m. except in case of emergency.

5. *Intoxication.*—No person who is under the influence of intoxicating liquor, and no person who is addicted to the use of narcotic drugs, shall operate or drive a motor vehicle of any kind on the park roads.

6. *Distance apart; gears and brakes.*—Automobiles while in motion shall be not less than 50 yards apart, except for purpose of passing, which is permissible only on comparatively level stretches of roads or on slight grades. All automobiles, except while shifting gears, shall retain their gears constantly enmeshed. The driver of each automobile may be required to satisfy park officers that all parts of his machine, particularly the brakes and tires, are in first-class working order and capable of making the trip, and that there is sufficient gasoline in the tank to reach the next place where it may be obtained. The automobile shall carry at least one extra tire. Motorcycles not equipped with brakes in good working order are not permitted to enter the park.

7. *Speeds.*—Speed is limited to 12 miles per hour on grades and when rounding sharp curves. On straight open stretches when no vehicle is nearer than 200 yards the speed may be increased to 20 miles per hour.

8. *Horns.*—The horn shall be sounded on approaching curves or stretches of road concealed for any considerable distance by slopes, overhanging trees, or other obstacles, and before meeting or passing other automobiles, motorcycles, riding or driving animals, or pedestrians.

9. *Lights.*—All automobiles shall be equipped with head and tail lights, the headlights to be of sufficient brilliancy to insure safety in driving at night, and all lights shall be kept lighted after sunset when automobile is on the road. Headlights shall be dimmed when meeting other automobiles, motorcycles, riding or driving animals, or pedestrians.

10. *Muffler cut-outs.*—Muffler cut-outs shall be closed while approaching or passing riding horses, horse-drawn vehicles, hotels, camps, or checking stations.

11. *Teams.*—When teams, saddle horses, or pack trains approach, automobiles shall take the outer edge of the roadway regardless of the direction in which it may be going, taking care that sufficient room is left on the inside for the passage of vehicles and animals. Teams have the right of way, and automobiles shall be backed or otherwise handled as may be necessary so as to enable teams to pass with safety. In no case shall automobiles pass animals on the road at a speed greater than 8 miles an hour.
12. Overlapping vehicles.—Any vehicle traveling slowly upon any of the park roads shall, when overtaken by a faster-moving motor vehicle and upon suitable signal from such overtaking vehicle, give way to the right, in case of motor-driven vehicles, and to the inside, or bank side of the road, in case of horse-drawn vehicles, allowing the overtaking vehicle reasonably free passage, provided the overtaking vehicle does not exceed the speed limits specified for the road in question.

When automobiles, going in opposite directions, meet on a grade, the ascending machine has right of way, and the descending machine shall be backed or otherwise handled as may be necessary to enable the ascending machine to pass with safety.

13. Accidents, stop-overs.—If, because of accident or stop for any reason, automobiles are unable to keep going, they shall be immediately parked off the road or, where this is impossible, on the outer edge of the road.

14. Fines and penalties.—Any person who violates any of the foregoing regulations shall be deemed guilty of a misdemeanor and shall be subject to a fine of not more than $500, or imprisonment not exceeding 6 months, or both, and be adjudged to pay all costs of the proceedings, and such violation shall subject the offender to immediate ejectment from the park. Persons ejected from the park will not be permitted to return without prior sanction in writing from the Director of the National Park Service or the superintendent of the park.

MAPS.

The following maps may be obtained from the Director of the United States Geological Survey, Washington, D.C. Remittances should be made by money order or in cash.

SHINU, 28½ by 25 inches, scale about 1 mile to 1½ inches, contour interval 50 feet. BRIGHT ANGEL, 26 by 20½ inches, scale about 1 mile to 1½ inches, contour interval 50 feet. An account of the geologic history of the Grand Canyon and a description of the rocks, by L. F. Noble, is printed on the reverse side of the map. VISHNU, 28 by 21 inches, scale about 1 mile to 1½ inches, contour interval 50 feet.

On the above maps the roads, trails, and names are printed in black, the streams in blue, and the relief is indicated by brown contour lines.

LITERATURE.

GOVERNMENT PUBLICATIONS.

Government publications on Grand Canyon National Park may be obtained as indicated below. Separate communications should be addressed to the officers mentioned.

May be purchased also by personal application at the office of the superintendent of the park, but that office can not fill mail orders.
DISTRIBUTED FREE BY THE NATIONAL PARK SERVICE.

