Few battles in world history have had a more stirring climax than Saratoga and probably none have had more far-reaching consequences. Here, a ragged but inspired rebel army convincingly demonstrated its ability to rise to brilliant victory after absorbing staggering blows. In dramatic fashion Saratoga not only rescued the colonists from almost certain defeat, but also pointed significantly to the fate which likely would befall any enemy force penetrating into the interior of America and operating independently of the sea.

Abroad, the battles served immeasurably to increase the military prestige of American arms, while at home they greatly strengthened the fighting morale and discouraged loyalist opposition. In their broad aspects the two battles of Saratoga may be considered to mark definitely the turning point of the American Revolution in that the result brought to the cause of the hard-pressed colonists the assistance of France, Spain, and Holland, thereby greatly increasing the probability of eventually winning independence. To a hesitant, vacillating France awaiting the opportune moment to strike a telling blow at the British, Saratoga brought the decision for intervention—a decision which previous diplomatic negotiations had been unable to obtain. The active entrance of France into the war in June 1778, provided the financial, military, and naval support without which the American cause would have been practically hopeless. Though three more years of fighting were necessary in order to bring ultimate victory at Yorktown, Saratoga furnished the physical and psychological impetus which brightened a desperate cause at a moment when failure would have been disastrous. Without the success of American arms at Saratoga, it is difficult to see how the struggle could long have been continued.

Writing of the significance of Saratoga, Sir Edward Creasy, the eminent English historian, said: "Nor can any military event be said to have exercised more important influence upon the future fortunes of mankind, than the complete defeat of Burgoyne’s expedition in 1777; a defeat which rescued the revolted colonists from certain subjection; and which, by inducing the Courts of France and Spain to attack England in their behalf, insured the independence of the United States, and the formation of that transatlantic power which not only America, but both Europe and Asia, now see and feel."
THE BURGOYNE EXPEDITION  
CANADA TO SARATOGA, 1777

THE BRITISH PLAN OF CAMPAIGN FOR 1777 WAS TO ...

THE CENTRAL POINT OF THREE COOPERATING ARMIES WAS ALBANY.

LACK OF COORDINATION WEAKENED THE BRITISH PLAN.

MORE NEVER SAILLED UP THE HUDSON.

ST. Leger was blocked by the Americans at Fort Stanwix.

Burlington, after a victorious advance through northern New York, drove a defeated American army back to the south bank of the Mohawk, near the mouth of the Mohawk River, crossed to this side of the river, and took Saratoga (Schoharie) on September 11, 1777, and approached this position where he was opposed by an American army of growing strength.

ROUTE COVERED
A contemporary of the event said of it, "Rebellion which a twelve-month ago was a contemptible pygmy, is now in appearance a giant." Saratoga truly must be considered as one of the cornerstones of American liberty and as one of those momentous events which shape the destiny of nations. Even in the light of the nearly two centuries that have elapsed, the significance of this epochal victory is difficult to appraise fully.

The British Plan of 1777

The Hudson-Champlain route for centuries has constituted a great strategic highway of the continent. Long the warpath of the powerful Iroquois, this route in pre-Revolutionary years had witnessed the ebb and flow of the tides of invasion as England and France became locked in the titanic struggle for the possession of the New World. Along this route the British commander, General Abercrombie, advanced in 1758 on his ill-fated attempt to seize Ticonderoga from the French. The graves of the "Black Watch" attest the blunders of his judgment. One year later his successor, Lord Amherst, followed the same route, to succeed where his predecessor had failed.

With the outbreak of the Revolutionary War the area again became the scene of active fighting, as colonial arms pushed boldly northward to seize Ticonderoga, Crown Point, and Montreal, and to storm the ramparts of Quebec. In 1776, the British launched a counterattack which, after wiping out most of the American gains, was dramatically checked by the gallant action of the American fleet under Gen. Benedict Arnold on Lake Champlain.

Fort Ticonderoga, the first objective of Burgoyne in 1777. Courtesy Fort Ticonderoga Museum.
It was no idle chance that Britain, after 2 years of futile effort to coerce the colonies, should choose the Hudson-Champlain Valley as the route offering the greatest strategic possibilities for a quick suppression of the rebellion. Obviously, from a military standpoint, once control could be obtained of the ports and the narrow strip of coastal plain along the Atlantic seaboard, the backbone of the rebellion would be broken. By virtue of her seapower, England already had possession of the chief ports. Thus she was able to turn her attention to the second phase of her strategy. Of the three million American colonists, approximately three-fourths lived in the narrow border strip from Massachusetts to the northern boundary of Virginia. The key to this populous area was the Hudson-Champlain line. The dominance of this natural avenue of transportation would not only provide an effective barrier separating the New England States from the rest of the struggling colonists, but would remove any menace to the rear of the British armies operating offensively to the south. In control of this area Britain could then crush the separate armies in detail.

The plan, as conceived by Gen. John Burgoyne and approved by the King and Cabinet, called for a double advance along the Hudson in which the army of Burgoyne moving southward from Canada would effect a junction at Albany with the army of Sir William Howe moving northward from New York City, the two to be joined by Gen. Barry St. Leger moving eastward along the Mohawk from Oswego on Lake Ontario. That this strategy would succeed appeared certain, for against an American army composed chiefly of raw recruits, ill-disciplined and poorly equipped, were matched the seasoned veterans of the British forces led by the foremost military commanders of the time.

