Wake of the Flood

The Rio Grande is a dynamic river. Often slow and unassuming, it has proven yet again that it can roar. Its vast watershed can capture weather from very far away. Every so often, a tropical cyclone spins in from the Pacific Ocean to northern Mexico. The most recent of these was named Tropical Storm Lowell. While most folks were paying attention to Hurricane Ike as it ravaged Galveston, TX, Lowell did its work in Mexico. Rain fell into the watershed of the Rio Conchos, which drains into the Rio Grande. So much water fell that the peak of the flood crested at over 33 feet. It took over a month to return the reservoirs in Mexico to normal levels. When it was all over, the newest chapter in Big Bend’s history book had been written.

Superintendent’s Message:

2008 will go down in history as the year we faced a natural event of stunning magnitude. It has been over 30 years since we saw a flood comparable to what came down the river this fall. To save some of our most recognized and precious resources such as historic buildings and endangered fish, our volunteers, partners, and staff rallied. I am proud to say that they worked successfully to protect so many of the park’s resources.

I encourage you to explore down by the river and witness the power of water as an agent of change. Flood waters were both destructive and productive. The new boardwalk nature trail at Rio Grande Village floated away. Swaths of non-native cane that used to choke the riverbank were ripped out by their roots and twisted into clumps that rolled downstream like monstrous tumbleweeds. Roarters will find their favorite camping sandbars erased, yet new ones have appeared awaiting discovery. Historic buildings crumbled a bit as water seeped into adobes. River rangers saw a cow float downstream, climb out, walk upstream, and float down again. Such is life along the Rio Grande.

Places like Big Bend belong to us all and have many stories to tell. Parks will forever for our children if we share them with each other and share in their protection. We hope that you find the experience you came here for.

Finding out where you are? The park map can help. Detail maps of the Chisos Basin and Rio Grande Village are also found here. A list of useful phone numbers for services both in and outside the park is also included.
Crossings Remain Closed

As a result of a 2002 U.S. Customs and Border Protection decision, there are NO authorized crossings in Big Bend National Park. Crossing at Boquillas, Santa Elena, or other locations along the Rio Grande is prohibited. The closest legal ports of entry are Del Rio and Presidio, Texas.

The U.S. Attorney’s Office has indicated that it will prosecute any criminal violations regarding any illegal crossings. If you re-enter the United States at any point within Big Bend National Park, you may be liable for a fine of not more than $5,000 or imprisonment for up to one year, or both.

When Visiting A Border Park

Big Bend National Park shares the border with Mexico for 18 miles. This is a remote region. Visitors should be aware that drug smuggling routes pass through the park.

If you see any activity which looks illegal, suspicious, or out of place, please do not intervene. Note your location. Call 911 and report it to a ranger as quickly as possible.

Each year hundreds of people travel north through the park seeking to enter the United States. It is possible you could encounter an individual or small group trying to walk through the park with little or no water. Please do not stop, but instead, note your location and immediately call 911 or contact a ranger as soon as possible. Lack of water is a life-threatening emergency in the desert.

Border Merchants

Mexican Nationals may approach you from across the river to sell souvenir items (walking sticks, bracelets, crafts, etc.). If you agree to look at/or purchase their items and the Mexicans cross the river, they may be arrested for being in the U.S. illegally. They will be held until deported back to Mexico through Presidio (100 miles away). Mexican merchants will be arrested for illegal commercial operations which may result in a fine and/or additional incarceration while awaiting adjudication prior to deportation.

Items purchased will be considered contraband and seized by officers when encountered. Rocks, minerals, archeological items, etc. cannot be purchased, imported, or possessed in the national park.

In addition, illegal trade impacts the resources of the park in a number of negative ways, including the creation of social trails, the cutting of cane along the river, erosion of riverbanks and an increased amount of garbage and contaminants along the Rio Grande watershed. Supporting this illegal activity contributes to continued damage of the natural resources along the Rio Grande, and jeopardizes the possibility of reopening the crossings in the future.

Sotol walking sticks and other handcrafted items made in Boquillas, Mexico can now be purchased legally at the Chisos Mountain Lodge, camper stores and the bookstore in the Panther Junction visitor center.

Entrance Fees at Big Bend National Park

Private noncommercial automobile $20 (valid for 7 days)
Single entry (foot, bike, motorcycle, etc.) $10 (valid for 7 days)
Big Bend Annual Pass $40 (valid for one year from month of purchase)
Interagency Annual Pass $80 (This pass will be valid for one year from month of purchase for entrance fees to federal public land fee areas)

All currently valid passes will be accepted until expired, including the Golden Eagle Pass, Golden Age Passport, and Golden Access Passport.

Fees: Your Dollars at Work

Why Do Parks Charge A Fee?

Much of the funding for Big Bend and other national parks comes from American taxpayers. However, protecting this land and ensuring that you have a safe, enjoyable and educational experience costs more than this tax base provides. Therefore, the U.S. Congress determined that people who use federal lands should pay fees to help offset the difference.

Where Does Your Money Go?

Twenty percent of the money collected from entrance and campground fees is redistributed to units of the National Park System that do not charge fees to assist in their upkeep and to upgrade those areas. Eighty percent of the money collected here stays in Big Bend National Park.

Hand-crafted items made in Boquillas, Mexico can now be purchased legally at the Chisos Mountain Lodge, camper stores and the bookstore in the Panther Junction visitor center.

Viewing the sunset against the Sierra del Carmen mountains is a signature Big Bend experience, underlined by the irony that the mountains aren’t a part of the National Park; in fact, they aren’t even located in the United States. In addition to defining the curve that forms the Big Bend, the Rio Grande also serves as the international boundary between the United States and Mexico. Throughout much of its history the border along the Rio Grande has often been fluid, allowing people of both countries to come and go as needed. However, the border is an artificial boundary imposed on the natural environment, and as such is subject to political and social pressures.

Increased border restrictions have led to a number of important changes that affect the international boundary in Big Bend. A visit to Big Bend is a wonderful experience to learn about the park’s history and to experience a wide variety of natural history and recreation options. The park’s border with Mexico is part of our shared landscape and a chance to experience and learn about our neighbors. A few simple steps can help keep the park safe for everyone who is here.

Why Do Parks Charge A Fee?

Much of the funding for Big Bend and other national parks comes from American taxpayers. However, protecting this land and ensuring that you have a safe, enjoyable and educational experience costs more than this tax base provides. Therefore, the U.S. Congress determined that people who use federal lands should pay fees to help offset the difference.

Where Does Your Money Go?

Twenty percent of the money collected from entrance and campground fees is redistributed to units of the National Park System that do not charge fees to assist in their upkeep and to upgrade those areas. Eighty percent of the money collected here stays in Big Bend National Park.

How Is Your Money Used?

Your entrance and campground fees help Big Bend National Park complete projects that directly benefit you and other park visitors.

Recent Projects at Big Bend Made Possible By Your Fees:

- Major expansion of the Panther Junction visitor center
- Canyon historic district exhibits

Current Projects:

- Entry Fee Trail rehabilitation project to reduce erosion
- North Rosillos/Harte Ranch wayside exhibit
- Backcountry campsite construction

Big Bend Natural History Association

ActiVets

Healing the Wounds of War with Wilderness

Big Bend Natural History Association (BBNHA) will enter its third year providing wilderness trips to wounded Iraq/Afghanistan veterans in 2009. Since its inception in 2007, BBNHA's ActiVets Program has grown into a regional program and will provide 10 wilderness trips throughout the National Park Service’s Intermountain Region (IMR) this year. Four trips are planned in Big Bend, two in Amistad National Recreation Area, and four others throughout the IMR. If you would like to sponsor a wounded veteran’s trip contact:

Mike Boren - BBNHA Executive Director
PO Box 196
BBNP, TX 79834
432-477-2236
borendon@hotmail.com

Please visit www.ActiVets.org to see our video. All donations are tax deductible.

The Big Bend Natural History Association (BBNHA) was established in 1996 as a private, non-profit organization. The Association’s goal is to educate the public and increase their understanding and appreciation of the Big Bend area and what it represents in terms of our historical and natural heritage. BBNHA champions the mission of the National Park Service of interpreting the scenic, scientific, and historic values of Big Bend and encourages research related to those values. The Association conducts seminars and publishes, prints, or otherwise provides books, maps, and interpretive materials on the Big Bend region. Proceeds fund exhibits, films, interpretive programs, seminars, museums, and research.