The following publications may be obtained free on written application to the Director of the National Park Service, or by personal application to the office of the superintendent of the park.

Map of National Parks and National Monuments.

Shows location of all of the national parks and monuments administered by the National Park Service, and all railroad routes to these reservations.

SOLD BY THE SUPERINTENDENT OF DOCUMENTS.

The following publications may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., at the prices indicated. Postage prepaid. Remittances should be made by money order or in cash.

Glimpses of our National Parks. 72 pages, including 31 illustrations, 10 cents.\(^5\)

Contains description of the most important features of the principal national parks.

Contains nine chapters, each descriptive of a national park, and one a larger chapter devoted to other parks and monuments.

Guidebook of the Western United States, Part C, the Santa Fe Route, with a side trip to the Grand Canyon of the Colorado, by N. H. Darton and others. (Bulletin 613, U. S. Geological Survey.) 1915. 194 pages, 25 route maps, 42 plates, 40 text figures. 50 cents.\(^5\)

This guide describes the country along the Atchison, Topeka & Santa Fe Railway from Kansas City to Los Angeles. Although the description of the rocks and their relations and the scenic features form a large proportion of the matter, nearly every page gives information as to notable historic events, industrial resources, plants, and animals. The story of the Indians, past and present, especially the characteristic Pueblo tribes, is told in some detail. Many of the facts regarding the rocks are here presented for the first time. The book contains numerous views of prominent scenic features and pictures of restoration of some of the very remarkable animals whose bones are found in the clays.

An article giving credit of first traversing the Grand Canyon to James White, a Colorado gold prospector.

Describes the geology and scenic features of the Grand Canyon in the western part of the National Park. Contains a detailed account of the Algonkian strata exposed on Shinumo Creek.

\(^5\) May be purchased also by personal application at office of the superintendent of the park, but that office can not fill mail orders.

Describes the rocks that form the walls of the Granite Gorge in the bottom of the Canyon.

Describes the Paleozoic strata of the Grand Canyon in detail and contains diagrams showing the strata in profile as they appear in the walls.

BIBLIOGRAPHY.

Darton, N. H. "Story of the Grand Canyon of Arizona." Pp. 81. Published by Fred Harvey, 1917. (A popular illustrated account of its rocks and origin.)

The first paper is a technical, the second a popular account of the erosional history of the Grand Canyon region.

Describes fossil tracks found in the Coconino sandstone on Hermit trail.

— “First through the Grand Canyon” (being the record of the pioneer exploration of the Colorado River in 1869-70, edited by Horace Kephart, New York). Outing Publishing Co. 1915. 320 pp. Price, $1. (Outing Adventure Library No. 4.)

GRAND CANYON NATIONAL PARK.

Describes the Bright Angel fault.

These two papers give an account of the origin of the Paleozoic strata and the fossils that the strata contain.

OTHER NATIONAL PARKS.

Rules and Regulations similar to this for national parks listed below may be obtained free of charge by writing to the Director of the National Park Service, Washington, D. C.

Crater Lake National Park.
Glacier National Park.
Hawaii National Park.
Hot Springs National Park.
Lafayette National Park.
Mesa Verde National Park.
Mount Rainier National Park.

Rocky Mountain National Park.
Sequoia and General Grant National Parks.
Wind Cave National Park.
Yellowstone National Park.
Yosemite National Park.
AUTHORIZED RATES FOR PUBLIC UTILITIES,
SEASON, 1923.

HOTELS AND PUBLIC CAMPS.

The following hotels, etc., are operated by Fred Harvey:

EL TOVAR.

El Tovar Hotel is located at the railroad terminus, near the head of Bright Angel Trail, at an elevation of 6,866 feet above sea level, and open all the year. It is a long, low structure, built of native bowlders and pine logs. There are 93 sleeping rooms, accommodating 175 guests. Forty-six of these rooms are connected with private bath.

There is a music room and rendezvous. In the main dining room 165 persons can be seated at one time.

Hot and cold water, steam heat, and electric light are supplied. El Tovar also has a steam laundry.

Authorized rates at El Tovar Hotel.

American plan:

- One person in room without bath, per day............................ $6.00
- One person in room with bath, per day.............................. 8.00

There are few exceptional rooms with bath carrying an additional charge.

