# the northeast

America was always a land of promise. In the beginning it was considered merely an obstacle to the long-sought route to Asia; but the Spanish, French, and English explorers who tramped the land and sailed the rivers in the 15th and 16th centuries carried back to Europe tales of unparalleled riches. By the early 1600's they had returned and claimed for King and country territories that extended from the Atlantic Ocean to the Mississippi River. For nearly 200 years, from 1620 to 1776, England was the principal power in the Northeast region; and when that power was broken in revolution, it was here that a loose confederation of individual colonies became a nation of united States. By 1800 this section of the new Nation extended west to the Ohio and Mississippi Rivers—the original Northwest Territory, comprising the future states of Ohio, Indiana, Illinois, Wisconsin, and Michigan.

In 1790 nearly two-thirds of the population of the original Thirteen Colonies was located north of the Potomac River, between the present District of Columbia and the city of Boston. Today this same 437 miles comprises more than one-quarter of the total population of the United States, and within this vast urban spread lie many historical sites and monuments that commemorate the founding of the Nation: Federal Hall, Minute Man, Independence Hall, and Morristown, to name only a few.

The National Parks of the Northeast are predominately historical in nature, but they cannot be confined to Revolutionary and Colonial days—their broad sweep of history actually runs from prehistoric Indian mounds in Ohio to the birthplace of John Fitzgerald Kennedy in Massachusetts. Within its boundaries lie the best known of the historical sites commemorating the War of 1812 (Ft. Mchenry, the site which served as a military installation from 1776 to World War I), two of the most important battlefields of the Civil War (Gettysburg, commemorating the three-day battle as well as the famous Lincoln address; and Antietam, site of the bloodiest single-day battle of the war), and homes associated with five other presidents (Lincoln, John Adams and his son John Quincy Adams, and the two Roosevelts).

Conservation of the natural scene came to the Northeast considerably later than in the West, but this does not diminish the role the National Park Service has played in preserving the national areas in this section of the Nation. The Northeast region has three of the six National Seashores (Cape Cod, Fire Island, and Assateague Island) and the only National Lakeshores (Pictured Rocks and Indiana Dunes). Each in its own way is a barrier against time, for with the help of Congressional legislation they have been saved from commercial development.

Acadia National Park, that mighty rock fortress along the Maine sea coast, is an excellent example of the rescue of wild, rugged, near-primitive beauty from the clutches of man. But there are few true wilderness areas left, few places where there are no roads or wheeled vehicles, where there are only limited facilities for man's existence, and where there is complete freedom for animals and trees alike. With the possible exception of certain sections of Alaska, the only such wilderness in the United States is Isle Royale, an archipelago in Lake Superior, off the coasts of Michigan and Minnesota and just fifteen miles from the Canadian border. Here wildlife roams unmolested; here an occasional man finds retreat; and here a bit of nature is preserved.

## administration

The National Parks of the Northeast are administered by the National Park Service, U.S. Department of the Interior. Each Park is managed by a superintendent and staff whose address is listed elsewhere in this folder. Interpretive and informational folders for the individual parks may be obtained by writing directly to the park or to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The Department of the Interior—the Nation's principal natural resource agency—has a special obligation to assure that our expendable resources are conserved, that our renewable resources are managed to produce optimum benefits, and that all resources contribute to the progress and prosperity of the United States, now and in the future.