Join us and support your park!

Become a member and create a lasting relationship with Big Bend National Park.

Do more with your dues!

Purchase a dual annual membership in both BBNHA and the Friends of Big Bend National Park for only $100.

Member Benefits

Membership benefits include a 15% discount in BBNHA bookstores; a 10% discount on most seminars; a subscription to the Big Bend Paisano; a current Big Bend calendar; discounts at many other association bookstores in other national park sites; and the opportunity to support scientific, educational and research programs in Big Bend.

Volunteers in the Park

Volunteers are a valuable and valued part of our operation and our community. Last year over 200 volunteers contributed approximately 45,000 hours of service to Big Bend National Park. Some service groups come for a few days, other volunteers stay for months. Some are students; others are retirees looking for adventure during their “golden years.”

Most of these volunteers work in visitor centers and as campground hosts; however, volunteers also help in science and resource management, maintenance, and administration. Regardless of age or background, these folks share a desire to make a positive contribution to the preservation and management of Big Bend National Park.

Honor Roll

Join us in thanking the following individuals and organizations who have recently donated 100 or more hours in volunteer service to Big Bend:

Jim & Jan Allen
Bud & Renee Cargile
Royce & Rayann Brockett
Ed & Nancy Bump
Doug & Kay Combs
Teresa & Gary Cowan
Ed Davis

Near the base of 13,478-foot Canby Mountain in southern Colorado, melting snow feeds into streams, which eventually join to form North America’s fifth-longest river, the Rio Grande. The river collects water from a vast territory. Its branches and tributaries drain 335,000 square miles in two countries. The Rio Grande as depicted on a map, however, is very different from the Rio Grande in Big Bend.

The majority of the water in Big Bend’s stretch of the river actually comes from another river in another country. That river—the Rio Conchos—descends from the Sierra Madre of northern Mexico and adds more water to the Rio Grande where the rivers join near the border towns of Presidio, Texas, and Ojinaga, Chihuahua.

Tropical Storm Lowell, which made landfall along the Pacific coast of Mexico in September, 2008, provided the overall precipitation with an influx of water, leading to Big Bend’s biggest flood in recorded history. While considerable rain fell at the park, swelling the tributaries that flow into the Rio Grande, the heaviest downpours occurred in Mexico on the Rio Conchos watershed. Reservoirs along the Conchos filled to capacity, forcing officials there to release water downstream and into the Rio Grande. The subsequent flooding raised the water level at Big Bend from its normal two- to three-foot depth to over 26 feet.

The river was already a rich chocolate brown from early September monsoon rains, but when the flood reached its peak, the brown silt water gave the canyons and lowlands near the river a peculiar smell. Visitors to the area were greeted by an olfactory mix of stirred mud, the sulfur stink of rotting communities, and access to the river for animals and people alike. Today, the scene is quite different. Exotic invasive plants like salt cedar and giant river cane have moved in, growing in dense thickets along the river, and evicting native species. Their roots weave together in an impenetrable system, hardening the banks of the river and capturing more sediment. Consistent flows over the last few decades and exotic plants create a situation which further narrows and fills the channel, and sets the stage for more damaging floods.

Park managers are working to rehabilitate the river by removing cane and salt cedar and, in some places, replacing them with native plants. It’s a daunting task. Only one side of the river is managed by Big Bend National Park. The other side is in a different country with its own management goals and priorities; Big Bend is just a small part of the larger Rio Grande watershed where cane and salt cedar grow in abundance.

This September’s flood acted like a reset switch in some places. It cleared out banks by rippling out stands of cane and salt cedar, widened the river channel, and moved the river a bit closer to its natural state. The invasive nature of the exotics however, suggests they will likely repopulate areas cleared by the flood. Now park scientists have an opportunity to observe how cane and salt cedar repopulate an area and the impacts they create as they expand.

Park biologists also observe that channel-maintaining floods only serve to irrigate the cane and salt cedar while those plants trap more and more sediment, building up the river banks. Larger, river-scouring floods do help restore sandbars, create shallow areas for aquatic species, and clear exoticts from the riverside. With further study, park managers will be able to discover the ideal river flows necessary to maintain a healthy river system at Big Bend. Those higher flows however, depend on the release of water from upstream along the Rio Conchos and the upper Rio Grande.

From the high Rockies in Colorado, and the high Sierra Madre in northern Mexico, two rivers flow and supply water to millions of people. That water is also vital to a healthy ecosystem at Big Bend National Park. The Rio Grande is an oasis in the desert, supporting a variety of plant and animal species along its banks. Over the last few decades, the river has changed in dramatic ways. The spread of exotic invasives and the lessening annual flow have altered the river from its historic state. The September floods offered a glimpse of history, and hope for the future. With further study and international cooperation, it may be possible to restore a natural flow to the river.

The National Park Service is dedicated to the survival and protection of natural ecosystems, and perhaps, in time, the Rio Grande at Big Bend National Park will become a healthier ecosystem, saved for the enjoyment of future generations as we balance our needs with those of nature.
Chanta Gomez's granddaughter, Maria, swept her grandmother’s patio with enthusiasm every morning, raising a dust cloud that would rival a group of whirling dervishes. The prowling cloud floated toward the docks of the little fishing village sitting on the Pacific coast of Chiapas, Mexico. Chanta would say that Maria was going to cause a hurricane with her “balle de la escoba” (broom dance). Interestingly, her comment recalls Chaos Theory, which posits the possibility that significant weather events (tropical storms, hurricanes, and tornados) may be initiated by the mere sweep of a bula grass skirt or a child's broom – an insignificant event resulting in complex disorganization. Such could describe the most recent flood on the Rio Grande caused by Tropical Storm Lowell.

Maria’s cloud of dust drifted and swirled westward over the shallow shoreline toward the graying horizon, invisible, yet on a hectic dance to an unknown destination. The low pressure system building miles from the Chiapan coastline attracted Maria’s dancing cloud along with countless other dancers. Some of the dusty particles fell exhausted to the surface to become ocean detritus; some were lifted aloft for thousands of feet, rising in massive tropical clouds spinning like a twirling ice dancer unable to control direction and at the mercy of the moving system. The attendant dust and moisture added mass to Lowell’s passable as it stormed in a northeast track towards northern Mexico and west Texas. After landfall on September 11, 2008, the dancing storm’s tempo changed from a lively fox trot into a violent Apache dance, dumping its heavy moisture, and Maria’s dust, along Mexico’s Rio Conchos drainage. The massive downpour and resulting rapid run-off surpassed the capacity of Rio Conchos drainage area reservoirs, threatening dam integrity, and forcing managers to release water to relieve the pressures on the storage systems.

When Mother Nature wants to dance up a storm, it is wise to accept the offer and be ready to pay the fiddler. In anticipation of the coming rise, Big Bend National Park staff initiated an incident command system and established a flood response plan that was workable, effective, and successful due to a number of factors – smart people, hard work, and sufficient time. The plan was strengthened by sound judgment, staff commitment, and forethought…along with a good bit of luck that further area storms did not interfere with the plan.

For nearly two weeks, low-lying areas all along the river were covered by a churning layer of brown water powerful enough to up-root and carry away trees. As the water rose higher, it threatened to also carry away some of Big Bend’s history: the Alvino House below Castolon was in danger of being erased.

As floodwaters approached the foundation of this historic adobe, park staff moved in to attempt a rescue. Around the perimeter an earthen dam was constructed, covered with a tarp, and sandbagged. The water, however, crested just higher than this four foot wall. A pump was then employed to throw water back into the river until the floodwaters receded. The Alvino House survived another flood.

Why so much effort to save this one house? Unattended, adobe naturally melts back into the ground. More floods will come. The Alvino House though, is worth the time spent to preserve it.

Why so much effort to save this one house? Unattended, adobe naturally melts back into the ground. More floods will come. The Alvino House though, is worth the time spent to preserve it.

