Death at Bryce Canyon

How many people die at Bryce? Fortunately, Bryce averages less than 1 fatality per year. In order of decreasing abundance, fatalities are caused by:

- Heart attacks
- Falling off cliffs
- Lightning
- Vehicle accidents

Unfortunately, hundreds of serious injuries have also needlessly occurred, some out of ignorance, but too many from ignoring park safety warnings.

Top 10 Causes of Bryce Injuries

#10 Unsafe Driving
- Speeding limits are 25, 35 and 45 mph.
- Failure to wear seat belts.
- Passing on a double yellow line.
- Auto vs. animal. Watch for Wildlife!
- Rear-ending. Stop in pullouts, never in road.
- Not reducing speed on wet or icy roads.

#9 Climbing / Sliding down cliffs
The rock at Bryce forms crumbly cliffs and steep gravelly slopes. Hand and toe holds support nothing heavier than chipmunks. Climbing the rocks and sliding on the slopes triggers lethal avalanches.

#8 Feeding Animals
Fed animals become aggressive. Even small animals can inflict bites requiring stitches and worse yet transmit disease. Watch wildlife from a distance and discourage animals that approach you.

#7 Ignoring Extreme Weather
At Bryce it is possible for the difference between the daily high and low to be as much as 50° F / 10° C! Lightning is a year-round danger – especially during summer monsoons! Seek the shelter of a building or your vehicle whenever the “flash-bang interval” (time between lightning and thunder) is less than 30 seconds.

#6 Dehydration
Drink 1 quart / liter every 1-2 hours. A well-hydrated body is better able to regulate body temperature and is more resistant to heat exhaustion. Sunburns also lead to dehydration. Wear a hat, sunscreen, and sunglasses to protect from the sun overhead and reflected UV light.

#5 Leaving the Trail
Stay on designated trails and away from cliff edges where footing can be tricky. Even on seemingly gentle slopes, it can be impossible to keep your footing. Bring the maps on page 6 and 7 to avoid getting lost.

#4 Over-exertion
Park elevations reach 9115 ft (2778 m) subjecting you to 70% of the oxygen you might be used to. Bryce’s trails start at the top which means all returns will be uphill. Turn back BEFORE you become tired. Know the top which means all returns will be uphill.

#3, #2, & #1 Bad Choice of Footwear

Wear hiking boots with good ankle support and “lug” traction. Hiking without hiking boots is like SCUBA diving without an air tank. Sport-sandals & “trainers,” are NOT safe hiking footwear.

Information and Services

Visitor Center
In summer, open daily 8:00 am - 8:00 pm. Information, museum, publications, an award-winning film, backcountry permits, first aid, and lost-and-found services are available here.

Emergencies
24-hour emergency response, call 911 or 435 676-2411. Garfield Hospital, 435 676-8811, and Clinic, 435 676-8842 are in Panguitch.

Accessibility
Restrooms: the Visitor Center, Sunset Point, Bryce Canyon Lodge, and General Store are fully accessible. Sunset Campground has two sites reserved for people with mobility impairments. The ¼-mile section of Rim Trail between Sunset and Sunrise points is paved and level. Inquire at the Visitor Center for information on accessible ranger-led programs, and to obtain an Access Guide and temporary handicapped parking permits.

Restrooms
Available year-round at the Visitor Center, North Campground and Sunset, Farview, and Rainbow Points. Restrooms are also available April - October at Bryce Canyon Lodge, General Store and Sunset Campground.

Phones
Available year-round at the Visitor Center. Phones are also available April - October at Bryce Canyon Lodge, General Store and Sunset Campground.

Pets
Pets are not recommended in the park. If you must bring your pet, be aware that it must be on a leash and under control at all times. Pets are not permitted in buildings, at park viewpoints, or on trails. They are allowed in campgrounds.

Horseback Riding
Wranglers lead 2-hour and 4-hour horse and mule rides April - October. For same-day reservations, inquire at Bryce Canyon Lodge or call 435 834-5500. For advance reservations, contact: Canyon Trail Rides, P.O. Box 128, Tropic, UT 84776; 435 679-8665. Information: www.canyonrides.com.

Post Office / ATM / Internet
Ruby’s Inn has a post office open Mon-Sat (Bryce, UT 84764), an ATM, and internet services. Personal mail addressed to park visitors will not be accepted at Bryce Canyon National Park.

Entrance Fees
Private Vehicle: $25 per vehicle, good for 7 days in Bryce Canyon National Park.

Individual: $12 per person (pedestrian, bicycle, motorcycle, and organized group), good for 7 days in Bryce Canyon National Park.

America the Beautiful Annual Pass: $80, good for one year from date of purchase in all federal fee areas.

Bryce Canyon Annual Pass: $30, good for one year from date of purchase at Bryce Canyon National Park.