The Burgoyne Campaign

With all the pomp and pageantry characteristic of the eighteenth century, Burgoyne embarked from St. Johns, Canada, June 17, 1777, with a force of approximately 9,400 men, under instructions "to proceed with all expedition to Albany and put himself under the command of Sir William Howe." The army consisted of about 4,700 British regulars, 4,200 German troops hired by the King of England, and between 600 and 700 Canadians, Tories, and Indians. It was accompanied by a splendid train of artillery made up of 138 bronze cannon. Seldom, if ever, has the American continent witnessed a more picturesque display of military splendor. To the gay, multicolored uniforms of the various British, German, Canadian, and Tory regiments were added the bright war paint and feathers of their Indian allies.

With 3 large vessels, 20 gunboats, and 200 flat-bottomed transports, Burgoyne sailed boldly along the 200-mile length of Lake Champlain to

attack his first objective, Fort Ticonderoga, the American guardian of northern New York and New England. On July 1, the British Army reached Fort Ticonderoga and began the siege of this fortress, which was considered by British and Americans alike to be the strongest in North America. A number of factors, unknown to the British and most Americans, however, had caused the strength of Ticonderoga to be greatly overestimated. The lines of the fort had been laid out to be held by an army of at least 10,000 men; the American commander, Gen. Arthur St. Clair had only some 3,000 men on hand with which to defend these vast works. Due to the shortage of men, and perhaps also to neglect, the Americans had failed to fortify steep Sugar Hill (Mount Defiance) which dominated the fort from the southwest. It was the belief of the American leader that the slopes of this mountain were so steep that it would prevent the British from dragging cannon to its top. Burgoyne’s engineers soon dispelled this American illusion, for on the afternoon of July 5 the Americans were horrified to see the Royal Army constructing batteries on the mountaintop. Once these cannon were in position, the American Army was in immediate danger of being completely encircled.

Retreat of the Americans

General St. Clair at once made plans to abandon the fortress. That night, under the cover of darkness, the American Army began retreating across the bridge of boats which ran from the fort to the east shore of Lake Champlain. Here the American Army split, half of it retreating by land and the other half, with the sick, wounded, and supplies, embarking on the small American fleet and sailing down South Bay to Skenesboro (Whitehall). As the secret retreat was being successfully carried out, one of the buildings in the fort caught fire, and the flames revealed to the British on the summit of Mount Defiance the events that were taking place below.

Burgoyne ordered an instant pursuit. With great speed and energy, the British general, accompanied by the English fleet and part of his army, smashed through the floating bridge, which the Americans had hoped would retard the British pursuit, and sailed swiftly down South Bay after the retreating American fleet. At the same time Burgoyne dispatched his second in command, Gen. Simon Fraser, with the remaining part of the Royal Army in pursuit of the American forces retreating by land. On the afternoon of July 6, Burgoyne, with his fleet, overtook the Americans as they neared Skenesboro and proceeded to capture and destroy all that remained of the American fleet, taking many prisoners and supplies, while the remnants of the American Army fled into the forest.
Early on the morning of July 7, General Fraser launched an attack, near Hubbardton, Vt., on the rear guard of the section of the American Army that was retreating by land. After a fierce battle the American force was totally routed and dispersed over the mountains. Near Fort Ann, on July 8, the British also defeated a third force of American troops. Everywhere, then, the American armies were in full retreat before the advance of Burgoyne’s triumphant army. Also there now swarmed ahead of the Royal Army great numbers of savage Indian warriors, terrorizing the settlers of the Hudson Valley.

By taking Fort Ticonderoga, Burgoyne had opened the gateway to the Hudson, destroyed the American fleet on Lake Champlain, captured great quantities of supplies, and taken many prisoners as well as 128 American cannon; all at a loss of less than 200 men. George III was so
exultant over the news from Ticonderoga that he is said to have exclaimed: "I have beat them! I have beat all the Americans!" The fall of this fortress proved a severe shock to the American morale and served further to increase British contempt for the character of colonial resistance.

Although the roads far to the south were jammed with long lines of wagons, horses, and men of the retreating American Army and with the families of frightened settlers as they fled before the invading army, Gen. Philip Schuyler, the American commander of the Northern Department, had not yet given up the struggle. He concentrated the few remnants of the fleeing American forces at Fort Edward, and from there he dispatched hundreds of axmen to fell trees, blocking the roads to the north. Bridges were destroyed, crops burned, and cattle and horses driven off along the route of the British advance. Marching 23 miles overland from Skenesboro through Fort Ann to Fort Edward on the Hudson, Burgoyne encountered innumerable delays because of the rough nature of the country and the effective retarding tactics adopted by General Schuyler. It was not until July 30, 23 days after the battle of Hubbardton, that the Royal Army was finally able to reach Fort Edward. This was an average advance of only 1 mile a day.

On his arrival at Fort Edward the British commander found himself confronted with a new problem. His Indian allies had driven off friend and foe alike, and in territory where Burgoyne had expected to receive aid and support he found only abandoned homes and fields. With an army of some 8,500 men, 39 remaining bronze cannon, 1,700 baggage and artillery horses, and 200 head of oxen to supply, and faced with a countryside devastated by his Indians and his foe, the British commander found it necessary to bring practically all of his provisions from Canada. This operation required the utmost efforts of his army, and it was mid-September before Burgoyne could bring forward sufficient supplies to enable him to cross the Hudson at Saratoga.