Meals only:
- Breakfast................................................................. 1.25
- Luncheon................................................................. 1.25
- Dinner................................................................. 1.50

BRIGHT ANGEL COTTAGES.

Cozy lodgings in cottages or tents are available at Bright Angel Cottages, adjacent to El Tovar. The accommodations are clean and comfortable. There are four cottages, open the year round and many large tents for summer only. All of the cottages have steam heat and electric light; one cottage also has baths. About 150 persons can be accommodated here. Meals are furnished a la carte at the café. Kitchen facilities are ample for quick a la carte service.

Authorized rates at Bright Angel Cottages.

Lodging only, per day, per person........................................... $1.50–$1.75

HERMIT CABINS.

On Tonto Plateau at the foot of Hermit Trail; consists of a central dining room, lounge cottage, and 11 sleeping cottages; accommodations for 30 persons.

Authorized rates at Hermit Cabins.

American plan, per day, per person........................................ $5
PHANTOM RANCH.

On the north side of the Colorado River near the mouth of Bright Angel Creek; consists of well-built stone cottages with mess hall and rendezvous with excellent accommodations.

*Authorized rates at Phantom Ranch.*

American plan, per day, per person........................................ $6

REST HOUSES.

THE LOOKOUT.

The Lookout is a quaint observatory and rest house, built on the edge of the rim near the head of Bright Angel Trail. It is equipped with a large binocular telescope in the tower, for observing the most distant reaches of the canyon by day and for viewing the heavens by night. There is a small library for the layman and scientist. Canyon maps and photos are for sale. The reception room has spacious windows, a fireplace, Navajo rugs, and easy chairs; it is electric lighted and steam heated.

HERMIT'S REST.

Where Hermit Rim Road ends and Hermit Trail begins is a unique rest house, built into the hill, with a roofed-in porch and a parapet wall. As the name implies, it is intended to provide rest and shelter for parties who take the Rim Road drive, or the Hermit Trail trip. Guests may sit at the tables outside or sheltered by the glass front inside, according to weather, and enjoy a light lunch in unusual surroundings. Admission is by ticket. Tickets may be obtained at El Tovar or Bright Angel Cottages, at 50 cents.

SHOPS AND STORES.

HOPI HOUSE.

Opposite El Tovar is a reproduction of the dwellings of the Hopi Indians and several Navajo hogans.

In Hopi House are installed collections of Indian handiwork. Here also live a small band of Hopis, who are among the more primitive of our Indians. The men weave blankets and the women make pottery.

The homes of the Hopis are on the edge of the Painted Desert, perched on the crests of lofty mesas where they live as did their forbears and cling to their high dwelling place. They are industrious, thrifty, orderly, and mirthful. A round of ceremonies, each terminating in the pageants called "dances," marks the different seasons of the year. Subsisting almost wholly by agriculture in an arid region of uncertain crops, they find time between their labors for light-hearted dance and song, and for elaborate ceremonials, which are grotesque in the Katchina, or masked dances, ideally poetic in the flute dance, and intensely dramatic in the Snake Dance. In the three and a half centuries of contact with the white race their manner
of life has not materially changed. The Indian tribes that roamed over mountain and plain have become wards of the Government, but the Pueblo Indian has absolutely maintained his individuality.

The Navajo women weave fine blankets and many of the men are expert silversmiths, who fashion bracelets, rings, and other articles from Mexican coin silver. The Navajo Indian Reservation—one of the largest in the United States—borders Marble Canyon on the east. They are a pastoral people, intelligent, and, like the Hopis, self-supporting. They own large numbers of sheep, cattle, and horses. The Navajos are tall, rather slender, and agile. They have been rightly called the Bedouins of the Desert. Nowhere are they gathered into permanent villages. Although "civilized," they still cling to old customs and old religious forms. The medicine man, or Shaman, has a large following, if not a large per cent of cures. Their dance ceremonies are weird in the extreme. The Fire Dance is a spectacular 10-day ceremony, seldom witnessed by white men, and occurring only once in seven years.

Supai Indians from Havasu Canyon frequently visit El Tovar.

VERKAMP'S.

Verkamp's, on the Rim, just east of the Hopi House, carries a complete line of Canyon Souvenirs and Indian Handicraft. It makes a specialty of Navajo rugs and silverware, Chimayo blankets, and Indian baskets, and carries postcards, folders, and photographs of the Canyon.

