in our polluted, crowded, jet-age world. The Lake Mead shoreline, consisting of wide gravel beaches, sand dunes, and steep canyon walls, provides endless opportunities for recreation - fishing, boating, water skiing, and beach camping.

Lake Mead, a narrow reservoir created by Davis Dam, reaches across 108 miles (173 km) to the base of Hoover Dam. Besides the various activities, clean air, and ideal climate provide endless opportunities for swimming, hiking, and photography. This expansive country offers much more than just the beauty of its scenery. The history of man in the region reached a dramatic climax here through the Paiute Indians. Trading and agricultural societies evolved along the shores of the lake. The area became the western frontier of the great Pueblo Culture until about 1150. Most significant archeological sites, including the Lost City Pueblo and the Virgin River Quarries, were inhabited by the rock dwellers.

The region is well known for its arid climate, which makes this national recreation area a welcome spot to escape the heat. Summer nights are usually comfortable with low temperatures around 21°C (70°F). For protection, provide against bright sunshine, wearing a sunhat and sunglasses are recommended. Be prepared for low water levels and stay away from danger zones and landslides. Bring warm clothing. The Alan Bible Visitor Center near the west end of Lake Mead offers a 46-minute audiovisual presentation that will help you understand the history of the area surrounding the lake. Visitors can also enjoy the interpretive program schedule posted at visitor centers and ranger stations around the lake.

The history of the region began in the late 19th century, when James Henry Powell first explored the Colorado River. Powell, a geologist and explorer, was one of the first to recognize the importance of the Colorado River in the development of the American West. His work paved the way for the construction of Hoover Dam, which was completed in 1935.

ABOUT YOUR VISIT
- **Nearest town:** Boulder City, NV
- **Distance:** 40 miles (64 km) from Boulder City.
- **Allow:** 2-3 hours for visit.
- **Best season:** Late September through late December is when the weather is the most delightful. River in July and August, when daytime temperatures may climb above 42°C (108°F), can be too hot for the more sensitive species. July through October is the best time for bird watching.

Transzonal Community, which is made up of plants and animals living in, or associated with, permanent springs, streams, and the lakes. The fauna includes the Mohave waterboat, desert pupfish, and the desert goby. The flora includes the Mohave yucca, creosotebush, and the Utah rockrose.

Dissecting the terrain at all elevations are the drainages and canyons of the Transcensional Community, where a mosaic of species resides within and between the communities. The Mohave mound cricket thrives in the desert scrub, and desertdwelling tortoises thrive in moist environments

The Lake Mead area is a paradise for nature lovers. The lake itself is a vast expanse of clear water, with a variety of wildlife living in and around it. The lake is home to a variety of fish species, including the Colorado River trout and the desert pupfish. The lake is also home to a variety of bird species, including the sandhill crane, the American avocet, and the red-tailed hawk.

The Lake Mead area is also a popular destination for water sports, including boating, fishing, and water skiing. The lake is home to a variety of fish species, including the Colorado River trout and the desert pupfish. The lake is also home to a variety of bird species, including the sandhill crane, the American avocet, and the red-tailed hawk.