Commercial Tours: Ask at the entrance station for rates.

America the Beautiful Senior Pass: $10 lifetime pass for U.S. residents 62 or older.

America the Beautiful Access Pass: Free lifetime pass for permanently disabled U.S. residents.

Camping
North Campground: Open all year, 107 campsites. Available first-come, first-served October 1 - May 14. Campsites may be reserved May 15 - Sept 30 by calling 877 444-6777 or www.recreation.gov. Reservations can be made up to 240 days in advance.

Sunset Campground: Open late spring to early fall, 101 campsites. Available first-come, first-served.

Fees: Camping is $10 a night per campsite (half price for America the Beautiful Senior and Access pass holders). There is an additional booking fee per advance reservation for North Campground.

Group Campsite: One site available by reservation only. Group size is limited to 7-30 people and 8 vehicles. Cost is $3 per person, with a minimum of $30 per night. Campsite may be reserved by calling 877 444-6777 or www.recreation.gov.

Dump Station: No hookups are in the park, but a fee-for-use dump station is available seasonally near North Campground.

Other Campgrounds: For camping reservations in nearby National Parks, call 877 444-6777 or visit www.recreation.gov. Public campgrounds are available on US Forest Service, BLM, and Utah State Park lands nearby. Private campgrounds with showers and hookups are available outside the park.

Recycling
Recycling bins are located at the entrance to Sunset & North Campgrounds, Sunset Point, the General Store and the Lodge. Now accepting aluminum cans and plastic #1-7.

Lodging
Bryce Canyon Lodge: Open April 1 - October 31, has cabins, motel rooms and suites, a restaurant, and gift shop. For lodging reservations, write to: Xanterra Parks and Resorts, Inc., 4001 East Ilifi Ave., Suite 600, Aurora, CO 80014, call 888 297-2757; or visit www.brycecanyonlodge.com.

Other Lodging: Available near the park entrance and in Tropic, Cannonville, Bryce Junction, and Panguitch.

Food Services
Bryce Canyon Lodge: Open April 1 - October 31. Dining room serves breakfast, lunch, and dinner. Dinner reservations are required; call 435 834-5361. The General Store, open April to October, has groceries, quick meals, and camper supplies.

Other Food Services: Restaurants are available near the park entrance and in Tropic, Bryce Junction, and Panguitch.

Showers & Laundry
Coin-operated shower and laundry facilities are available at the General Store, open April - October, and outside the park at some nearby establishments.

Bicycles
Bicycles are restricted to paved roadways in the park. The nearby Dixie National Forest has a paved 5-mile bicycle path through Red Canyon, and many miles of challenging and spectacular mountain bike trails. Grand Staircase-Escalante National Monument has countless miles of dirt roads suitable for mountain biking. Contact Dixie National Forest, P.O. Box 80, Panguitch, UT 84759, 435 676-9300, www.fs.fed.us/r4/dixie; or Garfield County Travel Council, P.O. Box 200, Panguitch, UT 84759, 800 444-6689; www.brycecanyoncountry.com.

Picnic Areas
Picnic areas are available year-round at Sunset Point, the General Store, Rainbow Point, and at the south end of North Campground April - October. Water faucets are available seasonally at all of the above locations except Rainbow Point. Fire grates are available only at the North Campground Picnic Area.

Religious Services
Available in the park during summer months and outside the park year-round. For more information, inquire at the Visitor Center or the Bryce Canyon Lodge.
How to Make the Most of Your Time

Less Than 4 Hours

Visitor Center
Stop at the Visitor Center for information, museum exhibits, and a 22-minute award-winning orientation film, shown daily 8:30 a.m. to closing, on the hour and half hour.

Auto Tour of the Overlooks
Ride the shuttle or drive your own vehicle to Bryce, Inspiration, Sunset, and Sunrise points first. If you still have more time, visit overlooks in the southern portion of the park.

Short Walk
Hike a short segment of the Rim Trail or select one of the other hikes from the “Easy to Moderate” group in the hiking table on page 7.

More Than 4 Hours

Visitor Center, Auto Tour, Short Walk and:

Day Hike
Bryce is best viewed from its trails. Select one of the combination loops from the “Moderate” or “Strenuous” groups in the hiking table on page 7.

Ranger Program
Attend a free Ranger Program to learn more about the natural and cultural history of this region. Check at the Visitor Center for the current program schedule.

Horse Ride
Take a horse ride into Bryce Canyon. Wranglers lead 2-hour and half-day rides daily. Inquire at Bryce Canyon Lodge.

Backcountry Hiking
Bryce Canyon has two trails designated for overnight hiking, the 9-mile Riggs Spring Loop, and the 23-mile Under-the-Rim Trail. Backcountry camping is by permit only on a first-come, first-served basis. Permits may be purchased at the visitor center from 8:00 a.m. until one hour before the visitor center closes.