Built in 1901 by Cipriano Hernandez, and later lived in by Alvino Ybarra, it is the oldest remaining adobe structure in Big Bend National Park. It represents one of the best examples of native adobe construction. More than just a classic adobe, the house also harbors stories of the everyday life of families living along this remote reach of the Rio Grande. As well as a residence and store, it also served as the Castolon social center. Weddings, baptisms, fiestas; these all occurred here. The Alvino House was a place where a community could gather and grow.

This was not the first time efforts were made to preserve this piece of Castolon’s history. Over time, the elements attacked the dirt walls and decayed the wood vigas, causing the roof to sag. In 1994, residents of Santa Elena, Mexico, volunteered their expertise to restore the building to its former state. They made adobe bricks and replaced wood to stabilize the structure, just as their families have always done.

And so the Alvino House still stands today. One hundred and eight years after it was built, it survives as a reminder of the people who came before us. It points to a lifestyle of living off the land – of creating a home from what is available. To preserve it. To maintain it. To ensure that future generations will have a place to visit and discover what it can show you about this piece of Castolon’s history.

It points to a lifestyle of living off the land – of creating a home from the very dirt it is built upon. It is a piece of history left to explore. So take the time to visit Castolon, stop by this old adobe house, and discover what it can show you about those who came before.
Getting Ready To Roar

With the water levels threatening to rise substantially, park staff had to lash their rafts high up on the cliffs during a reconnaissance trip. The river depth changes often, but not usually by 25 feet. Park biotech saving the precious Gambusia fish that live nowhere else in the world but here. It was a mad dash to catch as many as possible with nets. Had the flood waters been only a few inches higher, they could have washed away.

In many places, the water covered all the rocks that create rapids when the river is lower. Due to the speed of the water, trips that usually take three days were completed in five hours.

This was just the beginning. Normally a leisurely float, some intrepid visitors took advantage of an opportunity that only happens every few decades to test their mettle against everything the river could throw at them. Hazards included massive sucking whirlpools, giant rolling balls of cane, rafts forced into thickets of spine-filled tree tops, along with violent rapids that seldom, if ever, were rafted by anyone in Big Bend’s history. The photo above was taken when the water had just begun to rise.

SAT SEP 06 2008
NWS NATIONAL HURRICANE CENTER MIAMI FL
NATIONAL WEATHER SERVICE BULLETIN

8:00 PM PDT - CONVENTIONAL AND MICROWAVE SATELLITE IMAGERY INDICATE THE STRONG TROPICAL DISTURBANCE LOCATED SOUTH OF MANZANILLO MEXICO HAS RAPIDLY ORGANIZED INTO TROPICAL STORM LOWELL. RAINFALL TOTALS OF 2 TO 4 INCHES IN MOUNTAINOUS AREAS OF CENTRAL MEXICO WILL BE POSSIBLE THROUGH SUNDAY...THERE IS CONSIDERABLE UNCERTAINTY IN THE LONG RANGE FORECAST.

Flood Stage

Water the color of chocolate milk seen here infiltrating the bosque at Rio Grande Village.

View from the Dorgan House near Castolon
You’ve driven many miles to get here, and have finally arrived at your destination: Big Bend National Park. But now what? Now that you’re here, how do you spend your time? Where should you go? What should you explore? The park is big, and often visitors have a limited amount of time.

One Day

The visitor centers at Persimmon Gap, Panther Junction and the Chisos Basin are excellent places to begin your visit. Park staff there can answer your questions, and exhibits provide additional orientation. If time allows, drive to the places to begin your visit. Park staff there can answer your questions, and exhibits provide additional orientation. If time allows, drive to the Chisos Basin to take in spectacular views of the Chisos Mountains. Walk the 0.5-mile self-guiding Window View Trail to get a feel for the mountain scenery and one of the best sunset views in the park.

A trip along the Ross Maxwell Scenic Drive will give you a taste of the Chihuahuan Desert and will lead you to the Rio Grande. This drive highlights the geologic spender and complexity that the Big Bend is famous for. There are many scenic overlooks and exhibits along the way. Sotol Vista, Mule Ears Overlook and Tuff Canyon are all worthwhile stops. The short walks to the Sam Nail Ranch, Homer Wilson (Blue Creek) Ranch and a visit to the Castolon Historic District will give you a glimpse into Big Bend’s past.

A highlight is the short walk into Boquillas Canyon—one of Big Bend’s most scenic spots. Travel to the end of the Boquillas Road near Rio Grande Village to access the trailhead. The trail affords a good view of the small Mexican village of Boquillas, thought to be named for the small cave-like holes in the cliff that look like little mouths (‘bocas’ in Spanish). Perhaps you will see Singing Victor standing on a sandbar, known to regale rafters with song. Just remember that it is illegal to purchase items from Mexican nationals.

Three Days

With three days to spend in the park, you can explore the major roads more thoroughly and still have time for hiking. In the Basin area, consider hiking the Window Trail (5 miles round trip) or the Lost Mine Trail (4.8 miles round trip); consult the Hiker’s Guide to Trails of Big Bend National Park, for sale in park visitor centers, for trail descriptions.

In addition to the Basin and Ross Maxwell Scenic Drive (see suggestions for “one day”) you can drive to Rio Grande Village, perhaps stopping at Dugout Wells along the way to walk the short Chihuahuan Desert Nature Trail. Many visitors are unaware that there is an enjoyable three-mile trail from Daniel’s Ranch to the Hot Springs. It follows the river. Alternately, the historic Hot Springs can be reached via an improved dirt road (not recommended for ‘dodger’ pickups or RVs).

The famous Balanced Rock can be found at the end of the Grapevine Hills Trail. A 15-minute drive down the Grapevine Hills dirt road will take you to the trailhead. While mostly easy, there is a steep section at the end where the balanced rock is located. A good time for pictures is the early morning or late afternoon.

One Week

With a week or more to spend in Big Bend, endless possibilities are open to you. You’ll have plenty of time to explore the roads mentioned in the previous sections, and will also have time to drive some of the “primitive” dirt roads. For these, you’ll need a high clearance or four-wheel drive vehicle. Always check at visitor centers for current road conditions, and carry appropriate gear.

The River Road, Glenn Springs Road and Old Ore Road are some of the more popular primitive roads. A visit to Ernst Tinaja near the south end of the Old Ore Road is a Big Bend highlight. The Pine Canyon Trail, located at the end of the primitive Pine Canyon Road, is an excellent hike to experience firsthand the transition from desert to mountains.

If you don’t have high clearance or four-wheel drive, improved dirt roads such as the Old Maverick Road, Dagger Flat and Grapevine Hills will get you “off the beaten path.” Hike the Chimneys Trail, or Grapevine Hills Trail for a closer look at the desert environment.

If you’d like to explore the Chisos Mountains, trails to Root Canyon, Emory Peak and the South Rim offer good views of the park and take you into another world which seems far removed from the desert. There are plenty of opportunities for overnight backpacking along these trails. A backcountry use permit is required and can be obtained at park visitor centers.

Floating the Rio Grande

If you have the time and a spirit of adventure, you may want to consider a river trip. Seeing the park’s canyons from the middle of the Rio Grande is both fascinating and gratifying. There are many possibilities, from half-day floats to extended seven-day excursions. Park Rangers can recommend a trip that meets your abilities and interests. Outfitters and equipment rental companies are listed on page 16. See “Backcountry Planning” on page 14 for additional information.

Backcountry roads

If you have a high-clearance or four-wheel drive vehicle, Big Bend’s backcountry roads call for further exploration. There are over 200 miles of dirt roads in the park. Improved dirt roads like the Dagger Flat and Grapevine Hills roads are usually in good condition and accessible to normal passenger vehicles, except following rainstorms. Unimproved dirt roads, such as the Old Maverick Road, Old Ore Road, or the River Road, generally require high-clearance vehicles and/or four wheel drive. Always check current road conditions at a visitor center before traveling any of the park’s primitive roads. Standard backcountry road conditions are listed on page 14.

Enjoying Your Visit

No matter how limited your time in Big Bend, remember that you will enjoy the park more if you stop your car and explore on foot. That doesn’t mean that you have to hike miles on steep grades; there are many short, easy walks and roadside exhibits where you can stretch your legs and enjoy the sights, smells and sounds of the Chihuahuan Desert.

