

**LIVING WITH OUR ENVIRONMENT** is concerned both with the uses of man's environment, and with the protection we afford to natural ecosystems and wildlife habitat. It serves as an informative reference work of easy-to-understand articles on complex problems facing our society as we seek to provide environmental safeguards while maintaining a high standard of life.

This 9x12-inch, 120-page softcover volume in full color will be a welcome addition to

any home, school or public library. It discusses scientific research into water supplies vital to the Everglades, the fragile beauty and historical values of the California desert, the treasure house of natural wonders that is Alaska. A great number of the 300 photographs have never before been published.

Do you know how exploration for oil and gas on America's Outer Continental Shelf

helps provide recreation and conservation across the Nation?

Do you want to know more of the ongoing campaign to save our shrinking wildlife habitat?

Are you interested in how satellites help us monitor the environment?

Then this Conservation Yearbook is for you. It may be ordered from the Superintendent of Documents, using the coupon on the following page.