There are two group sites available with a limit of 12 people per site. Campfires are not allowed in the backcountry. Use a campstove to cook meals. Backcountry water sources are unreliable and should be filtered. Each hiker should carry a minimum of one gallon of water for each day they are in the backcountry.

Auto Tour
Where is the best overlook?
There are 15 viewpoints along Bryce Canyon’s 18-mile scenic drive (one-way distance) and everybody determines his or her favorite for a multitude of reasons. Furthermore, for every 15 minutes you extend your visit, you can see another overlook. If you stop at all the viewpoints, it could take as little as 3-4 hours.

Our most famous views are found in Bryce Amphitheater, including Sunrise, Sunset, Inspiration and Bryce Points. The southern overlooks feature long-distance, panoramic views across the Grand Staircase-Escalante National Monument.

Since all the viewpoints are on the left side of the road as you drive south towards Rainbow Point, we recommend stopping at the viewpoints as you drive north on your return trip. This way, each stop will be an easy and safe right turn.

Astronomy Programs
Join dark rangers, volunteers, and NASA Solar System Ambassador Patrick Wiggins, to learn about the heavens, and view Bryce Canyon’s night skies through telescopes (weather permitting). Offered at least twice a week. Ask at the visitor center or look on page 10 for program schedules.

Duration: 2 hours

Kids Programs / Family Programs
All of Bryce Canyon’s ranger programs are family friendly, but these in particular are fun for kids and parents alike. Rangers present a wide range of programs appealing to a variety of interests. In person reservations required. Sign up at the visitor center.

Duration: 1 hour

Full Moon Hike
Hike among moonlit hoodoos. Group size is limited to 30 people and in-person reservations can only be made at the visitor center the morning of the intended hike. (Offered two nights each month during the full moon. Check page 10 for schedule.)

Length: 1.5 to 2 miles

Duration: 2 to 2.5 hours

Kids Programs / Family Programs
All of Bryce Canyon’s ranger programs are family friendly, but these in particular are fun for kids and parents alike. Rangers present a wide range of programs appealing to a variety of interests. In person reservations required. Sign up at the visitor center.

Duration: 1 hour

Full Moon Hike
Hike among moonlit hoodoos. Group size is limited to 30 people and in-person reservations can only be made at the visitor center the morning of the intended hike. (Offered two nights each month during the full moon. Check page 10 for schedule.)

Length: 1.5 to 2 miles

Duration: 2 to 2.5 hours

Ranger-led Activities
We invite you to join rangers to learn more about Bryce Canyon National Park. Rangers discuss geology, plants, animals, and human history on the various walks and talks offered each day.

Geology Talk
Hoodoos, ancient lakes and something called frost wedging? Geologists have spent years studying the unique story of Bryce Canyon. Spend a half hour with a ranger as we discuss the current scientific explanation behind Bryce Canyon’s unique geologic history.

Duration: 30 minutes

Sunset Walk
Great views, fascinating plant and wildlife stories, a touch of geology, a smattering of cultural history – what more could you want? Join a park ranger for an overview of Bryce Canyon as you stroll along the rim of the Bryce Amphitheater.

Length: 1 mile, Duration: 1.5 hours

Campfire / Auditorium Program
Bryce Canyon’s diversity comes to life during slide programs at the campground outdoor theaters, or the auditoriums at the visitor center or Bryce Canyon Lodge. Auditoriums are wheelchair accessible, as is Sunset Campground campfire circle. North Campground campfire circle is not.

Duration: 1 hour
Help Stop Animal Cruelty

Feeding wild animals is a classic example of how good intentions can unwittingly cause serious harm. In fact, feeding wildlife is actually a form of animal cruelty!

Fed animals frequent roads and parking lots where they are much more likely to get run over by cars. Furthermore, wild animals have very strict natural diets and therefore very specific types of digestive bacteria. Human food causes the wrong type of digestive bacteria to become dominant. Soon, fed animals can no longer digest their natural foods and ultimately will starve to death with full stomachs. What could be more cruel?

Fed animals will even teach their offspring to beg for food. These young animals may never learn the necessary skills to find natural foods and grow up totally dependent on humans for survival. The act of feeding wildlife can also be dangerous to people. Rodents are notorious for transmitting diseases. You put yourself in jeopardy every time you get within flea-jumping distance 6-9 feet (2-3 m) of a squirrel or prairie dog. Worse yet, feeding can cause normally docile animals, like deer, to become aggressive. In one sad instance at Yosemite National Park, a young child was gored and killed by a “spike” deer buck when he refused to relinquish his sandwich to the animal.

Unfortunately, once animals become habituated to humans, their behavior often leads to management actions that may result in their removal from the park.