Hiker’s guides and road guides are available at visitor centers throughout the park, and they offer more detailed information about Big Bend’s trails and roads. Attending ranger-led walks and evening programs are also good ways to learn more about Big Bend, check at the visitor centers and park bulletin boards for current activities.

Remember, you will NOT be able to see everything on this trip. You will probably enjoy the park more if you choose a few spots and explore them thoroughly to get a taste of what Big Bend has to offer. Then, come back again sometime to see the rest!
Take a Day Hike on Big Bend Trails

From the 7,832 foot (2,387 m) summit of Emory Peak, to the banks of the meandering Rio Grande, visitors will find over 200 miles of hiking trails in Big Bend National Park. Trails range from strenuous primitive routes through rugged desert backcountry to short handicapped-accessible pathways. Whatever your style of hiking, you can find it in abundance in Big Bend.

On this page are descriptions of some of the most popular easy and moderate hiking trails, divided by the geographic areas of the park. Most of these trails are perfect for shorter day hikes of up to several hours.

Smoking is prohibited on all trails in the Westside.

Looking for more hikes and information?

For information on longer, more challenging routes, or to plan an extended backpacking trip, stop by any park visitor center. A large selection of maps and trail guides are available and park rangers can assist you with trip preparations and backcountry permits. Visitor center bookstores carry a large selection of maps and guides. Below are a number of items that can assist in planning your Big Bend adventure.

- **Hiker's Guide to Big Bend National Park**
  - Updated in 2005. Covers all major trails in the park, from short self-guiding nature trails to strenuous backpacking routes. $1.95
  - Guide to backcountry roads
  - Updated in 2004. Detailed mileage logs of Old Ore Road, Glenn Spring Road and River Road. Good descriptions of historic sites and scenery. $1.95
  - Guide to paved and improved dirt roads
  - Describes points of interest visible from all paved and improved dirt roads in the park. $1.95

- **Chisos Mountains Trails Trail Map**
  - A topographic map that includes all trails in the Chisos Mountains. Includes trail lengths and descriptions. 99¢

Hiking Big Bend
In collaboration with National Park rangers, Laurence Parent has compiled a comprehensive guide to 44 of the most popular hikes. Photos show terrain and views. Describes difficulty, elevation changes, and maps needed. Also includes three hikes in Big Bend Ranch State Park. $14.95

### Featured Hike

**Pine Canyon**

Distance: 4 miles (6.4 km) round-trip

Overview: Moderate hike with some shade in the morning and late afternoon. Steep ascent at the end.

Of all the trails at Big Bend National Park, the Pine Canyon Trail may be the park’s leader in terms of sheer surprise value. Visitors who have not previously hiked the trail will be stunned to discover a lush forest secluded within a vast desert. Inside this small forest, rare trees that can only be found in this part of the country stand alongside coniferous giants more often associated with cool, northern climates.

To get to the trailhead, you need a high clearance vehicle. Take the Glenn Springs Road near Nugent Mountain, then turn right onto the Pine Canyon Road after 2.5 miles. Proceed for 4.4 miles past the Pine Canyon campsite until you reach the small parking area and trailhead. Along the way, feast your eyes on the spectacular geology of the eastern Chisos Mountains.

The trail is a four-mile roundtrip. Along the trail, hikers will find that the sotol-rich grassland typical of the Chihuahuan desert in Big Bend transitions to something far more verdant and green. Increasing numbers of trees begin to appear and the wooded canyon that is the highlight of the trail becomes visible.

Why is this forest here? Above the canyon’s thick vegetation, notice a high protective rim of volcanic stone. This rim creates shade in the morning and evening as it blocks direct sunlight from scorching the ground. The protective shade cuts out just enough sunlight during the day that soil moisture is higher and temperatures lower than can be found in the nearby desert. The effect of this shade is almost imperceptible to us, but to the trees, an ancient volcanic bulwark has created a climate oasis.

The first trees found along the trail are primarily pinyon pines and weeping junipers. As hikers transition to the shade zone, Big Bend’s famous Texas madrones appear. These unique trees shed their bark in crimson sheets to reveal a beautiful cream-colored inner bark. Because they are fairly rare, the number of trees found in Pine Canyon is sure to amaze. Further along the canyon, tall Arizona pines come into view. Closely related to ponderosa pines, Arizona pines trees tower over all of the other trees found in the canyon. Toward the end of the canyon, the trail gains a considerable amount of elevation, and ends at a large dry waterfall.

If you decide to make the trek through Pine Canyon, be mindful of the delicate environment found inside of it. Pine Canyon represents one of the few areas in the Chihuahuan desert where this type of ecosystem exists.
“Big Bend has probably the most pristine night sky in terms of its absence of human light pollution of any park in the contiguous 48 states.” So read a report to the park superintendent from the National Park Service Night Sky Team in 2003. Formed in 1999 to address the loss of night sky quality in national parks, the Team visited Big Bend National Park in 2003 and in 2007. Using special camera equipment, they took panoramic photos from a desert location and from the top of Emory Peak, the highest point in the park. Their photos confirmed that Big Bend’s remote location protects its night skies from the artificial light of cities. This recognition of our naturally dark skies verifies what many visitors and amateur astronomers have known for years. Big Bend National Park is a great place to see starry skies! Researchers and casual stargazers alike rave about the quality of the night sky over the park.

The Night Sky Team’s report also came with a challenge, however, for it went on to note that the only light pollution noticeable came from developments within the park itself, particularly the Chisos Basin. A follow-up survey of exterior light fixtures throughout the park found that only 18% of our 900-plus lights are properly shielded. In addition to polluting our views of the night sky, these improperly-shielded lights also waste energy and money and can negatively affect wildlife behavior.

Improving the park’s many light fixtures takes planning, time, and money. The park and our concessioner, Forever Resorts, have received a grant from the National Park Foundation and a donation of $50,000 from the Friends of Big Bend National Park for this project. We have partnered with Musco Lighting, a company that specializes in energy-efficient, low-impact outdoor lighting, to design improved fixtures and provide many of the materials. Work will begin in 2009 and will initially focus on the Panther Junction headquarters building and gas station and on facilities throughout the Chisos Basin. New lighting designs will still illuminate the facilities necessary for visitor and staff safety, but will eliminate the glare and misdirected light that impair our ability to see at night and ruin our view of the night sky. These new designs will also be more energy efficient, saving taxpayers’ money.

Other national parks have taken similar steps to protect their night skies. For instance, Natural Bridges National Monument in Utah worked with the Night Sky Team to evaluate every exterior light in the park and to then modify more than 80% of them. They added shields to direct light downward and even installed motion sensors on some fixtures. Switching to compact fluorescent bulbs reduced stray light and costs. The International Dark-Sky Association has received a grant from the National Park Service and funds from the National Bridges National Monument to design improved fixtures and to modify over 80% of the lights.

“The Big Bend National Park already meets two of these three qualifications: our clear, dark skies provide excellent stargazing opportunities, and our interpretive staff present astronomy programs throughout the year. Perhaps our renovated lighting will enable us to also earn the title of International Dark-Sky Park.”

“We're hopeful that these changes will enable more visitors and park residents to enjoy Big Bend’s world-class night skies,” said park superintendent Bill Wellman. “We’re grateful to our donors and partners for their assistance in protecting this resource.”

Birds and Birdwatching

Park Ranger Mark Flippo

In this issue of the Paisano we have highlighted the record fall season flood event of 2008. A flood of a different kind is now approaching, as the spring migration of birds will soon descend upon the park, bringing a tremendous diversity of birds. Of the 452 species on the official park checklist, almost 190 (42%) are migrants that pass through the region to breeding grounds farther north. Such diversity offers much to those who plan their vacations around the potential for viewing birds.

The annual spring migration begins in late February. Through March and April the number of migrants increases steadily until peaking in the last two weeks of April and the first week of May. In this flood of birds are many neotropical migrants returning from wintering ranges in Latin America, including Townsend’s, hermit, and black-throated gray warblers. Among the expected passage migrants comes the occasional rare and accidental species that have wandered off their normal course or are pushing the extreme edge of their normal range. Last spring a very rare northern pygmy owl was found in the Pinnacles Pass and Bart’s sparrow made appearances at Rio Grande Village and Sam Nail Ranch.

