Piedras Blancas Light Station

Bureau of Land Management

Junior Explorer
In this activity booklet you will read about the history of Piedras Blancas Light Station and about the plants and animals that live on or near the light station.

Your name________________________

Date of visit_______________________

The Bureau of Land Management (BLM) is a federal government agency that takes care of more than 245 million acres of land. These lands are public land and belong to all Americans.
What is the difference between a lighthouse and a light station?

The lighthouse is the structure with the light on top.

The light station is all the buildings: house, sheds, fog signal, oil house, barn, and lighthouse.
Daymarks

Lighthouses have different shapes and colors so sailors can tell them apart. These differences are called “daymarks”.

What were the daymarks of the Piedras Blancas Lighthouse, as seen in this photo?

Answer: It was cone-shaped and painted white with black trim.
Light

At night sailors were guided by the flashing light of lighthouses. The flash was produced by a rotating lens. Every lighthouse had a different flash pattern called the light characteristic.

What was the light characteristic produced by the Piedras Blancas lens seen here?

Answer: There was a double flash: flash, flash, darkness; flash, flash, darkness; ...
Sound
When it was foggy a sound signal was used to guide the sailors.

1. In early years a whistle created a high pitched sound “EEEEEEE”

2. Later, foghorns created low pitched sound “BEEE-OHH”

What sound could be heard the farthest, a high or a low sound?

Answer: 2. A low sound.