In this shop may also be seen one of the largest and best paintings of Grand Canyon as well as other work of the late Louis Aikin.

KOLB BROS.' STUDIO.

Kolb Bros.' studio is at the head of Bright Angel Trail. The Kolb Bros. give, each day, an interesting lecture, illustrated with motion pictures and slides, describing their boat trip through the canyons of the Green and Colorado Rivers. Admission, 50 cents.

The exhibition above referred to illustrates Major Powell's original exploration of the entire series of Canyons on these rivers and should not be confused with other excellent travel talks on the Grand Canyon, which latter describe and illustrate what can be seen by the visitor in a stay of a week or so at the canyon.

Here, too, visitors may view the canyon through a telescope and obtain reliable information. Photographic views and other pictures representing their many years' exploration of the Grand Canyon are for sale.

SIGHT-SEEING TRIPS BY ROAD.

REGULAR TRIPS BY AUTOMOBILE.

The following trips are available every day in the year by automobile:

Hermit's Rest.—Stopping en route at Maricopa, Hopi, Mohave, and Pima Points. First trip starts at 9.30 a.m., returning to El Tovar and Bright Angel about 12 noon. Second trip starts at 1.30
p. m., returning to El Tovar and Bright Angel about 4 p. m. Rate, $3. This rate includes use of facilities and light refreshments at Hermit's Rest. This drive is 15 miles round trip along the Rim Road. There is also a sunset trip to Hopi or Mohave Points, leaving El Tovar and Bright Angel Camp at 6.30 and returning about 7.45.

Hopi Point.—El Tovar to Hopi Point, 2 miles west; rate, $1.50.
Mohave Point.—Three miles west; rate, $2.

REGULAR SUMMER TRIPS BY AUTOMOBILE.

The following trips are available through the summer season (approximately from April 15 to November 15).

Grand View.—Through forest of tall pines via Long Jim Canyon and Thor's Hammer, 13 miles each way; time about 3½ hours. Leave El Tovar 9.30 a.m. and 1.30 p.m. daily. Rates, $4. From Grand View may be seen that section of the canyon from Bright Angel Creek to Marble Canyon, including the great bend of the Colorado. On the eastern wall are Moran, Zuni, Papago, Pinal, Lipan, Navajo, (Desert View), and Comanche Points; and the mouth of the Little Colorado River. Still farther beyond is the Painted Desert and Navajo Mountain—the latter plainly seen, though 120 miles away. The rim trail to Moran Point is interesting. Grand View Trail enters the canyon near Grand View Point.

Desert View.—Thirty-two miles each way via Long Jim Canyon, Thor's Hammer, Grandview, Hull Tank, Trash Dam, Tanner Tank, Old Aztec Ruin, Lipan Point, and head of Tanner Trail. Two round trips a day, leaving El Tovar 9 a.m., and 1.30 p.m. Rate for one person, $20; for two persons, $10 each; for three or more persons up to capacity of car, $8 each. Special auto for parties of six persons or less, $48; lunch extra, except for El Tovar guests.

At this point there is a far outlook not only into the canyon above the Granite Gorge, where the river valley widens, but also across the Painted Desert, toward Hopi Land, and along the Desert Palisades to the mouth of the Little Colorado. At sunset and sunrise it is a glorious sight. For that reason one preferably should arrange to stay overnight—a camping trip elsewhere referred to. One and one-half miles west of Desert View is Lipan Point, affording an excellent view of this whole region.

SPECIAL SUMMER TRIPS BY AUTOMOBILE.

These trips depend upon condition of roads and may be at times discontinued.

Bass's Camp, 24 miles, and Havasupai Point, 1 mile beyond. Rate same as Desert View trip.

Yavapai and Grandeur Points.—This drive extends 2 miles east of El Tovar. Rate, $1.
PRIVATE CONVEYANCE RATES.

Where special cars are desired, an extra charge of $2 is made for entire party, besides the individual rate for regular service.

As an example: The rate for regular trip to end of Rim Road is $3 each person. If one person desires to make this trip in a special conveyance, that person would pay $5; if two persons go, the entire expense would be $8; for three persons, $11; and so on up to six. The $2 extra is collected for the party as a whole, and not individually.

Other rates for special autos vary with service performed.

NOTE.—If the demand for regular-trip drives is so heavy as to require use of all conveyances available, private trips will be discontinued temporarily.