Also arriving in spring will be neotropical species that nest in the park, including some Big Bend specialties. The much-sought Colima warbler may arrive as early as mid-March, but typically isn’t on territory in the high Chisos until the first weeks of April. In your search for Colima warblers, keep an eye out for other interesting birds, including blue-throated hummingbirds, cordilleran and dusky-capped flycatchers, painted redstarts, and black-chinned sparrows, all possible in the forested canyons of the high Chisos mountains. Lucifer hummingbirds generally arrive in late March, and can be found feeding on early-blooming ocotillos in the foothills of the Chisos and lower surrounding desert. The first two to three miles of the Blue Creek Trail has been a reliable area to find this little hummer in early spring, as well as being a great place to find gray vireos and varying buntings.

If you are limited for time, head to the river (including Rio Grande Village and Cottontwood Campground). Nearly 75% of all the listed species have been observed in riparian areas. Gray, common black, and zone-tailed hawks are all probable in cottonwood areas along the river during the spring. The diversity of flycatchers there is high, from the unmistakable and eye-stopping male vermilion flycatcher to noisy Cassin’s, western and tropical kingbirds. Among the most colorful birds, male painted, lazuli and indigo buntings are most easily seen along the river, as is an impressive display of orioles, including orchard, Bullock’s and hooded. Whether from a trail or a canoe, birding the river will be productive.

Dusky-capped Flycatcher (Myiarchus tyrannulus)
There really are no problem animals—only problem people. Carelessness can kill. Don’t be responsible for the death of a wild animal. Your actions affect both Big Bend’s wildlife and future park visitors. With your help, wildlife and humans CAN live safely together in Big Bend National Park.

**Mountain Lions**
Solitary and secretive, the mountain lion is Big Bend’s top predator, and is vital in maintaining the park’s biological diversity. Everywhere you go in Big Bend, you are in the territory of at least one lion. From mountain to desert, biologists estimate that the park has a stable population of approximately two dozen lions. Within the delicate habitats of the Chihuahuan Desert, mountain lions help balance herbivores and vegetation. Research shows that these large predators help keep deer and javelina within the limits of their food resources. Without lions, the complex network of life in Big Bend would certainly be changed.

Each year, an average of 130 sightings of mountain lions are reported by the visiting public within Big Bend National Park. While over 60 percent of these sightings were along park roadways, encounters along trails have also occurred. Mountain lions roam throughout the park, including the Chisos Mountains, where they sometimes use man-made trails. The best plan of action is for you to be aware of your surroundings. Watch children closely; never let them run ahead of you. Avoid hiking alone or at dusk and dawn.

A free brochure with more information about mountain lions is available at all visitor centers.

**Javelinas**
For many visitors to Big Bend National Park, seeing a javelina (pronounced hav-uh-LEE-nuh) is a new experience. These curious creatures, also known as collared peccaries, are only found in the United States in Texas, New Mexico, and Arizona. They are covered with black, bristly hairs and generally weigh between 40 and 60 pounds. They usually travel in groups called bands that consist of 10-25 individuals. Peccaries have a highly developed sense of smell, but very poor vision. Physically, javelinas resemble pigs, but in reality, they are not closely related to pigs at all and have been genetically distinct from them for millions of years.

A javelina’s diet includes prickly pear cactus, grasses, mesquite beans, piton pine nuts, fruits, berries, and seeds. Unfortunately however, many javelinas now include human food as part of their diet.

Every year we are seeing more and more campsites in the park raided by javelina. Although normally not aggressive, they can be when food is involved. Protect yourselves and the javelina by properly storing all your food inside a vehicle or in the food storage lockers provided in the campgrounds. Do not leave coolers or food boxes unattended on picnic tables or in a tent. Flatten tents when you are away from your campsite. It is important that you take all steps to keep javelinas away from your campsite.

A free brochure with more information about javelinas is available at all visitor centers.

**Black Bears**
The return of black bears to Big Bend National Park is a success story for both the bears and the park. Native to the Chisos Mountains, bears disappeared from this area by the 1940s. After an absence of nearly fifty years, bears began returning to the park from Mexico in the late 1980s. Today, wildlife biologists estimate that between 15-20 black bears may live in the park.

Black bears are omnivorous; their normal diet is comprised of large amounts of nuts, fruits, sotol and yucca hearts, and smaller quantities of small mammals, reptiles, and carrion. Bears normally avoid humans, but bears that learn to get food from human sources often become aggressive in their attempts to get more “people” food. Rangers may have to kill bears that lose their fear of people and endanger humans in their attempts to get our food.

Big Bend has made it easy to keep edible items away from bears. Campers at the Chisos Basin Campground, at High Chisos backpacking sites, and at some primitive roadside campsites will find bearproof storage lockers for storing all edibles. Hard-sided vehicles are also suitable for storing edible items. All dumpsters throughout the park are bearproof, as well.

A free brochure with more information about black bears is available at all visitor centers.
Information and Services

Ranger Programs
Join a park ranger for a guided hike, evening slide show, talk, or workshop on Big Bend's natural and cultural history. These free programs are offered most days. Consult the Interpretive Activities Schedule posted on visitor center and campground bulletin boards for more information.

Camper Stores
Forever Resorts Inc., operates camper stores year-round at three locations in the park: Castolon, the Chisos Basin, and Rio Grande Village. Groceries, camping supplies and souvenirs are available in all locations. The gas station at Panther Junction also has a limited selection of groceries.

Banking
There are NO banking facilities in Big Bend National Park. ATMs are located in the park at the Chisos Mountains Lodge and the Rio Grande Village Store. The nearest bank is located in Study Butte, 26 miles west of park headquarters. Most stores accept major credit cards; however, some local services accept only cash. It is advisable to have small bills ($5, $10, $20) as larger bills are often difficult to change.

Gas Stations
Gasoline is available at two locations in the park operated by Forever Resorts Inc. The Panther Junction station offers gas and diesel, and can undertake minor repairs. The gas station at Rio Grande Village also provides propane.

Post Office
A full-service Post Office is located at the Panther Junction headquarters, across the porch from the visitor center entrance. A mail drop is also available in front of the Chisos Basin store. Open M-F daily 8am - 5pm and 8-2:30pm except federal holidays.

Showers and Laundry
Public showers and laundry facilities are located at the Rio Grande Village store.

Camping

Tent Camping
The National Park Service operates campgrounds at Rio Grande Village, the Chisos Basin, and Castolon. The cost is $14.00 per night for a site. Campsite fees can be paid in US currency, personal checks, or credit card. Generator use is limited: from 8:00 am to 8:00 pm daily. A no-generator use area is also designated.

The only hookups available in Big Bend National Park are at Rio Grande Village in the 25-site, Rio Grande Village RV Park operated by Forever Resorts Inc. Although there is no size restriction, your vehicle must be equipped with water and electrical hookups as well as a three-inch sewer connection. Register at the store. No advance reservations.

Near the RV park is the 100-site Rio Grande Village Campground operated by the National Park Service. Water, flush toilets, and a dump station are available. Set in a large grove of cottonwoods, the campground is adjacent to the Rio Grande. Many of the sites are pull-throughs. Generator use is limited from 8:00 am to 8:00 pm daily. A no-generator use area is also designated.

The 60-site Chisos Basin Campground is rugged and hilly. The sites are small and most are not suited to recreational vehicles or trailers. The road to the Basin is steep and curvy, especially at Panther Pass—the road's highest point. The road into the campground is a 15 percent grade. Trailers longer than 20 feet and RVs longer than 24 feet are not recommended.

Big Bend’s unpaved roads are generally unsuitable for RVs and trailers. Overnight camping in any primitive site requires a backcountry permit, which can be obtained in person at park visitor centers up to 24 hours in advance (see page 14 for more information).

Group Camping
Groups of 10 or more are eligible to reserve a spot in one of the park’s Group campsites at the Rio Grande Village, Chisos Basin, and Cottonwood Campgrounds. Group sites are reservable year round and reservations may be made 360 days in advance through recreation.gov.