Giving in just once to the big, brown, pleading eyes of a cute animal can have major consequences. Be responsible. Learn to be a friend of wildlife by not trying to befriend animals with food.

Please spread the word. True animal lovers don’t feed wild animals. Help protect your national parks.

Threatened: Utah Prairie Dogs

A year-round inhabitant of Bryce Canyon’s high plateau meadows is the Utah Prairie Dog, Cynomys parvidens. Actually, prairie dogs are not in the canine family; prairie dogs are rodents. The Utah Prairie Dog’s range, limited to the southwestern quarter of Utah, is the most restricted of any prairie dog in North America. While the Utah Prairie Dog occurs on numerous federal, state, and private lands, Bryce Canyon is the only National Park Service unit in which it’s found.

The Utah Prairie Dog is federally listed and protected as a threatened species, having been eradicated from much of its limited range in southwest Utah through poisoning, disease, habitat loss, and natural cycles such as drought. Utah Prairie Dogs were eradicated from Bryce Canyon in the 1950’s. The park began a re-establishment program with the U.S. Fish and Wildlife Service and Utah Division of Wildlife Resources in 1974 with Utah Prairie Dog transplants to meadows within the park. This program continued through 1988. Throughout its range, there are fewer than 5,000 Utah Prairie Dogs remaining. Within the park, Utah Prairie Dog numbers are approximately 200 individuals in roughly 10 colonies that are monitored by the National Park Service. These colonies also include adjacent US Forest colonies.

Utah Prairie Dog is an example of the complex web of life that exists in nature. Prairie dogs dig deep burrows. This burrowing provides not only refuge from predators and cold winter temperatures, it also aerates the soil and allows moisture to penetrate deep to plant roots which helps the vegetation in the meadows flourish. Utah Prairie Dogs utilize the burrows for protection from numerous predators—which include badgers, coyotes, foxes, bobcats, birds of prey such as hawks and eagles, and the occasional snake. Some predators, after dispatching a Utah Prairie Dog, may then utilize the burrow for shelter or even denning purposes.

Utah Prairie Dogs prefer a landscape relatively clear of trees, shrubs, and tall grasses so they can keep an eye out for danger. The natural process of fire enhances the viability of prairie dogs by eliminating the trees, shrubs and tall grasses that may be encroaching into meadow habitat and therefore decreasing their ability to detect predators. Fire also returns nutrients to the soil, which in turn enhances the edible crop of native grasses and forbs for the Utah Prairie Dog.

In short, Utah prairie dogs fill a crucial role in the ecosystem at Bryce Canyon National Park, as well as throughout the remainder of their native range, by serving as prey, creating potential habitat for other animals, and maintaining healthy meadow ecosystems. Enjoy viewing these social animals from a distance!
How Was Bryce Canyon Created?

The striking scenery that makes Bryce Canyon unique, has been created by the forces of nature sculpting the brilliantly-colored Claron Formation into a series of beautiful and unusual erosional features.

Bryce Canyon's beginnings take us back to the end of the earth's tumultuous Cretaceous Period, 65 million years ago. It was a time that brought cataclysmic changes worldwide, including the extinction of the dinosaurs.

Deposition
The creation of this unique landscape can be traced back to a network of braided rivers and streams which transported a variety of sediments into a large freshwater lake that once covered southwestern Utah. Colorful minerals such as iron (yellow and red) and manganese (pink and violet) mixed with dissolved calcium carbonate to create this unusually colorful limestone. Over time, the water disappeared, leaving behind the multicolored Claron Formation from which Bryce Canyon's unusual scenery is carved.

Uplift & Faulting
About 10-15 million years ago, a period of uplift began in the large region of the southwest known as the Colorado Plateau. Such tremendous stress on the earth's crust led to a period of faulting, stretching and fracturing, thereby creating a series of smaller plateaus.

The highest of these plateaus, the Table Cliff, is visible to the east of Bryce. Bryce Canyon has been carved from the eastern rim of the Paunsaugunt Plateau. The Paunsaugunt Fault, which separates these two plateaus, initiated the sculpting process by breaking the surrounding rock with vertical mini-fractures called joints. A series of perpendicular joints were also created by another earthquake zone called the Ruby's Inn Over-thrust Fault. Earthquakes along these two faults left a checkerboard pattern of fractures, priming Bryce Canyon for the forces of weathering and erosion.

Weathering & Erosion
Although Bryce Canyon receives a meager 18 inches of precipitation annually, it's amazing what this little bit of water can do under the right circumstances!

Sub-freezing nighttime temperatures and relatively warm days result in over 200 freeze-thaw cycles annually. During the afternoon, snow and ice will melt, and water seeps into the joints of the Claron Formation. Once the sun sets, temperatures plummet and the water re-freezes, expanding up to 9% as it becomes ice. Exerting tremendous force on the adjacent rock, this process, known as frost wedging, shatters and prises the weak rock apart.