The St. Leger Expedition

By this time the tide of events already had started running against the British. This was first evidenced by the news of St. Leger's defeat at the bloody battle of Oriskany on August 6. St. Leger's force of about 1,600 men was made up chiefly of Tories, under the leadership of Sir John Johnston and Col. John Butler, and a number of Indians of the Iroquois Confederacy. The Iroquois were divided in their sympathies, but Joseph Brant and his Mohawk warriors and many Cayugas and Senecas joined St. Leger. The immediate objective of St. Leger was to reduce Fort Stanwix, which was held by 500 men under Col. Peter Gansevoort. As the British leader approached the fort, German settlers of the Mohawk Valley assembled under the leadership of Gen. Nicholas Herkimer and
advanced to its relief. The Tories and Indians prepared an ambuscade in a ravine near Oriskany, 6 miles below Fort Stanwix, where Herkimer and his farmer militia were almost entirely surrounded. In a desperate struggle with knife, hatchet, bayonet, and clubbed rifle, Herkimer and his men finally put the Indians and Tories to flight from a field that has few, if any, equals in savage horror on the American continent. Herkimer, himself, died from the effects of a wound received on the field of carnage, and his followers were so reduced and exhausted by the ordeal that they were compelled to return to their homes. Sixteen days later St. Leger's force was dispersed by the defection and desertion of his Indian allies on receipt of news in his camp that a large force under Benedict Arnold, dispatched by General Schuyler, was approaching for the relief of Fort Stanwix. Only a few of St. Leger's troops ever found their way back to Montreal.

The Battle of Bennington

Another crushing calamity was in store for the British. Schuyler’s policy of destroying all the crops along the line of Burgoyne’s march had important consequences. It was well known that most of the inhabitants of upper New York, along the Lake Champlain and Hudson route, were favorable to the British cause. Burgoyne had counted on these Tories to aid him materially, especially in the matter of supplies. Now, with the maturing crops systematically destroyed before him, he was faced with difficulty in providing for his army. This led him to send an expedition of about 800 men, under Col. Friedrich Baum, to Bennington, Vt., to capture a large store of supplies which had been gathered there for the American forces. Gen. John Stark aroused the countryside, and the Vermont farmers turned out and administered a crushing defeat on August 16 to Baum’s troops. Another contingent, under Lt. Col. Heinrich Breymann, came up at this time and threatened to undo Stark’s victory, but the timely arrival of Col. Seth Warner and his Green Mountain Rangers overwhelmed Breymann, and the German commander was forced to retreat. By this blow Burgoyne lost approximately 800 men, mostly Germans, and 4 bronze cannon, which seriously weakened his army at a critical time and prevented him from obtaining much needed supplies. The electrifying news of this American victory, after a long series of defeats, not only discouraged Burgoyne’s Indian allies, but also greatly encouraged militia enlistments in the Patriot army.

Of still greater concern to Burgoyne, however, was the fact that no word had been received from Howe concerning his cooperation from the south. As a matter of fact, Howe had chosen to move southward and attack Philadelphia, even though he knew Burgoyne expected to receive his cooperation. Despite these setbacks to the British, which had greatly boosted American morale, Burgoyne, in compliance with his orders, gambling on the belated cooperation of Howe and on his own ability to smash the American force in his front, crossed the Hudson River at Saratoga on September 13. Thus he severed his communications with Canada and risked all on a push to Albany.
The two recent American victories greatly stimulated the hopes and efforts of the colonists. Men and supplies began to pour into Schuyler's tiny army which had now retreated as far south as Halfmoon. On August 19, 3 days after the victory at Bennington, General Schuyler was replaced by Maj. Gen. Horatio Gates as the commander of the Northern Department. As the American Army increased in confidence and strength, growing from a low point of some 3,000 men, it began advancing slowly up the Hudson. Four miles from Stillwater, the British advance came upon the Americans, 9,000 strong, firmly entrenched at Bemis Heights under the command of Gates.

The American position was well chosen, for here the bluffs so converged with the river as to produce a narrow opening along the river plain through which a passage could be made only at great hazard. With a deep entrenchment blocking the river road, Thaddeus Kosciuszko, the Polish engineer and general who had volunteered in the American cause, had lost no time in establishing a strong line of defense which in appearance was like the segment of a great circle. Powerful batteries extended along the edge of the bluff. From there the line turned northwestward and followed the natural advantages of the ground to a commanding knoll near the site of the Neilson barn where it then turned south by west, terminating at the edge of a ravine approximately three-quarters of a mile distant. The extremities of this position were defended by strong batteries. Most of the line was strengthened by a breastwork, without entrenchments, constructed from the trunks of felled trees, logs, and rails.

At the apex of the line, Neilson's barn was converted into a rude fort, and a strong battery was established at this point. Running in front of the right wing of the American position, in a parallel direction, was a

*View looking east from the American river batteries, the key to the American defensive position. It commanded the Hudson River and thus blocked Burgoyne's advance.*
deep, heavily wooded ravine. The area immediately in front and to the west of the center of the American line, however, had been partially cleared, so that the felled trees made an abatis difficult to penetrate. Except for a small number of scattered farm cleanings, the rough and rolling ground to the north of the American position was so thickly wooded as to furnish a distinct handicap to a coordinated attack or to the proper use of artillery.

Composition of the American Army

Behind the right wing of the American position were stationed the Continental brigades of Nixon, Paterson, and Glover under the immediate command of Gates. Behind the center and left were the Continental brigades of Poor and Learned; also the 500 Virginia riflemen and 300 Light Infantry of Major Dearborn, which together composed a corps led by Col. Daniel Morgan. Morgan’s riflemen had been specially assigned by General Washington to the force confronting Burgoyne, as they were well versed in backwoods fighting and were calculated to offset the Indian and Tory allies of the British. The troops led by Poor, Learned, and Morgan constituted a division under the command of Arnold. Present with the American Army was an artillery train of 22 cannon. Thus stationed, and continuing to improve their fortifications, the American troops awaited the advance of Burgoyne.