GARAGE SERVICE.

There is at Grand Canyon a large stone garage with ample facilities for repairing and supplying automobiles. The rate for storage of automobiles is $1 per day.

TRAIL TRIPS.

*Hermit Trail, stopping at Hermit Cabins overnight.*—Time, two days and one night. Hermit Road by auto. Down Hermit Trail, stay overnight at Hermit Cabins; go to river at mouth of Hermit Creek; return up Hermit Trail to Rim; thence to El Tovar over Hermit Rim Road. Trips leave El Tovar and Bright Angel Cottages at 9.30 a.m. and return next afternoon. Rates $18.25 each person, including guide, overnight accommodations, and meals en route and at Hermit Cabins. Private guide, $5 per day extra.

*Bright Angel Trail.*—The trail here is generally open the year round. In midwinter it is liable to be closed for a day or two at the top by snow, but such blockade is not frequent. The trail reaches from the hotel 7 miles to the Colorado River, with a branch terminating at the top of the granite wall immediately overlooking the river. At this latter point the stream is 1,272 feet below, while El Tovar Hotel on the Rim is 3,158 feet above. The trip is made on muleback, accompanied by a guide.

Those wishing to reach the river leave the main trail at Indian Garden and follow the downward course of Indian Garden and Pipe Creeks.

Leave at 8.30 a.m. for the river trip, 7 miles; return to Rim 5 p.m. Rate, $6 each person. Leave 10.30 a.m. for trip to plateau, 5 miles; rate, $5 each. Rates quoted above are for each person in parties of three or more. For special trips with less than three persons there is a party charge of $5 extra for guide. Lunch extra, except for El Tovar room guests.
It is necessary that visitors who walk down Bright Angel Trail and desire that guide and mules be sent to meet them, be charged full price and special guide fee of $5. This is unavoidable, as the mules and guides are not available for any other trip.

_Hermit-Tonto-Bright Angel Loop._—This trip takes two days and one night. Hermit Rim Road to head Hermit Trail; down Hermit Trail; stay overnight at Hermit Cabins; go to river foot of Hermit Creek; return along Tonto Trail to Indian Garden; thence up Bright Angel Trail.

Start from El Tovar or Bright Angel Cottages at 9.30 a.m., and return next afternoon. Round trip charge is $23.25 for each person; private guide is $5 a day extra; rate quoted includes regular guide, overnight accommodations, and meals en route.

_NOTE._—This trip can be lengthened to three days and two nights by spending an extra night in the canyon, also going to river at foot of Bright Angel Trail—a 34-mile journey. Rate, $14 a day, one person; $8 a day extra each additional person; provisions extra; includes guide.

_Three-Day Ribbon Falls trip._—Leave about 9 a.m. Down Bright Angel Trail, crossing the Colorado River by new steel suspension bridge and reaching Phantom Ranch early afternoon. Overnight at Phantom Ranch, following morning by way of Kaibab Trail in Bright Angel Canyon, 5 miles to Ribbon Falls, beautiful clear waterfall in the form of a crystal ribbon shedding its waters on a natural rock altar in the midst of a verdant amphitheater. Box lunch at falls, and return to Phantom Ranch for overnight. On third day the return to El Tovar completes a never-to-be-forgotten experience. The all-expense rate for this trip, for parties of three or more, is $30 per person. For parties of less than three, a party charge of $5 per day for guide, extra.

_Across Grand Canyon to Kaibab National Forest on North Rim._—This combines an instructive and interesting excursion across the whole width of the Grand Canyon, from rim to rim, with a visit to the Kaibab National Forest. This beautiful virgin forest is the home of thousands of deer and the haunt of the mountain lion and the bobcat. Starting from the South Rim, the round trip is made in five days, including one day spent in the forested section. The route is by the Bright Angel and Tonto Trails across the Kaibab Suspension Bridge to Phantom Ranch; thence along Kaibab Trail and up Bright Angel Canyon to Wylie Way Camp at Bright Angel Point on the North Rim. On the return Ribbon Falls visited en route. For those who may wish to spend some time in the Kaibab National Forest, saddle stock and camping outfits are available at Wylie Way Camp. Approximate expense, except personal accommodation in Wylie Way Camp, $70 per person for the five-day trip.
GRAND CANYON NATIONAL PARK. 55

Wylie Way Camp, $6 per day extra. For full particulars and advance reservations address Manager, Transportation Department, The Fred Harvey Co., Grand Canyon, Ariz.