At the same time, rain water, which is naturally acidic, is slowly dissolving away the limestone, rounding off the edges of these fractured rocks, and washing away the debris. The plateau continues to erode westward in a process called headward erosion.

Small rivulets of water periodically run down the sloping eastern escarpment of the plateau, forming gullies (A). As gullies are cut deeper, narrow walls of rock known as fins begin to emerge (B). Fins eventually develop holes known as windows (C). Windows grow larger until their roofs collapse, creating hoodoos (D). As old hoodoos collapse, new ones are being born.

The conditions and processes at work here are not unique, but the distinctive way in which all of the elements operate together results in the fantastic scenery that makes Bryce Canyon worldly unique.
FREE* SHUTTLE!

Bryce Amphitheater Route

The Bryce Canyon Shuttle is voluntary. Riding the shuttle reduces traffic, conserves fuel, saves time, money, and the planet! Shuttle buses are fully accessible. Pets are not allowed.

Season of Operation: Late May - September

Hours of Operation:
9:00 am - 6:00 pm Mountain Daylight Time

Bus Interval:
12 - 15 min

Last Bus ENTERS Park:
5:40 pm

Last Bus EXITS Park:
6:20 pm

* Park entrance fee required to ride the shuttle

Rainbow Point Tour
Additional Fee Required

This lesser-visited section of Bryce Canyon features spectacular cliffs and long-distance views across the Grand Staircase-Escalante National Monument.

Season of Operation: Late May - September

Tour Includes:
3½-hour narrated tour to Rainbow Point; stops at seven viewpoints

Departure Times:
10:00 am & 2:00 pm

Backpackers Welcome!

Tickets & Reservations:
Call 435-834-5290

Bryce Canyon Scenic Tours & Shuttle

For additional tours / taxi service in the Bryce Canyon area call 435-834-5200 or 800-432-5383.
Hiking Reminders...  
- Wear hiking boots with good traction.
- Carry plenty of water; drink a gallon a day.
- Park elevations reach over 9115 feet (2778 m). Even mild exertion may leave you feeling light-headed and nauseated. Know and respect your own physical limitations.
- Trails with this symbol 🐴 are used by horses April–October. Horses have right-of-way. Stand on uphill side of trail to let horses pass. Give them warning of your presence. Talk, don’t yell.

Stay on maintained trail. Do not take short cuts.
- Do not feed the wildlife.
- Do not throw anything, anywhere, at any time.
- Be respectful of others; keep noise levels down—no yelling.
- Pack out all trash including tissue paper and cigarette butts.
- Pets are not permitted on the trails.
- Uphill hikers have the right of way.
- Remember, you are entering a wild setting. Ultimately, you are responsible for your safety and the safety of those around you. Take what you bring; leave what you find.
Lightning Safety

Take Lightning Seriously

Summer storms at Bryce Canyon bring lightning, a powerful force which can and does kill. Take a look along the canyon’s edge, and you’ll soon spot one of the countless trees that have been struck. Don’t let that be you!

Here at Bryce Canyon, lightning has claimed the lives of three visitors in the past 18 years. Six other visitors have been seriously injured by lightning strikes.

In the state of Utah, Bryce Canyon is the second most common place for lightning fatalities and injuries, behind the Uinta Mountains. Considering that the park is much smaller in area, Bryce Canyon is the highest lightning hazard density in the state!

Where is it Safe?
The safest place to be is in an enclosed building with walls, roof, and floor (such as the visitor center). The next best place is in an enclosed vehicle.

If you can’t get to a safe location, avoid the most dangerous places and activities, including higher elevations, wide-open areas, tall isolated objects, water-related activities and open vehicles. Do not go under trees to keep dry during thunderstorms!

How do I Plan for Safety?

In this area, thunderstorms usually occur in the afternoon during July and August. If possible, plan your outdoor activities for the early part of the day. Learn and practice the 30/30 Rule (see below).

When is it Time to Seek Shelter?

Begin counting as soon as you see a flash of lightning. If you CANNOT count to 30 (i.e., 30 seconds) between the flash and hearing its thunder, it is unsafe to be outdoors. You should seek shelter immediately.

When is it Safe to Go Back Outside?

It is not safe to be outdoors until at least 30 minutes after you hear the last thunderclap or see the last flash of lightning.

Don’t be fooled by the bright sunshine overhead! Lightning can strike away from the dark clouds. Be alert to new storms developing in the area.

Remember, your safety is YOUR responsibility. Learn the signs of an impending lightning storm. Be willing to alter your visit to make the safe choice. Practice the 30/30 Rule.