The Battle of September 19

It was at this point in the campaign that Burgoyne felt most severely the loss of his Indian allies. Following the murder of Jane McCrea at Fort Edward on July 27 (at which time Burgoyne attempted to discipline his Indians), and the two British reverses at Oriskany and Bennington, the Indian nations rapidly began to abandon the royal cause. Up to this time the front and flanks of Burgoyne’s army had been covered with an almost impenetrable cloak of savage warriors who had closely harassed the retreating American Army, attacking small detachments and bringing Burgoyne valuable information on American movements. With the loss of most of his Indian warriors, however, Burgoyne’s position was now reversed. About the Royal Army hovered hundreds of American scouts who attacked small British units and counted in detail the numbers of men, tents, wagons, and boats in Burgoyne’s army. Thus, on September 19, Burgoyne had little accurate information on the strength or disposition of the American Army that blocked his way to Albany. A heavy fog covered both the American and British camps
that morning. While the Royal Army waited for the heavy mists to lift, they prepared to advance in three parallel columns, as they had previously done since crossing the river at Saratoga. Burgoyne’s objective that day was to move his army safely forward through the heavy forests to a position near enough to the hidden American camp to enable him to begin effective operations against the American lines.
Accordingly, on the morning of September 19, Burgoyne moved forward in three columns from his encampment in the vicinity of the Sword House. The right column under Fraser, numbering 2,830 men composed of British and German grenadiers and light infantry, together with the British 24th regiment and the irregulars, advanced along the road running westward from the Sword House to a point 3 miles distant where it then turned south. The center column, consisting of the British 9th, 20th, 21st, and 62nd regiments, was led by Burgoyne. This force, which numbered approximately 1,840 men, followed the route of Fraser for a short distance and then turned southeast at the first fork which led to the Great Ravine. Crossing the ravine, the column then turned westward in an effort to take a position parallel in line with Fraser’s column. The left column of about 3,160 men under General Riedesel, consisting of six companies of the British 47th regiment and the German regiments of Riedesel, Rhetz, Specht, and Hesse Hanau, was to advance along the
river road accompanied by the heavy artillery, the baggage train, and bateaux. They were to await the signal gun which would indicate that the right and center columns under Fraser and Burgoyne had reached the proper positions. Then, all three columns were to begin advancing toward the American camp until a strong position could be found close enough to it to serve as a base for further operations.

American scouts from the east side of the Hudson detected the forward movement of Riedesel’s column along the river road. When Gates was first advised by his scouts of the British advance, he determined to await their attack behind his breastwork. Arnold, however, insisted that the issue should be fought in the field. He reasoned that the forest would not only handicap the British from the standpoint of coordinated attack and the full use of their artillery, but it would also offer a screen peculiarly adaptable to the American style of fighting. If defeated in the field, he argued, the troops could then fall back to their entrenchments.

Finally yielding to Arnold’s wish, Gates ordered out Morgan’s riflemen, supported by Dearborn’s light infantry, to reconnoiter the position of the enemy. Moving northward along the road from Fort Neilson, Morgan divided his forces in an effort to locate the enemy. The first phase of the engagement opened about 12:30 in the afternoon when a detachment of Morgan’s men brushed with the advance guard of Burgoyne’s center column in a clearing known as Freeman’s Farm. The first volley all but wiped out the British picket. Rushing forward in hot pursuit of the few survivors, the detachment ran head-on into the main body of Burgoyne’s center column only to be driven back in turn and widely scattered. By persistent use of his “turkey call,” Morgan, however, was able to rally his men and prepare for the second phase of the engagement. Aided by the arrival of the regiments of Colonels Cilley and Scammel from Poor’s brigade, he re-formed his line in the woods along the southern edge of the 15-acre clearing.

Forming his line along the northern edge of the Freeman clearing, Burgoyne advanced to the attack with the 21st regiment on the right, the 62nd in the center, and the 20th on the left. Morgan’s men suddenly poured such a withering fire into the solidly advancing columns that the British line wavered and fell back across the clearing. Following closely, the Americans were again driven back, as the British quickly rallied their lines.

For more than 3 hours the fighting swayed back and forth across the bitterly contested clearing as each side strove desperately for a decision. Repeatedly the hard-pressed British regiments charged with the bayonet, only to be stopped short by the deadly fire of the American riflemen. Under the skillful direction of Arnold, American reinforcements were so placed as to threaten seriously to outflank the British right. Finally, when the British position had become critical, Riedesel arrived with fresh reinforcements. Throwing his men with great force against the American right, he succeeded in steadying the British line and forcing

the Americans to withdraw gradually. But for the arrival of Riedesel and the temporary absence of Arnold, who had left the field in order to obtain reinforcements, the fate of the Burgoyne campaign might well have been decided here. Approximately 4,000 Americans participated in this fight, while about 5,000 more were held inactive by Gates behind the fortified lines. The attacking American force was opposed through most of the day by the 1,800 British soldiers that composed Burgoyne's center column. It was almost dusk before Fraser's 2,800 men and the 550 German troops under General Riedesel came to Burgoyne's aid.