*Dripping Spring.*—This trip is made on horseback all the way, or auto to Rim, and saddle horses down trail; 10 miles west, starts at 8.30 a.m. Rate, $5 each for three or more persons; for less than three persons, $5 extra for guide. Private parties of three or more persons, $5 extra for guide.

**SADDLE HORSES.**

Recently many new bridle paths along the Rim and through the pines of Tusayan have been opened up, so that horseback riding now is possible for all. The animals are well trained and dependable. Saddle horses cost $5 a day, or $3 a half day. English, McClellan, Whitman, or western stock saddles furnished as requested. Sidesaddles not provided. Rates quoted include, for parties of three or more, the services of a guide. For a guide for parties of less than three or for a private guide the rate is $5 a day, or $2.50 a half day. Horseback trips over any of the trails into the canyon are only permitted when accompanied by guide. This is necessary to avoid risk in meeting trail parties and pack trains.

There are several interesting foot trails near Grand Canyon village. Information as to these may be obtained at the superintendent's office.

**CAMPING TRIPS.**

Camping trips with pack and saddle animals, or with wagons and saddle animals, are organized, completely equipped, and placed in charge of experienced guides.

For climatic reasons it is well to arrange so that camping trips during the season from October to April are mainly confined to the inner canyon. For the remainder of the year, i.e., April to October, they may be planned to include both the canyon itself and the rim country.

The rates vary from $10 to $15 a day for one person; $6 to $8 a day each additional person. Such rates specially include services of guide and camp equipment; provisions extra; figures quoted are approximate only, varying with different outings.

*Havasu Canyon and Havasupai village.*—The best time to visit this place is from May to October. A journey of about 50 miles, first by wagon or auto, 35 miles across a timbered plateau, then on horseback down Topocobya Trail along Topocobya and Havasu Canyons, to the home of the Havasupai Indians.

The home of this little band of 200 Indians is in Havasu Canyon, a tributary of the Grand Canyon, deep down in the earth two-fifths of a mile. The situation is romantic and the surroundings are beautified
by falls of water over precipices several hundred feet high, backed by grottoes of stalactites and stalagmites. This water all comes from springs that gush forth in surprising volume near the Havasupai village.

The baskets made by the Havasupai women consist of the burden basket, a shallow tray, and a water bottle of willow. Those made by the older weavers are of fine mesh, with attractive designs, and bring good prices. Havasupai means people of the blue water. Padre Garces was the first white man to visit their canyon home. In early days the Havasupais undoubtedly were cliff dwellers. They built nearly all the Grand Canyon trails, or rather their rude pathways were the advance guard of the present trails. Their summer homes resemble those of the Apaches. The winter homes afford more protection against the weather.

The round trip from El Tovar is made in three days, at an expense of $15 a day for one person, $20 a day for two persons, and $25 a day for three persons. Each additional member after party of three, $5 a day; provisions extra. These rates include service for party of one or two persons, also cost of horse feed, but do not include board and lodging at Supai village.

For parties of three to six persons an extra guide is required, whose services are charged for at $5 a day.

Note.—At the western end of the Granite Gorge is a trail down to the Colorado River and up the other side to Point Sublime and Powell’s Plateau, the river being crossed by ferry. Reached by team from El Tovar, a distance of 24 miles, or it can be seen as a detour on the Havasu Canyon trip; rates on application.

Desert View.—Elsewhere reference is made to Desert View auto trip. When taken by wagon it occupies three days, leaving El Tovar morning of first day and returning afternoon of third day, with all night camp at destination. Rate, $10 for one person and $5 each additional person; provisions extra; rate named includes one guide; an extra guide costs $5 a day.

Little Colorado River.—The trip to the mouth of the Little Colorado is a most interesting one. Leaving El Tovar in the morning by wagon, camp is made the first day at Deer Tank. The next day the cliff dwellings are visited and the plateau overlooking the Canyon of the Little Colorado is reached by midday. From the edge of the plateau to the bottom of the canyon is a straight drop of 2,500 feet. Rates on application.