Fire On The Plateau

Lightning-sparked fires have been an essential part of park ecosystems for thousands of years. Where there’s smoke there’s fire and that may not be a bad thing. In fact, fires were once a common occurrence throughout the Paunsaugunt Plateau. Before human settlement increased in the late 1800s, lightning frequently started fires which rejuvenated plant growth, recycled soil nutrients, and increased wildlife habitat diversity. Grazing, fire suppression and other land management practices have altered this natural cycle and created an unhealthy forest with dangerous accumulations of downed trees and dense underbrush in some areas of the park.

Bringing Fire Back

A primary mission of the National Park Service is preservation of dynamic natural processes. Fire has been an essential and natural part of Bryce Canyon’s ecosystems for thousands of years. Research in fire ecology indicates many plants and animals have evolved with and actually benefit from the effects of fire. Without fire, forests would not be able to support the diverse habitats required by many plant, bird and mammal species. The reintroduction of fire after a century of absence, will help restore these fire adapted ecosystems within this Park.

Forest Health Care

Much like a doctor would prescribe a specific medical treatment for a sick patient, fire managers prescribe a planned course of action to remedy unhealthy forest conditions. Prescribed fires are intentionally ignited under predetermined environmental conditions to meet a variety of park management objectives. “Wildland fire use” is the term used to describe natural lightning ignited fires that are allowed to burn under specific conditions within predetermined areas. When acceptable temperature, humidity, wind and other conditions occur, fire managers may use prescribed fires or allow lightning-caused fires to burn for resource benefit.

Fire-Adapted Ecosystems

The ponderosa pine, with thick fire resistant bark, is an excellent example of a fire-adapted species. Some of the larger trees show evidence of scars from past fire activity and demonstrate that fire rarely destroys everything in its path. More typically, fire creates an important mosaic of burned and unburned vegetation. Regularly occurring lower-intensity fire naturally thins the forest, creates meadows, recycles nutrients and releases seeds for new plant growth; all critical factors in maintaining forest health and natural cycles of growth and decomposition.

In some areas of the park, especially near developed zones, it may not be feasible to reintroduce fire. The area where park lands meet developed zones is referred to as the “wildland-urban interface.” In partnership with other federal, state and local agencies, as well as with responsible private landowners, park managers are implementing strategies to reduce the risk of wildfire in these areas. Landowners can reduce their risks considerably through clearing a defensible space around their buildings.

Using chain saws and hand tools, park crews remove dead and downed woody materials and thin closely spaced live trees to create fuel breaks. Some dead standing trees and downed material remains in place for use as wildlife habitat. Some of the wood from these thinning projects is hauled away and may be burned in another location or utilized for various purposes. The remaining material is piled to dry and burned on site when conditions permit.

Fire Suppression and Prevention

Public and firefighter safety are always the highest priority in all fire management activities. Fires that threaten life and property will continue to be suppressed. Fire suppression crews from Bryce Canyon National Park and partnering agencies provide the first line of defense from unwanted wildfire. Fire prevention is every citizen’s responsibility, so please use caution with all campfires and smoking materials during your visit to the park.

Healthier Forests on the Horizon

Park staff also work in conjunction with state air quality officials to ensure that smoke impacts are kept to a minimum, however you may encounter slight inconveniences during your visit. Smoke from prescribed fires may temporarily obscure a vista, but also signals that healthier forests are on the horizon.

**A Weed By Any Other Name...**

As you drive along Bryce Canyon’s scenic roadways or hike any of the trails, you may see Bryce Canyon’s revegetation crew and volunteers hard at work. They’re identifying and documenting information such as species, location, and size of exotic vegetation infestations; manually pulling non-native plants; conducting erosion control measures on steep slopes; and revegetating disturbed soils.

Bryce Canyon has currently documented 73 exotic plant species that have been in the park at one time. How did these “weeds” become established here? Wildlife may have played a small role. Animals with large ranges such as mule deer, black bears, and mountain lions can bring in exotic plant seeds embedded in their fur. Birds may eat berries and seeds that, when passed through their digestive systems and excreted, can sprout exotics. Rodents may cache seeds for winter use in various locations, thus spreading the seed base. Probably more significant, though, is the role that humans play in this cycle. For instance, the revegetation crew is working to ensure that schoolyards, church parking lots, and revegetating disturbed soils.

Once identified, exotic species are eradicated using a number of techniques, including manual (hand-pulling and chopping), mechanical (chainsaw), fire, and—as a last resort—chemical means. Sometimes a combination of techniques is utilized such as in the case of tamarisk, Tamarix ramosissima. Small tamarisk plants can be pulled by hand if care is taken to remove the entire taproot. However, larger trees must be cut with a chainsaw, and the stumps treated with chemical herbicides to prevent resprouting. Tamarisk favors fragile riparian areas and outcompetes native species due to its rapid growth rate, deep taproots, and salt secretions that create a hostile environment for native plants.