The first battle was thus fought under the "fog of war." Because of the great forest which shielded each army from the other, neither Burgoyne nor Gates was sure of the other's dispositions or intentions. General Burgoyne believed that the main American attack was directed against his right and thus held Fraser with the elite troops in reserve. General Gates, on the other hand, was of the opinion that the main British attack was directed against the American right along the river road and therefore held back the 5,000 American troops to defend this key pass. For this reason, the battling columns were reinforced only in a piecemeal fashion by both generals until late in the day. The contestants were thus evenly matched until dusk when Burgoyne finally ordered in regiments from both flanking columns and drove the Americans from the field of battle. The heavy, unknown forest and darkness, however, prevented any effective pursuit.

Stopped in his advance about 1 mile north of the American lines with a badly crippled army, but left in possession of the immediate field of battle, Burgoyne decided to entrench his troops in the vicinity of the Freeman Farm. There he awaited the cooperation of Howe or Sir Henry Clinton, who was then stationed in New York. He also felt the need of reconnoitering the American position as he still knew virtually nothing about it.

*View northeast from the American river batteries, showing how American cannon dominated the narrow river plain and road at this point.*
**The Battle of October 7**

Confident and self-assured as a result of their first encounter, the American troops grew restive as they impatiently awaited a further attack. Despite drenching rains, chill nights, inadequate supplies, and scanty rations, these ragged troops, who held the destiny of a nation in their hands, could still find heart to make merry at night. So exuberant was their revelry, in fact, that the sentries complained that because of the noise they could not hear the British and would find it impossible to warn their comrades if they did. In order to correct this condition, Gates had to issue an early curfew order.

Nearly 3 weeks of futile waiting brought Burgoyne no aid from either Howe or Clinton. On October 6, however, unknown to Burgoyne, Clinton did succeed in capturing the forts along the highlands of the Hudson (he reached as far north as Esopus [Kingston] on October 16). With the strength of his opponent greatly increased by the arrival of

4,000 militia reinforcements so that he was outnumbered now two to one, and, with his supplies rapidly diminishing, Burgoyne’s position became a desperate one, necessitating either an advance or a retreat. After some hesitation, he decided to risk everything on a second battle.

Accordingly, on the morning of October 7, Burgoyne ordered a reconnaissance in force to determine the nature of the ground and the advisability of a thrust at the American left. With 1,500 picked men, led by Generals Fraser, Riedesel, and Phillips, and supported by two 12-pounders, six 6-pounders, and two howitzers, Burgoyne moved out from camp about 12 o’clock and advanced toward the American left. After moving in a southwesterly direction for a distance of approximately two-thirds of a mile, the troops deployed in an open clearing where some of them foraged in a wheat field.

Extending his line for more than 1,000 yards to the west, Burgoyne occupied the southern slope of the rise of ground just north of the Middle Ravine. On the right, under the Earl of Balcarras, was stationed the British Light Infantry and the British 24th regiment, both under the command of General Fraser. In the center was Riedesel with his German contingent and batteries of two 12-pounders and two 6-pounders under Major Williams and Captain Pausch. On the left was stationed Major Acland in command of the British Grenadiers with the greater portion of the artillery. Though the larger part of Burgoyne’s front was open, both his flanks rested in woods and were thus exposed to a surprise attack. Investigating the news of the British advance, James Wilkinson, Adjutant General to Gates, found their position favorable to
attack and so reported to headquarters, whereupon Gates replied: "Order on Morgan to begin the game."

The American plan of attack was simple and direct. As Morgan undertook a flanking movement against the Light Infantry on the British right in that portion of the field farthest removed from the river, Poor was to move against the Grenadiers on the British left. Once these two movements had developed, Learned was to strike the German contingent which made up the British center. The American attack opened about 2:30 in the afternoon with Poor's savage assault upon the British left. Outnumbered two to one, the Grenadiers crumpled under the withering fire of the Americans. By this time Morgan had struck the British right. The British Light Infantry was driven back in confusion, and the right flank and rear of the troops led by Balcarres were now seriously threatened.

Before either flank could recover from its surprise, Arnold galloped impetuously upon the field, and, amidst wild cheers from his comrades, led Learned's brigade in an attack against the British center. Although without command, because he had previously quarreled with Gates over incidents of the battle of September 19, Arnold now directed the course of the fighting. By his powerful personality and his reckless dash, he inspired the men to a redoubled effort. Although they repulsed the first attack, the Germans were soon thrown into wild confusion as the result of the withdrawal of the British Light Infantry and the retreat of the British Grenadiers which exposed them on both flanks.

At this critical stage, General Fraser rode back and forth among his men in a desperate effort to encourage them to make a successful stand and to cover the now general British retreat. Noticing Fraser's activity and appreciating the value of his leadership, Arnold ordered Morgan to have his sharpshooters single him out. Among those chosen for this assignment was Tim Murphy, a rifleman of exceptional accuracy. Despite the first shots which warned him that he was the object of a concentrated fire, General Fraser refused shelter and continued to lead his men until a bullet finally found its mark. Mortally wounded, he was carried from the field.

When the Albany County militia, 2,000 strong, under the command of Gen. Abraham Ten Broeck, came up to join in the fighting, the British forces, discouraged by the loss of Fraser and the turn of events, retreated to the protection of their fortified positions. In less than an hour after the opening of the attack, Burgoyne had lost 8 cannon and in excess of 400 officers and men, killed, wounded, or prisoners. Flushed with victory, the Americans were led by Arnold in a savage attack on the Balcarres Redoubt, a position of great strength which lay on the Freeman Farm.