Camping Limits
It is understandable that visitors may want to stay here in Big Bend forever. But, the park must be shared, so the park has instituted the following limits. Visitors can stay in the park only up to 14 consecutive nights, whether in a front or backcountry site, with a limit of 28 total nights in the park in a calendar year. Campers may occupy a specific site up to 14 total nights in a year. Between February 1 and April 15, visitors are limited to 4 total nights in the park.

$7.00 with an eligible Federal Recreation Pass

A summer thunderstorm.

Limited cell phone coverage is available in the Big Bend area. Do not depend on your phone to work in the Chisos Basin or remote portions of the park.

Public Phones
Public phones are located at visitor centers, campgrounds, camper stores, and the Chisos Mountains Lodge.

Cell Phones
Limited cell phone coverage is available in Big Bend.

Recycling
Please use the recycling cans provided in campgrounds, around stores, and near visitor centers. On average, the park recycles around 100,000 pounds of aluminum, cardboard, glass, plastic, metal and other materials each year. Each pound of material that can be recycled means one less pound buried in the park landfill. Please recycle!

Accessibility
All visitor centers are accessible. Wheelchair-accessible campsite and restrooms are located in the Chisos Basin and Rio Grande Village Campgrounds. The Chisos Mountains Lodge restaurant is accessible, as are some motel rooms. A Telecommunications Device for the Deaf is available at park headquarters. Employees with sign language abilities may be available. Some ranger-led programs are also accessible. The Window View Trail is paved and fairly level. A brochure on accessibility is available at all visitor centers.

Campsite Reservations
Forty-three (43) sites at Rio Grande Village campground and twenty-six (26) sites at the Chisos Basin campground are reservable from November 15 to April 15 each year. Visitors may make reservations for the period of November 15 through April 15 up to 180 days in advance. All remaining campgrounds in these two campgrounds and the entire Cottonwood campground remain on the first-come first-serve basis.

Campsite reservations may be made by calling 1-877-444-6777 or on-line at recreation.gov.

Campfire restrictions at the Chisos Basin and Cottonwood Campgrounds. Group sites are reservable year round and reservations may be made 360 days in advance through recreation.gov.

Fires
Ground fires and wood fires are prohibited throughout the park. Use only gas stoves or charcoal within a BBQ grill. Pack out all evidence of use, including ash. In the backcountry, charcoal fires are only allowed at roadside campsites and are prohibited in the High Chisos or zone camping areas.

Camping

All park campgrounds can accommodate trailers and RVs, but vehicle lengths have a great deal to do with safely reaching the campground and finding a suitable space.

Camping is also available at primitive backcountry campsites in the Chisos Mountains and along backcountry roads. High-clearance or 4-wheel drive personal checks, or credit card. Camping is also available at primitive backcountry campsites in the Chisos Mountains and along backcountry roads. High-clearance or 4-wheel drive personal checks, or credit card. Camping is also available at primitive backcountry campsites in the Chisos Mountains and along backcountry roads. High-clearance or 4-wheel drive personal checks, or credit card.

Mountains Lodge. Groceries, camping supplies and souvenirs are available in all locations. The gas station at Panther Junction also has a limited selection of groceries.

Lodging
The Chisos Mountains Lodge, operated by Forever Resorts Inc., is located in the Chisos Basin at 5,400 feet elevation. The lodge offers 72 rooms, plus a gift shop and dining room. For reservations or more information, please call 432 477-2291 or visit their website at www.chisosmountainslodge.com

Generator use is limited: from 8:00 am to 8:00 pm daily. A no-generator use area is also designated.

Largest campground; shady sites. Laundry and showers nearby.
Big Bend is for Kids

Explore!
Big Bend's habitats range from the Chihuahuan Desert to the Rio Grande to the Chisos Mountains, and all are rich with plants, animals, and stories of human history, giving children plenty of opportunity to explore.

Kids visiting the park enjoy the exhibits and relief map of the park at the Panther Junction Visitor Center, the Fossil Bone Exhibit area, the Hot Springs, the sand dune in Boquillas Canyon, the mountain lion exhibit at the Chisos Basin Visitor Center, and the hands-on exhibits at the Castolon Visitor Center.

Get kids involved in ranger-led programs. These include guided hikes, slide programs, bird walks, and explorations of various park features. Check the schedule at any visitor center to make sure you take advantage of all the available programs. Stop by any visitor center for further suggestions.

Hike a Trail!
Many park trails are suitable for families. Consult the listing of Easy and Moderate Hikes on page 9. For children in strollers, consider the Window View Trail, a paved ¼-mile loop trail that begins at the Chisos Basin trailhead. Remember to watch children closely and never let them run ahead or lag behind.

Be Safe
Be sure to talk to your children about safe behavior before you begin hiking or exploring the park. Require children to walk with adults, rather than by themselves. Keep all your children with you and stand as a group. Desert vegetation can be sharp; have a first aid kit and tweezers handy. Please see pages 15 and 15 for additional safety information.

Big Bend is a land of extremes. Plan on high desert temperatures in the summer with little to no shade, in the winter freezing temperatures are possible in the Chisos Mountains. Schedule your visit to avoid peak season. Visit in small groups. Split larger parties into groups of 4-6. Use a map and compass to eliminate the use of marking paint, rock carvings or flagging.

Travel and Camp on Durable Surfaces
Durable surfaces include established trails and campsites, rock, and gravel. Protect riparian areas by camping at least 100 yards from springs, creek beds, and tinajas. Good campsites are found, not made. While on the trail, walk in single file in the middle of the trail, even when wet or muddy. Keep campsites small. Focus on areas where vegetation is absent.

Dispose of Waste Properly
Pack it in, pack it out. Inspect your campsite and rest areas for trash or spilled foods. Pack out all trash, leftover food, and litter. Deposit solid human waste in cat-holes dug 6 to 8 inches deep at least 1/4 mile from water, camp, and trails. Cover and disguise the cat-hole when finished. Pack out toilet paper and hygiene products.

Leave What You Find
Preserve the past. Examine, but do not touch, cultural or historic structures and artifacts. Leave rocks, wildflowers and other natural objects as you find them. Avoid introducing or transporting non-native species. Do not build structures, furniture, or dig trenches.

Minimize Campfire Impacts
Campfires are not allowed in Big Bend National Park. In order to cook foods you may use a backpacking stove, portable fuel stove or the barbeque grills in your campsite.

Respect Wildlife
Observe Big Bend’s wildlife from a distance. Do not follow or approach them. Never feed wild animals. Feeding wild animals damages their health, alters natural behaviors, and exposes them to predators and other dangers. Protect wildlife and your food by storing rations and trash securely. Pets are not allowed in the backcountry or on trails. Keep them on a leash at all times.

Be Considerate of Other Visitors
Respect other visitors and protect the quality of their experience. Be courteous. Yield to other users on the trail. Step to the downhill side of the trail when encountering pack stock. Take breaks and camp away from trails and other visitors. Let nature’s sound prevail. Avoid loud voices and noises.

Leave No Trace in Big Bend

Plan ahead and prepare

Remember, desert heat is deadly. Do NOT leave your pet alone in a vehicle. Pets are not allowed on trails, off roads, or on the river.

Pets in the Park

What Not to Do
"I led a bird walk at Rio Grande Village this morning. A woman asked if she and her dog could join our hike. When I told her that she was welcome but the dog was not, she led the poole to a picnic table and joined the group. After the hike, as we approached the woman's campsite, instead of finding “Fifi” yawping away at us, we discovered only its remains. A javelina was just completing a poodle-dinner." - Ro Waaser
Chief Naturalist, 1970

Pets in a Wilderness Park

Having a pet with you will limit your activities and explorations in the park. In addition, desert temperatures and predators are a serious threat to your pet's well being. Please keep in mind the following points when bringing a pet to the park:

- A National Park is a refuge for the animals and plants living within it. Even if your pet doesn't chase animals, dogs present the image and scent of a historical predator. The result is stress on native wildlife.
- Keep your pet on a leash no longer than six feet in length (or in a cage) at all times. Pets are not allowed on park trails, or anywhere off established roads. Pets may not be left unattended in the park.
- Pet etiquette and park regulations require that you always clean up after your pet and dispose of waste in trash receptacles.
- Predators such as coyotes, javelinas, and mountain lions CAN and DO kill pet dogs. Even large dogs cannot defend themselves against such predators.