Along the park’s roadways, our crew is planting and reseeding soils with native plants. To prevent roadside weeds from becoming established, the crew will reseed with native seeds and transplant native shrubs, trees, and grasses. Seeds gathered from grasses and forbs native to the Paunsaugunt Plateau were sent to a nursery in Meeker, Colorado, in order to produce the number of seeds needed for the area of coverage.

Erosion control has also been undertaken along the road. You may have seen the “waddles” (straw-filled, net-covered cylinders that are certified weed free) staked into the bare hillsides. Waddles prevent topsoil from sloughing downhill or being washed down drainage ditches until roots from the reseeding efforts take hold and naturally bind the soil.

**What Animals Live Here?**

For a small park, Bryce Canyon has several types of habitat which support a diversity of wildlife. While you may not see lots of any one species, you will see a variety of animals if you know when and where to look.

- **Main habitat**: Sagebrush, Meadow, Forest, Canyon
- **All habitats**
  - Season: W=Fall/Winter, S=Spring/Summer, A=all seasons
  - Best time to look: d=day, t=twilight, b=both day and twilight
  - Difficulty in finding: e=easy, h=hard, u=unlikely

**Do NOT approach or attempt to feed any wild animal!**

- Pronghorn, once roaming the plains of North America in numbers second only to Bison, can easily be found at Bryce Canyon National Park. They are the fastest land mammal on the continent and only the second fastest mammalian runner in the world, reaching speeds of up to 60 mph!

- They can be seen in the meadow areas inside and around the park. However, because these animals are so fast, they are more safely viewed from inside your car.

When driving, stay alert for park employees working along the roadsides. Give them a brake! Spotted knapweed is one of 73 exotic plant species in the park.
Some people are afraid of the dark. Interestingly, Bryce Canyon’s park rangers are scared of the light! Perhaps you’d be fearful, too, if it was your job to protect some of the best dark left in the world.

Preserving darkness isn’t easy. Education is our best tool, as Bryce Canyon’s biggest threats to darkness come from outside its boundaries. Protecting the dark requires using light wisely. Light that shines down is often necessary; however, light that escapes sideways or upward only pollutes the night and dims the stars. Many municipalities have found that by switching to shielded light fixtures, they can more effectively illuminate neighborhoods with less electricity. This not only reduces light pollution, but their residents’ tax burden, as well.

Being far from civilization, Bryce’s night skies are not only dark, but our high desert location makes our thin air very easy to see through. Consequently, this is a phenomenal place for stargazing. With a limiting magnitude rating of 7.4, Bryce’s sky is as dark as world class astronomical research locations. By comparison, a moonless night in a small town setting rates at a 6.0 magnitude, where 2500 individual stars can be seen twinkling in the void. But here at Bryce, 7500 are visible to the unaided eye!

As darkness falls, the first star may actually be the planet Venus, shining so brightly at Bryce it will cast your shadow. Venus is soon followed by Vega, Arcturus, and other bright stars. When the transition from light to dark is complete, look for the combined light of billions of stars all so distant they appear as one long cloud stretching across the sky. Behold, the Milky Way! This stellar strip of light is only a portion of our galaxy, which contains 200 billion stars.

In most places it’s never dark enough to see, but at Bryce, only hours after sunset, your eyes will be able to see 2.2 million light years to the Andromeda Galaxy. Near the hind legs of the constellation Pegasus you will discover this fuzzy cloud that astronomers know as M31. Andromeda is simultaneously the largest and most distant object you will ever see with your unaided eye, measuring 110,000 light years in diameter!

At Bryce, the Andromeda Galaxy is just the beginning. From the vantage point of this sanctuary of darkness, a universe of stellar wonders await. Join park rangers for one of our popular astronomy programs where you can marvel at all the heavens have to offer. Before being veiled by the light pollution of the modern world, these deep sky objects were once visible everywhere. Now over much of the planet they are hard to detect. It is estimated that less than half of the residents of the northern hemisphere can even see any of the Milky Way!

It is easy to feel insignificant underneath such vastness, yet ironically, it is within an individual’s power to help preserve such a view. Close your blinds at night and replace porch lights with motion sensor security lights. Become involved in local efforts to establish good lighting. Who knows? Perhaps your home town has the potential for Bryce Canyon quality stargazing. In most places, all it takes to restore the heavens is a shared passion for the dark and the unified responsible management of light.

Established in 1961, Bryce Canyon Natural History Association is a non-profit organization dedicated to assisting Bryce Canyon National Park and Dixie National Forest in furthering their scientific, educational, historical, and interpretive activities. This is accomplished, in part, by making educational publications and materials available for sale and/or free distribution, and supporting existing interpretive activities, like the Junior Ranger Program.