When repeated attacks failed to carry this position, into which the remnants of Burgoyne's flanking column had retreated, Arnold wheeled his horse and, dashing between the cross-fire from both armies, rode
This print, published in London in 1789, presumably shows the British position at the Great Redoubt. According to the inscription accompanying the original print, it also portrays a scene during Fraser's funeral. The original inscription seems to contain certain inconsistencies. Courtesy Life Magazine.
northward in the direction of the Breymann Redoubt. In front of this work he found fresh units of American troops that had circled farther to the north after the retreat of the British flanking column and had taken no part in the attack on the Balcarres Redoubt. Noticing the slack fire from two log cabins that defended the short gap between the Breymann and Balcarres Redoubts, Arnold took a part of the American forces and smashed through the gap, driving out the Canadian troops which held the cabins. Then turning northward, Arnold struck the left and rear of the Breymann Redoubt while, at the same time, the main body of the American forces assaulted it on the front. The combined attacks rapidly drove the defending German troops from the redoubt. Only darkness saved Burgoyne from complete disaster. Just in the moment of victory, as Arnold triumphantly entered a sally port of the redoubt, he was shot in the leg by a wounded German soldier. Had he died there, posterity would have known few names brighter than that of Arnold. The fall of this redoubt, which was the key to the entire British position, forced Burgoyne to order a general retreat. Colonel Breymann was killed in the assault on the redoubt that bore his name.

That night Burgoyne withdrew his army to the high ground north of the Great Ravine. Fraser’s life slowly ebbed away throughout the night, and on the evening of October 8 he was buried in the Great Redoubt, in accordance with his own request. The retreat of the army northward was held up by Burgoyne long enough to administer the last rites in an impressive ceremony as Fraser’s body was lowered into the ground. Shots from American gunners, who did not understand what was taking place, struck close and threw dust on the officiating chaplain. Early in the morning of October 9, the British Army took up its retreat to Saratoga. The British had suffered approximately 1,000 casualties in the fighting of the past 3 weeks as compared to an American loss of less than half that number.

**Retreat and Surrender**

An American force was already present on the east side of the Hudson, opposite Saratoga, thus blocking the crossing of the river. To continue the retreat northward in an effort to reach Fort Edward was now almost impossible for Burgoyne’s weary and badly depleted army. In a few days he was completely surrounded on the heights of Saratoga by the American force which, by this time, had grown to about 20,000 men. Hopelessly outnumbered, provisions all but exhausted, and devoid of hope of help from the south, Burgoyne was forced to surrender on October 17, 1777.

The remnants of Burgoyne’s army, probably numbering about 6,300 men, stacked their arms on the level flood plains along the banks of the

Hudson near the ruins of Old Fort Hardy and became prisoners of war, according to the terms of the Convention of Saratoga drawn up between Gates and Burgoyne. By the terms of surrender, they were to be taken to Boston where they would board vessels to return to England. It was provided that they would not serve again in North America during the Revolutionary War. Burgoyne, by inducing Gates to sign this convention, almost succeeded in nullifying the great American victory at Saratoga. If the terms of the convention had been carried out, Burgoyne's army would have been available for service in Europe against the French, whom the Americans were at this time desperately endeavoring to induce to enter the war on the American side; or Burgoyne's army could have been used to relieve for service in America an equal number of British troops then garrisoning posts in other parts of the Empire, thus largely repairing, within 6 months' time, the damage to the British armies in North America. The Continental Congress therefore interposed first one obstacle and then another, and the terms of the convention were never kept. The captured soldiers were held in the North for about a year, and then most of them were sent to Charlottesville, Va., for the duration of the war. The majority of these prisoners remained in this country after the close of the war and were gradually absorbed among the populace of the new nation. Many American families today can trace their origin back to the British and German soldiers who surrendered at Saratoga.

The failure of the Burgoyne expedition, so auspiciously launched, may be attributed to a series of blunders and misfortunes climaxed by the heroic defense of a despised adversary. In his failure specifically to order Howe to cooperate with Burgoyne, Germain in the very beginning laid the basis for the campaign's fatal ending. Through carelessness, this order, though prepared, was apparently never mailed and was allowed to remain tucked away in a pigeonhole. To this costly blunder was added the refusal of Howe to cooperate in the northern expedition, despite the fact that he had been informed by Burgoyne and others of the expected nature of his participation. When advised by Howe of his proposed expedition against Philadelphia, Germain approved the plan, but expressed the hope that it would be completed in time to cooperate with Burgoyne.

In persisting in the Philadelphia expedition against the advice of Clinton and other British officers who advised cooperation with Burgoyne, Howe preferred a plan of campaign which gained the British nothing to a plan which might well have won them the war. In his defense later, Howe argued that he had received no order to cooperate with the northern army; that he had warned Burgoyne not to expect aid from the south; that his move to Philadelphia had been approved by the King; and finally that he had advised Clinton to assist Burgoyne. This move of Clinton's, however, was advised so late, and with such limited force, as to make it ineffective.
This old print, after the famous painting by John Graham, portrays the burial of General Fraser. The English historian, Fonblanque, has identified the portrait figures from left to right as: Earl of Harrington, A.D.C.; General Burgoyne; Major-General Phillips; Reverend Brudenell; Captain Green, A.D.C.; Lieutenant Colonel Kingston; Major Fraser; Mr. Wood, Surgeon; Earl of Balcarres; Major General Riedesel. Courtesy Life Magazine.
As if this were not enough, Burgoyne's position was still further weakened by the inability of St. Leger to create a proper diversion along the Mohawk. These blunders and misfortunes, inherently grave as they were, do not absolve Burgoyne altogether from responsibility for the failure of the northern campaign. His conduct of the campaign, at times, lacked forceful initiative and drive, to which were added grave errors of judgment, the most serious of which, in all probability, was the poorly planned expedition against Bennington. The imperative orders given to Burgoyne by British ministers in England, with little leeway to adjust his plans according to actual course of events, was another important cause of the complete failure of the campaign. Sir Guy Carleton, then Governor of Canada, wrote in 1777: "This unfortunate event, it is to be hoped, will in the future prevent ministers from pretending to direct operations of war, in a country at three thousand miles distance, of which they have so little knowledge as not to be able to distinguish between good, bad, or interested advices, or to give positive orders in matters, which from their nature, are ever upon the change; so that expediency or propriety of a measure at one moment, may be totally inexpedient or improper in the next."