Painted Desert and Hopi Land.—The trip is made with saddle and pack animals. The first night the camp is at Saddle Horse Tanks. Hopi Crossing of the Little Colorado is reached the next afternoon and Tuba City the third day. The Hopi village of Moenkopie is seen en route.
The Painted Desert country affords a most interesting study of a phase of Indian entertainment, little known to white people. Rates on application.

Other camping trips are being arranged for by the National Park Service. Information may be obtained at the superintendent's office.

**THE NORTH RIM.**

**AUTO STAGE TRANSPORTATION FROM UTAH POINTS.**

The North Rim of the Grand Canyon National Park is reached from Lund, Utah, on the Union Pacific System, and from Marysvale, Utah, on the Denver & Rio Grande Western Railroad by automobiles operated by C. G. Parry, Cedar City, Utah.

Special all-expense tours are offered combining visits to Zion National Park, Cedar Breaks, and Bryce Canyon. These tours leave Lund daily from June 15 to October 10, and from Marysvale daily from June 15 to October 10.

**Authorized rates.**

From Lund, Utah: 

Four-day tour of Grand Canyon National Park (North Rim), Kaibab Forest via Cedar Breaks, and Navajo Lake, fare for automobile transportation and 11 meals and 3 nights' lodgings ........................................... $85

Seven-day tour of Zion National Park, Grand Canyon National Park (North Rim), Kaibab Forest, Bryce Canyon, and Cedar Breaks, fare for automobile transportation and 20 meals and 6 nights' lodgings ................. 120

From Marysvale, Utah: 

Five-day tour of Grand Canyon National Park (North Rim), Kaibab Forest and Bryce Canyon, fare for automobile transportation and 13 meals and 4 nights' lodgings ...................... 110

Seven-day tour of Grand Canyon National Park (North Rim), Kaibab Forest, Zion National Park, Cedar Breaks, and Bryce Canyon, fare for automobile transportation and 19 meals and 6 nights' lodgings ............. 135

Above rates include automobile transportation and meals and lodgings en route. Children under 12 years of age, one-half fare. Twenty-five pounds of baggage on full-fare tickets and 12½ pounds on half-fare tickets will be transported free; excess baggage will be charged for at rate of 10 cents per pound.

**SPECIAL AUTO SERVICE.**

Arrangements also can be made with H. I. Bowman, of Kanab, Utah, for special automobiles from Marysvale, Utah, to Bryce Canyon, North Rim of the Grand Canyon National Park, Zion National Park, and Cedar Breaks and return to starting point. Special cars carrying four persons for 50 cents per mile and cars carrying six persons for 60 cents per mile, these cars to be operated at the pleasure of the occu-

⁴ Reservations for these trips must be made in advance with C. G. Parry, Transportation Manager, Cedar City, Utah.
pants as to distance traveled each day and as to places visited, with the proviso that a minimum charge will be made for 20 miles in any one day whether traveled or not. Twenty-five pounds of free baggage will be allowed each person; excess baggage will be charged for at the rate of 10 cents per pound. Two children under 6 years of age will be carried in lieu of one adult.

**WYLIE WAY CAMP.**

On the North Rim at Bright Angel Point, situated in a shady grove of pines, is a Wylie Way Camp, consisting of a central dining tent and comfortable sleeping tents; everything is spotlessly clean. Camp opens about June 20 and closes about October 1. There are accommodations for about 25 people.

Authorized rate at Wylie Way Camp, American plan, per person, per day, $6.

**SADDLE-HORSE TRIPS.**

Arrangements may be made at the Wylie Way Camp or by writing to Jensen & Vaughn, Fredonia, Ariz., for saddle-horse trips to various points of interest on the North Rim and in the Canyon. Time required and rates are as follows:

Side trips and rates therefor from Wylie Way Camp, Bright Angel Point:

- To Point Imperial, one-day trip.
- To Point Sublime, two-day trip.
- To Cape Royal, two-day trip.

Saddle horses for these trips or for special trips on the plateau, $3 each per day. Mounted guide for North Rim trips, $5 per day.

Down Bright Angel Trail to Colorado River, and cross-canyon trips, the rate is $6 per day for each horse.

Guide for river and cross-canyon trips, $6 per day.

For all overnight trips from Wylie Way Camp on the North Rim one or more pack horses must accompany the party, the rates for these being the same as for saddle horses.

Bedding and provisions for North Rim trips, $2.50 per day for each person.
A PORTION OF THE FIRST FOREST.
The profusion of petrified wood is clearly shown.