Every purchase from a Bryce Canyon Natural History Association bookstore helps support our mission.

As a Natural History Association member, you can help us:

- Publish nearly a half million pieces of free literature for park visitors each year.
- Support resource management research activities.
- Support educational outreach programs to schools in southern Utah and beyond.
- Continue National Park Service research projects that document the natural and human history of Bryce Canyon National Park.
- Support the Junior Ranger Program.
- Help publish interpretive books, maps, posters, and audio-visual products that educate visitors about Bryce Canyon National Park and Dixie National Forest.
- Support the Bryce Canyon Interpretation Division of the National Park Service.
- Provide scholarships to deserving students and universities.

A membership with Bryce Canyon Natural History Association includes these benefits:

- 15% discount on all books, maps, posters, and other products sold by Bryce Canyon Natural History Association in our stores, by phone (888 362-2642), or online (www.brycecanyon.org).
- 10% discount at the Bryce Canyon Lodge gift shop operated by Xanterra Parks and Resorts (you must present your membership card to receive discount).
- Discounts to hundreds of other stores operated by more than 60 nonprofit cooperating associations at numerous national parks and other public lands throughout the United States (you must present your membership card to receive discount).
- Bryce Canyon Natural History Association members receive a discount on most High Plateaus Institute courses. These courses offer in-depth outdoor education to visitors. Call or check our website for listings.

Become a personal partner with Bryce Canyon National Park to help preserve and protect the wonder and resources for this and future generations.

Thank You to Our Donors & Partners

Bryce Canyon National Park wants to thank its generous donors and park partners for helping to improve programs and services here at the park.

The Bryce Canyon Natural History Association provides the park with booklets and badges for the Junior Ranger program, printing costs for this Hoodoo newspaper and other publications, and housing for Volunteers and interns. The Association also funds a full time Education/Outreach Specialist for the park.

The donation box in the lobby of the visitor center has funded interpretive equipment that directly benefits the visiting public. A “state of the art” projector for the visitor center auditorium will be purchased in 2007.

Two Geoscientist-in-Parks interns have been granted by the Geologic Society of America. These interns will assist with research, present public geology programs throughout the summer, and provide training for park staff on the geology of the Colorado Plateau. Our Natural History Association is also helping to fund these two positions.

The Bryce Canyon Lodge and Ruby’s Inn Resort have implemented a Dollar Check-Off Program. Guests at their hotels have the option of donating a dollar per night of their visit. These programs have funded seasonal employees for interpretation and the trail crew.

A hearty “thanks” to our generous donors and park partners. We couldn’t do it without you!

V.I.P.s (Volunteer-In-Parks)

Last year, more than 280 volunteers donated over 28,000 hours to Bryce Canyon National Park! If you’ve got time and talents to share, why not become a Volunteer-In-Park (V.I.P.)?

For more information, log on to: www.nps.gov/brc (click on volunteer) or www.volunteer.gov.

The Waterpocket Fold, a giant wrinkle in Earth’s crust, features a jumble of colorful cliffs, massive domes, soaring spires, twisting canyons, and graceful arches. Ancient rock art and historic orchards tell of the park’s cultural history. Orchards are open June - October for “self-serve picking” of cherries, pears, apricots, peaches, and apples. Visitor Center: 435-425-3791 www.nps.gov/care

Capitol Reef National Park
121 miles northeast via Utah 12 & 24

Cedar Breaks National Monument
83 miles west via Utah 12, US 89 & Utah 14

At 10,350 feet (3155 m), Cedar Breaks is the highest Park Service unit and features a spectacular amphitheater of walls, fins, spires, and columns eroded out of colorful Claron limestone. Forests of pine, spruce, fir, and aspen are separated by alpine meadows ablaze with brilliant summer wildflowers. Temperatures are usually cool. Headquarters: 435-386-9451 www.nps.gov/cebr

Grand Staircase-Escalante Nat’l Monument
South and east via Utah 12 & US 89

Administered by the Bureau of Land Management, this 1.9 million acre area features diverse and ruggedly beautiful landscapes. Utah 12 and US 89 skirt the fringes of the monument and offer numerous scenic pull-outs. All of the roads in the monument’s interior are unpaved, and many require 4-wheel drive. Escalante Visitor Center: 435-826-5499 Cannonville Visitor Center: 435-679-8981 Kanab Headquarters: 435-644-4600 www.ut.blm.gov/monument

Red Canyon / National Scenic Byway 12
124-mile route between US 89 & Utah 24

National Scenic Byway 12 stretches 124 miles from Red Canyon to Capitol Reef National Park and provides breathtaking views across the Grand Staircase and into the Escalante Canyons. The Federal Highway Administration designated this route an “All-American Road,” making it a “destination unto itself.” Ask for a Byway 12 Route Guide at any visitor center along the way.