In no small sense, however, the success of the American cause may be attributed to the skill of the colonial infantry who, under the daring leadership of Arnold and Morgan, had proved themselves more than a match for the British veterans. Furthermore, the American ability to increase their numbers within a short period of time materially added to their ultimate success. A striking illustration of this was shown in the large militia enlistments which followed outrages perpetrated by Burgoyne's Indians upon the civilian populace, culminating in the tragic murder of Jane McCrea near Fort Edward on July 27. The story of this deed was quickly spread throughout the New England region.
This famous painting of the surrender of General Burgoyne at Saratoga, by John Trumbull, is of a memorial nature. It does not attempt to reconstruct the actual scene. The four figures in the central foreground are Generals Phillips, Burgoyne, and Gates, and Colonel Morgan. Courtesy Yale University Art Gallery.

and was responsible for hundreds of enlistments. Jane McCrea was on her way to join her fiance, who was a Tory officer in Burgoyne’s army, and presumably safe from danger at the time she met her pitiful fate. If Burgoyne’s own adherents were not safe from his savage allies, what was to be expected for their wives and daughters, the patriot farmers asked themselves. Many who had no interest in the Revolution as such, now considered that the safety of their homes depended upon the destruction of Burgoyne.

Guide to the Park

Saratoga National Historical Park is an area of exceptional scenic beauty, the terrain of the park being characterized by sharply rising bluffs, deep ravines, and rolling hills. Its present open clearings are in sharp contrast to its heavily wooded appearance in 1777.

Though time has left few vestiges of the American and British fortifications, an effort is being made to establish definitely their original character and position by historical and archeological research.
The Schuyler House. This building was erected in 1777 by Gen. Philip Schuyler near the site of his former home which was burned by Burgoyne. The house, situated in Schuylerville (old Saratoga), has undergone little change since it was first built.

THE AMERICAN RIVER REDOUTS. The river bluffs on which American batteries were emplaced dictated the tactics of both armies and the course of the two battles of Saratoga. The American line was anchored on these bluffs, because here the high ground converged with the river to allow only a narrow corridor along the river plain. The road south to Albany ran through this corridor. Both battles were fought as a result of the British attempt to flank the American positions controlling this passageway. This terrain factor must be appreciated if the course of events at Saratoga is to be understood.

View east from Fraser's Hill, showing the river hills beyond the Hudson and the Green Mountains and Berkshires in the distance. The Great Ravine is seen cutting through the terrain at the extreme right. Just to the left of it, on the bluffs overlooking the river, is the site of the Great Redoubt (1) where Fraser was buried and from whence the British began their retreat northward (to the left) to Saratoga (now Schuylerville).
SITE OF FORT NEILSON. Situated on the crest of Bemis Heights at the apex of the American line, stood Fort Neilson. In reality the fort was a fortified barn, named for John Neilson, the farmer who owned it. Strengthened on either side by heavy batteries and protected by a breastwork of logs and felled trees, the fort constituted a key point in the American line. The overlook from this point offers a sweeping panorama of exceptional beauty and charm. From here are visible the Adirondacks, the Green Mountains in Vermont, the Berkshires in Massachusetts, and the Catskills.

Now standing on the site of Fort Neilson is a temporary museum, the Block House, containing relics of the Revolutionary period and exhibits designed to present the story of the Battles of Saratoga and the Burgoyne Campaign.

THE NEILSON HOUSE. Located within the fortified area of Fort Neilson, the Neilson House is the only contemporary building still standing on the battlefield. This house, the home of John Neilson, served as the quarters of Generals Benedict Arnold and Enoch Poor. From this building Poor went to lead his troops in gallant action on both September 19 and October 7. It was to this building that Major Acland, of the British Grenadiers, was brought severely wounded on October 7; and it was also to this building that Lady Acland, in defiance of great hardships, came to nurse her wounded husband. The smoked walls, planked floors, and rough period furniture preserve much of the Revolutionary atmosphere.
AMERICAN POWDER MAGAZINE. On the little plateau east and below the site of Fort Neilson, near the center of the American line, is located a reconstructed stone powder magazine. From the report of Ebenezer Stevens, Major Commandant of Artillery, entitled, "Return of Ordnance and Stores in Camp near Stillwater, September 24, 1777," with a subheading, "Stores in Magazine," it has been possible to determine the exact character and quantity of the supplies located within the magazine.

FREEMAN FARM. No part of the battlefield witnessed heavier fighting than the area known as Freeman's Farm. Around this farmhouse and its oblong clearing of 15 acres, the swirling tides of battle beat relentlessly in the engagements of both September 19 and October 7. The original Freeman Farmhouse, owned at the time of the battles by Isaac Leggett, occupied approximately the site of the present building by that name. Following the battle of September 19, it was included within the fortification known as the Balcarres Redoubt. The oblong clearing ran east and west across the same small ridge on which the Freeman House stood.