Kennels

The following kennel and veterinary services operate in the greater Big Bend area:

Alpine Veterinary Clinic
Alpine, Texas
(432) 837-3888

Alpine Small Animal Clinic
Alpine, Texas
(432) 837-5416

Pets Not to Do

Is there any place to swim in the park?
At the risk of repeating the obvious, Big Bend is a desert park; water is a precious commodity here and often difficult to find. Swimming in the Rio Grande is not recommended. See page 15 for important water safety information. The end of the Boquillas Canyon Trail and the Santa Elena Canyon trailhead area may be suitable for wading at certain times of the year (always check river conditions first). You can soak in the 102°F Hot Springs (near Rio Grande Village). When the Rio Grande rises due to rain, the hot spring becomes submerged.

If you really want to swim, Balmorhea State Park (about a three-hour drive north of Big Bend) boasts the “world’s largest spring-fed swimming pool.” Contact Balmorhea State Park at 432 375-2370 for more information.

Become a Junior Ranger!

Learn desert secrets, identify the parts of a cactus, and discover what javelina eat! The Big Bend Junior Ranger program is designed for kids of all ages. Through activities, games, and puzzles, kids can have fun as they learn about the park. They can also earn a badge or patch, a bookmark, and a certificate.

The Junior Ranger Activity Book costs $2.00 and is available at all park visitor centers.

Pet etiquette and park regulations require that you always clean up after your pet and dispose of waste in trash receptacles.

Pack it in, pack it out. Do NOT leave your pet alone in a vehicle. Pets are not allowed on trails, off roads, or on the river.

Remember, desert heat is deadly. Do NOT leave your pet alone in a vehicle. Pets are not allowed on trails, off roads, or on the river.

The Big Bend Paisano 13
Backcountry Planning

Getting a Permit
A permit is required for all river use, horse use, and overnight backcountry camping, and can be obtained in person only, up to 24 hours in advance of the trip. Permits can be written for as many as fourteen (14) consecutive nights in the backcountry. Park staff can assist you with trip planning based on your needs and current trail conditions. Permits can be obtained at all visitor centers during normal operating hours.

Overnight Use Fee
A $10-per-permit fee is required for all overnight backcountry use permits, including multi-day river trips, and overnight backcountry camping. This fee is payable when the permit is issued, and all funds collected go to projects to improve or protect the backcountry experience, including hardening/improving river access points, backcountry campsites, and trail maintenance.

Plan Ahead
Detailed information on backcountry campsites in the Chisos Mountains and along the backcountry roads is available on the park’s website at www.nps.gov/bibe. A variety of maps, books, hiking guides and river guides is available for purchase at park visitor centers. If you would like to order them in advance of your trip, call the Big Bend Natural History Association at 432-477-2336 or visit their online bookstore at www.bighillbookstore.org.

Floating the Rio Grande
The Rio Grande follows the southern boundary of Big Bend National Park for 88 miles. In this distance it has carved three major canyons, Santa Elena, Mariscal, and Boquillas, which have rapids varying in difficulty from Class I to Class IV. Between the canyons, the river is generally slower-paced. The Rio Grande Wild and Scenic River extends downstream beyond the park boundary for an additional 127 miles.

If you plan to take a river trip in Big Bend National Park, you may bring your own equipment, or you can hire a guide service. Three local companies (see page 16 for telephone numbers) provide guide service in the park—you may reserve a trip by contacting them directly. If you plan to use your own equipment, you must obtain a permit at a park visitor center. Stop by the Panther Junction Visitor Center for your permit and for current river condition information prior to your trip.

Permits for the Lower Canyons of the Rio Grande Wild and Scenic River may be obtained at the Persimmon Gap Visitor Center. Permits for floating Santa Elena Canyon may be obtained at the Barton Warnock Center in Lajitas. However, we encourage all parties to get their permits at a park visitor center when possible, to obtain the most up-to-date river information and conditions.

Backcountry Water
The dry desert air quickly uses up the body’s water reserves. Each hiker should carry and drink a minimum of one gallon of water for each day they are in the backcountry. Spigots for drinking water are available at all visitor centers. Big Bend is a desert environment. Springs and tinasaj (depressions in rock where water collects) are rare and often unreliable. Water should be filtered. Every gallon removed from backcountry water sources is one less for the wildlife which depend on them. Please carry enough water to supply your own needs—don’t risk your life by depending on desert springs. Catching water is recommended for extended hiking trips in the desert.

Horses
Visitors are welcome to bring and use their horses in the park. A stock-use permit is required and may be obtained in person at any of the park’s visitor centers up to 24 hours in advance of the trip. Every horse user should obtain a copy of the regulations regarding use of horses in the park.

While horses are not permitted on paved roads or road shoulders, all gravel roads are open to horses. Cross-country travel is permitted in the park, except in the Chisos Mountains. The Chisos Mountain and Burro Mesa trails are day-use only.

Hiking & Backpacking
Big Bend National Park offers over 200 miles of hiking trails in the Chisos Mountains and desert terrain. A permit is required for all overnight trips in the backcountry. Decide how much distance you want to cover and how much time you have. Desert hiking can be unpleasant or deadly in hotter months.

In the Chisos Mountains, the Southeast Rim Trail and a portion of the Northeast Rim Trail from the Best Canyon/Southeast Rim junction are closed during the peregrine falcon nesting season (February - May 31).

Zone camping permits are available for those who wish to camp outside of the Chisos Mountains. The park is divided into a number of zones ranging from areas along popular trails to extremely isolated areas.

Backcountry Roads
For those who wish to camp in the backcountry without having to backpack, Big Bend offers over seventy primitive campgrounds along backcountry roads. While some sites are accessible by most vehicles, a high clearance and/or four wheel drive vehicle is necessary to reach others. Other than a nice view, isolation, and a flat gravel surface, these sites offer no amenities and no shade. A backcountry permit is required to use these sites.

Always inquire at a visitor center regarding updated road conditions before heading out, and be prepared for all types of weather conditions (such as heavy, or any rain may cause road conditions to deteriorate). Remember: all vehicles must be street legal and stay on established roadways.

Groundfires and woodfires are prohibited. Use only gas stoves or charcoal within a BBQ grill. Pack out all evidence of use. Smoking is prohibited on all Chisos Mountains trails.

Pack out all trash
Help preserve the park’s natural beauty by packing out all trash including cigarette butts and toilet paper.

No pets on trails or in the backcountry.
Pets may harm or be harmed by wildlife, and can attract predators.

Do not cut switchbacks on trails.
Although cross-country hiking is allowed, help prevent trail erosion by staying on marked trails.

Collecting any natural or historical feature or object is prohibited.
Leave park features intact for others to enjoy.

Contaminating natural water sources and their surroundings is prohibited.
Camp at least 100 yards from any water source.

Desert water sources and springs are fragile and vital for the plants and animals that depend on them for survival. Soaps, oils, skin lotions, and food residues from bathing and washing can seriously impact water quality. Minimize your impact to areas surrounding springs, seeps, and other temporal water sources.

Camp within designated sites.
When camping in a designated site prevent resource damage by camping within the area outlined by rocks, logs, or brushes.

Generator use is not permitted in backcountry campgrounds.
Natural quiet is a protected resource; help preserve a quiet wilderness experience.

In open zones, camp at least 1/2 mile and out of sight from any road and at least 100 yards from any trail, historical structure, archeological site, dry wash, or cliff edge.

Minimize your impact to the natural landscape.

Bury human waste at least 6 inches deep. Pack out toilet paper.
Human waste is unsanitary and unsanitary. Carry a digging trowel. Locate latrines 1/4 mile from any water source and well away from camp.

Motorized vehicles and bicycles are permitted only on designated public roads.
Off-road vehicle travel causes visual and environmental damage.

Do not feed wildlife.
Feeding wildlife is illegal; it often results in having to destroy the animal. Keep food, ice chests and coolgear in a hard-sided vehicle or food storage locker where provided. Remember that when people leave open food containers and trash laying around the site that they are inadvertently feeding animals, so keep trash contained in vehicles or bear boxes.

