Cat Island

*National Wildlife Refuge
Bird List*

David Hall

Cat Island National Wildlife Refuge is one of over 530 refuges in the National Wildlife Refuge System. The refuge is located about 5 miles west of St. Francisville, LA, in West Feliciana Parish. The refuge is primarily comprised of bottomland hardwood forest that is annually flooded by the Mississippi River. Several habitat types including overcup oak-bitter pecan, hackberry-elm-ash, nuttall oak-ash-sweetgum, and shrub-scrub swamp occur on the refuge. While baldcypress trees are found throughout the area, there are stands of old growth cypress-tupelo present.

The river can flood the refuge for up to 6 months each year, primarily between January and June. At that time, access is limited to boats only. In winter, a variety of waterfowl species are present throughout the refuge. Songbirds and hawks that are associated with the mid-story and canopy are there, while ground- and shrub-nesting birds are usually not present. Once the river drops and floodwaters recede from the refuge, many birds return to the refuge. Wading birds, including wood storks, feed in pools of water left behind by the river in summer. The extent of flooding by the Mississippi River varies year to year, which provides a variety of birdwatching opportunities on the refuge.

Sp= March - May

S = June-August

F= September - November

W= December-February

C = common (certain to be seen in suitable habitat)

U = uncommon (present, but not certain to be seen)

O = occasional (seen only a few times during a season)

R = rare (seen at intervals of 2 to 5 years)