BALCARRES REDOUBT. Situated on the same ridge as the Freeman Farmhouse, the Balcarres Redoubt extended approximately 500 yards in a north-south direction. The redoubt was an enclosed work mounting eight cannon, with walls from 12 to 14 feet in height and constructed of logs with earth thrown over them. The front of this work was covered with a strong abatis built of felled trees. The Balcarres Redoubt thus constituted the strongest fortification of the British line. Under the command of the Earl of Balcarres, the fortification was erected shortly after the Battle of September 19 and was occupied by the British Light Infantry. In fierce attacks, the American forces, on October 7, repeatedly

The John Neilson House. This structure, situated on Bemis Heights, is the only contemporary building remaining on the battlefield.
assailed this redoubt in vain. Arnold’s successful assault on the Breymann Redoubt, however, finally served to outflank the position and force its evacuation.

**Breymann Redoubt.** The Breymann Redoubt was situated on the extreme right flank of the British line and was erected to defend the right flank of the Balcarres Redoubt and to cover a road that ran from this point to the American camp. The Breymann Redoubt thus served as the key to the entire British position. The redoubt was constructed and defended by German troops, under command of Lieutenant Colonel Breymann, shortly after the battle of September 19. It consisted of a single line of breastworks, approximately 200 yards in length, with short flank defenses and no works in the rear. On the right, on high ground, it mounted a battery of two cannon that was captured by the Americans on October 7. The ground before the redoubt was cleared and there was no abatis before this work. The walls of the redoubt were constructed of logs and rails. The logs were laid horizontally one upon the other and were supported between upright pickets, or posts, driven into the ground on either side of the wall and fastened together at the top. The breastwork was between 7 and 8 feet in height, with an opening of about 9 or 10 inches wide, at a suitable height for small arms. It was here in the closing hours of October 7 that Arnold in a dramatic assault carried the redoubt and sealed the fate of the Burgoyne Campaign. The unique monument to Arnold’s wounded leg is located on the site of the Breymann Redoubt.

**First Line of Battle, October 7.** Situated approximately three-fourths of a mile northwest of the site of Fort Neilson and extending some 1,000 yards west of the present highway U S 4, or State Route 32, is the position which the flanking column of 1,500 soldiers under Burgoyne occu-

pied at the beginning of the American attack on October 7. Here on the southern slope of the rise of ground, just north of the Middle Ravine, the British met the full fury of the first American attack. It was in this area that General Fraser received his mortal wound and many other British officers were killed, wounded, or taken prisoner before Burgoyne ordered a retreat to the Balcarres Redoubt. The badly wounded Major Acland, commander of the British Grenadiers, and Major Williams, commander of the British Artillery, were both taken prisoners by the Americans in this area on October 7.

THE GEN. PHILIP SCHUYLER PROPERTY. Situated at Schuylerville (Old Saratoga), N. Y., this estate was the summer residence of Gen. Philip Schuyler both before and after the Battles of Saratoga. The present manor house was erected in 1777 by General Schuyler shortly after the surrender of Burgoyne’s army. It stands near the site of his former home, which was burned by Burgoyne, and it has undergone little change since it was first built. The structure is a frame house, 60 feet long by 21 feet wide, and is two stories high. The walls are filled in with brick. There are seven spacious rooms on the first floor and, in addition, a large kitchen. On the second floor there are seven bedrooms in the main part of the house and four more over the kitchen. Gen. John Stark, George Washington, Governor Clinton, Alexander Hamilton, and Lafayette were guests of the Schuylers at this house.

How To Reach the Park

The park is situated on the upper Hudson River, 28 miles north of Albany, N. Y., between the villages of Stillwater and Schuylerville, and may be reached by automobile from the north or south over U S 4, or State Route 32. From the west, convenient connections with U S 9 may be made over State Routes 9P and 423. Daily bus service is available from Mechanicville or Schuylerville. Inquire locally for schedules.
Administration

In 1938, Congress passed legislation authorizing establishment of Saratoga National Historical Park. In 1941, under this authority, 1,429 acres of historically important land, previously acquired by the State of New York, were accepted by the Federal Government for administration and protection as a national historical park project. Later, other historically significant parts of the battlefield were acquired, and the establishment of the park was accomplished on June 22, 1948. The present area is approximately 2,114 acres.

Saratoga National Historical Park is a part of the National Park System, owned by the people of the United States and administered for them by the National Park Service of the United States Department of the Interior. Communications regarding the park should be addressed to the Superintendent, Saratoga National Historical Park, R. F. D. No. 1, Stillwater, N. Y.

Related Areas

Saratoga National Historical Park is one of several areas in the eastern United States administered by the National Park Service which commemorate events significant in the American Revolution. Others in this and nearby States are: Statue of Liberty National Monument, in New York Harbor, and Federal Hall Memorial, in New York City; Independence National Historical Park Project, Philadelphia, Pa.; Morristown National Historical Park, Morristown, N. J.; and Colonial National Historical Park, Yorktown, Va.

Visitor Facilities

The park and its facilities are open from early spring until late fall, depending upon weather conditions—normally from April 1 to November 30.

A temporary museum, containing relics of the Revolutionary Period and exhibits designed to present the story of the Battles of Saratoga and the Burgoyne Campaign, is open daily, Sundays and holidays included, from 8:30 a. m. to 5 p. m. Park literature is available in the museum for distribution. The John Neilson House, used as quarters for American staff officers during the battles, is also usually open for inspection. Informational signs and markers along the various park roads assist the visitor in visualizing events connected with the battles.

Special service, without charge, is provided for school classes, civic groups, and organizations when arrangements are made in advance through the park administration.