During the summer low elevation activities, such as desert hiking, are often best done in the morning, to avoid the heat of the day.

14 The Big Bend Paisano
Safety is Your Responsibility

Big Bend is unfamiliar country to most visitors yet it need not be dangerous. Whether hiking the highcountry, rafting the Rio Grande, observing wildlife, or simply driving the scenic roads of this wilderness park, let safety be your constant companion. Spend a moment reviewing these common safety concerns so that you may have an enjoyable visit.

Big Bend is wild country. In fact, many people visit precisely because it is so remote and rugged. But remember, as you enjoy the splendor of this great wilderness area, to make safety a priority. By giving forethought to your actions you can have a safe, exciting, and rewarding experience in Big Bend National Park.

Driving
Of the few accidental deaths in Big Bend that occur some years, most result from car accidents. Drive within the speed limit, 45 mph maximum in the park, and watch for javelinas, deer, and rabbits grazing along road shoulders, especially at night. Federal regulations require that all occupants of a vehicle wear seats belts while in a national park. Remember, too, that you share the road with bicyclists and pedestrians. Some park roads, such as the road into the Chisos Basin, are steep and winding and require extra caution. The Basin Road is not recommended for RV's over 24 feet or trailers over 20 feet. Finally, always select a designated driver before drinking alcoholic beverages.

Heat
Desert heat can kill you. Carry and drink at least one gallon per person per day. Wear a hat, long pants, long-sleeved shirt, and sun screen when hiking. Springs are unreliable and often dry up for much of the year. Travel in the early morning or late evening hours rather than during the heat of the day.

Mountain Lions
Big Bend is mountain lion country, especially the Chisos Mountains. While lion attacks are rare, two have occurred in the last twenty years. Should you encounter an aggressive mountain lion, hold your ground, wave your hands. Remember to report all bear or mountain lion sightings to a ranger.

Fire
Fire danger is always an important safety consideration in Big Bend. Wood or ground fires are not permitted in the park, and you must exercise caution in the use of gas stoves, charcoal grills, and cigarettes. During drought conditions some restrictions may apply to the use of these heat sources. Check with a ranger for the latest information about fire safety in the park. Smoking is prohibited on all trails in the Chisos Mountains.

Poisonous Animals
Venomous snakes, scorpions, spiders, and centipedes are all active during the warmer months. Wear shoes or boots at night instead of sandals. Inspect shoes and sleeping bags or bedding before use and always carry a flashlight at night. While snake bites are rare, they usually occur below the knee or elbow. Pay attention to where you walk and place your hands.

Desert Wildlife
Black bears, javelinas, skunks, coyotes, and raccoons frequent Big Bend's campgrounds. Although they sometimes appear tame, all of the animals in the park are wild, and could pose a threat to your health and safety if you attempt to approach or feed them. Never feed any of Big Bend's wildlife. To prevent these creatures from becoming habituated to people, store all food, coolers, cooking utensils, and toiletries in a hard-sided vehicle, preferably in the trunk of your car. Food storage lockers are available for hikers and campers in the Chisos Mountains. Dispose of garbage properly in the special animal-proof dumpsters and trash cans provided. Remember to report to a ranger for the latest information about fire safety in the park. Smoking is prohibited on all trails in the Chisos Mountains.

PROTECT YOUR BODY
Our sensitive skin burns easily; it needs shade, sunscreen, sunglasses, a wide-brimmed hat, and proper footwear. Dehydration is accelerated by exposed skin, so keep your clothing on. Wear long-sleeved, loose-fitting, light-colored clothes.

PROTECT YOUR PROPERTY
Be aware of road surfaces as you ride. Never over-ride the road conditions. Wear brightly colored clothing and never over-ride the road conditions.

PROTECT YOUR PROPERTY
Be aware of road surfaces as you ride. Never over-ride the road conditions. Wear brightly colored clothing and never over-ride the road conditions.

Suggestion for Motorcycle Riding
• Watch for vehicles staying over the center line.
• Stay alert for sudden stops or traffic slow-downs, especially around scenic pullouts or other congested areas.
• Wear brightly colored clothing or jackets to increase visibility to other motorists.
• Be aware of road surfaces as you ride. Never over-ride the road conditions.
• Watch for wildlife at the road edge.
• Secure your motorcycle and valuables when you are away from your bike.
• Ride with headlights on.

Survive the Sun
In all seasons, whether walking, backpacking, or day hiking, follow these tips to conserve your limited water resources:

REDUCE YOUR ACTIVITY
During the warmest days, generally from May through August, avoid hiking in the lower elevations during the heat of the day—generally from 10:00 am to 6:00 pm.

FIND SHADE
Shade in the desert means the difference between excessive heat gain from the radiant sun and shade comfort. In an emergency, a person resting in the shade will survive longer than someone exposed to the sun.

DRINK YOUR WATER
Don't try storing the drinking water you have. Whether strolling in the Basin, or hiking the South Rim Trail, you must drink your available water. Carry plenty of drinking water—at least 1 gallon per person per day. Balance your food and water intake. Eat a salty snack every time you take a drink of water.

REDUCE ALCOHOL & CAFFEINE INTAKE
Watchful is the best remedy for dizziness and dehydration. The diuretic effects of caffeine and alcohol can result in an accelerated loss of body water.

PROTECT YOUR BODY
Our sensitive skin burns easily; it needs shade, sunscreen, sunglasses, a wide-brimmed hat, and proper footwear. Dehydration is accelerated by exposed skin, so keep your clothing on. Wear long-sleeved, loose-fitting, light-colored clothes.

PROTECT YOUR PROPERTY
Be aware of road surfaces as you ride. Never over-ride the road conditions. Wear brightly colored clothing or jackets to increase visibility to other motorists.

Weather and Climate
Elevational differences in Big Bend mean that temperatures can be vastly different in different areas of the park. The lower areas along the Rio Grande are very hot in the summer months, while the Chisos Mountains are considerably cooler. Winter weather generally occurs between November and February, with temperatures dropping dramatically as cold fronts move through the area. Between June and October thunderstorms and flash floods may occur. Bring clothing for both warm and cool weather, as well as rain gear, when visiting Big Bend any time of the year.

Summer and Fall
Temperatures along the river tend to be the warmest in the park. Plan your activities with the weather in mind, visit the river in the morning, and always carry plenty of water. Higher elevations in the Chisos Mountains lead to lower temperatures. July brings thunderstorms, precipitation can liven up the landscape, but rains can reap havoc on the primitive roads throughout the park.

How Hot Is It?
Average temperatures and rainfall at Hector Ancheta elevation 2,700 feet.

Yearly Avg. 79/47 15.3°

Temperatures in the Chisos Basin vary 5-10 degrees below these readings, while daytime temperatures along the Rio Grande average 5-10 degrees warmer.

Share the Road
Every year park rangers investigate an increasing number of motorcycle accidents. Unfortunately, a significant number involve serious injuries.

Be alert
Motorists may dart out from road edges. Other drivers may pay too much attention to the scenery and cross over the center line into your travel lane or may suddenly stop their vehicles in the middle of the road to observe wildlife. These and other unforeseen conditions can lead to motorcycle accidents.

Suggestions for Motorcycle Riding
• Watch for vehicles staying over the center line.
• Stay alert for sudden stops or traffic slow-downs, especially around scenic pullouts or other congested areas.
• Wear brightly colored clothing or jackets to increase visibility to other motorists.
• Be aware of road surfaces as you ride. Never over-ride the road conditions.
• Watch for wildlife at the road edge.
• Secure your motorcycle and valuables when you are away from your bike.
• Ride with headlights on.

Weather in the Chisos Basin vary 5-10 degrees below these readings, while daytime temperatures along the Rio Grande average 5-10 degrees warmer.
The facilities and services listed here are located within the greater Big Bend area, and vary from 30 to 100 miles from Big Bend National Park. The communities of Terlingua/Study Butte (30 miles west) and Marathon (70 miles north) offer basic services, including gas stations, restaurants, lodging, and campgrounds. Alpine, 100 miles to the northwest of the park, offers the greatest number of services.

This listing of local services is a courtesy to our visitors and implies no endorsement by the National Park Service or Big Bend National Park.
