Icon of the Wild Desert

The coyote is the icon of wilderness in most desert parks. When we see a coyote eating from peoples hands, roaming picnic areas and waiting along the roadside for handouts, we lose a lot of that wild experience we originally came to the park to enjoy. Coyotes are both scavengers and predators and—like human beings—would rather take the easy way out. They will eat at any opportunity. When visitors offer food, coyotes will gladly take it. Death Valley National Park is their home; they belong here, but feeding wild animals does not. In fact, it is illegal.

The law is intended to protect park resources and people. Feeding wild animals habituates them to humans and our food. Coyotes lose their natural fear of humans and can become aggressive when food is not forthcoming or if they feel cornered or threatened. This poses a hazard to the visitor. Coyotes can inflict serious bite wounds and have the potential to carry rabies. Small children and pets could become targets of hungry or angry coyotes. In addition, when a visitor stops in the road to feed or photograph a coyote, both become traffic hazards.

By feeding one coyote you are possibly injuring many. Once a female coyote is habituated to human food she will teach her pups the same habits. These pups will not learn the skills necessary to forage naturally, becoming dependent upon humans for their survival. If the coyotes are feeding on human food, the pups and parents are not getting the nutrients they need. This propagates a very unhealthy cycle.

An oft posed question to rangers is, “Why don’t you just trap and relocate the animal?” When a coyote is relocated, it is being placed in the territory of another coyote. One of the them will end up in a marginal habitat and could starve. As long as visitors are feeding coyotes, the animal’s “preferred” habitat is where the visitors are. If relocated, the coyote will attempt to return and may starve or be hit by an automobile during the journey. For these reasons the National Park Service does not relocate animals at Death Valley.

However, the problem still exists and more drastic measures are being taken. Current policy in Death Valley National Park is to harass the habituated animal to deter the coyote from returning to the site and break it of its begging behavior. Only a few well-trained National Park Service employees are allowed to conduct these activities. Under no circumstances should you, the visitor, harass wildlife. Although unpleasant, harassment is better than the final alternative, euthanasia. In order to protect the visitors and end the cycle of habituated animals, many parks have had to euthanize aggressive animals. It is not an activity that any park employee wants to undertake.

A begging coyote’s behavior is not the animals’ fault. It is doing what comes easiest, but that is not always the most healthful. Even with the Park Service taking the above measures, YOU are the most important link in solving this problem. Please help us keep our wildlife wild and alive by not feeding any of the wild animals in Death Valley.
**PARK INFORMATION**

**Regulations Protect Your Park**

Death Valley National Park and its resources belong to everyone, we all must share the responsibility of protecting this land. Please remember and obey the following regulations during your stay:

- **Collecting or disturbing** any animal, plant, rock or any other natural, historical or archeological feature is prohibited.
- **All vehicles must remain on established roads.** This includes motorcycles, bicycles, and four-wheel drive vehicles. All motorized vehicles and their drivers must be properly licensed. Vehicles with off-road registration “green stickers” may not be operated in the park.
- **Do not feed or disturb wildlife,** including coyotes, roadrunners & ravens. When wild animals are fed by humans they tend to depend upon this “unnatural food source” rather than forage for their natural diet.
- **Hunting and use of firearms** in the park is illegal. Firearms may be transported through the park only if they are unloaded and cased.
- **Keep pets confined or leashed.** Pets are allowed only in developed areas and along paved or dirt roads.
- **Camping is limited to developed campgrounds** and some backcountry areas. For details on backcountry camping and to obtain a free permit, stop at the Furnace Creek Visitor Center or any ranger station.
- **Campfires are allowed in firepits provided in developed campgrounds.** They are prohibited elsewhere in the park. Gathering wood is unlawful.
- **Please do not litter.**

**National Park Pass**

A new annual pass for the National Parks was introduced in 2000. The National Park Pass allows admission to any National Park unit that charges an entrance fee. The cost of the pass is $50. For persons who visit several National Park areas within twelve months the pass is a good bargain. But more importantly, you will become a partner with thousands of others who support the National Parks because 80% of the cost of the National Park Pass goes directly into supporting park programs such as: repairing outdated and overused campgrounds, restoring historic structures in parks or conducting crucial research to track and protect endangered species such as the Devil’s Hole pupfish. You can purchase the National Park Pass at any national park where fees are collected or by visiting the website: [www.nationalparks.org](http://www.nationalparks.org)

**Camping Reservations**

Reservations may be made for the Furnace Creek Campground and group sites for October 15 through April 15. Beginning on the fifth of each month, reservations can be made five months in advance.

For reservations at Furnace Creek Campground and group sites call: 1-800-365-2267 or visit the website at: [reservations.nps.gov](http://reservations.nps.gov)

**Campground Rules:**

- **Group size of no larger than 8 people and 2 vehicles is allowed per campsite.** Only one RV allowed per site.
- Larger groups wanting to camp together can reserve the group sites at Furnace Creek Campground.
- **Generator hours** are from 7 AM to 9 PM, unless otherwise posted. These hours are chosen to accommodate the needs of the wide variety of people who use Death Valley’s campgrounds. Generators are not allowed at Texas Springs Campground.
- **Pets must be kept on a leash (no longer than 6 feet) at all times.** Keeping your pet leashed protects other campers and wildlife as well as your pet. Pet owners are responsible for cleaning up after their pets.

Desert Survival

Staying Safe & Sound

Desert Wildlife: Masters of Survival

The extremes of summer in Death Valley pose the ultimate test of survival for wildlife. Animals must have special adaptations of bodies and habits to survive the severe climate.

Kangaroo rats can live their entire lives without drinking a drop of liquid, a very handy ability when living in a place famous for its aridity. All of the water they need to survive can be metabolized within their bodies from the dry seeds they eat. They also conserve moisture; their kidneys can concentrate urine to five times that of humans.

Kangaroo rats avoid the intense heat of the day in underground burrows that are both cooler and higher in humidity than outside. Water vapor in the humid air is reclaimed by special membranes in their nasal passages, and is also absorbed by the food stored within the den. They may even plug the burrow’s entrance with dirt to keep out heat and intruders.

Sidewinders are the type of unwelcome guests the kangaroo rat is trying to keep out. These small rattlesnakes also spend the hot days in underground dens. Rather than digging their own burrows, they simply move into one previously occupied by the unlucky rodent eaten for dinner.

Although best known for their odd looping motion of travel, sidewinders are well adapted to the extremes of Death Valley. Like kangaroo rats, sidewinders do not need to drink water. All the moisture they need comes from the juicy animals they eat.

Endothermic (warm-blooded) animals such as kangaroo rats and humans use food as fuel to produce body heat internally, but ectothermic (cold-blooded) reptiles like sidewinders must absorb heat from their environment. Deserts have a lot of heat, but little food, so reptiles are excellent desert dwellers.

The tiny pupfish of Salt Creek are also ectothermic, yet they cannot escape the high temperatures of solar-heated pools. Pupfish are among the most heat tolerant of all fishes. Some species even live in warm springs. They have been known to survive in water temperatures of 112°F.

Another obstacle these fish face is high salinity. Pupfish can survive in water three times saltier than sea water. Excess salts are excreted through their kidneys and gills.

During your visit, keep in mind that only the ability to carry water and to create artificial shelter allows you to be here in relative comfort. You are not as physically adapted to survive in Death Valley’s heat as its wildlife residents.

Survive the Drive

- The main cause of death in Death Valley is single-car accidents.
- Follow the speed limit to help negotiate the narrow roads, sharp curves and unexpected dips.
- Avoid speeding out of control on steep downhill grades by shifting to a lower gear and gently pressing on the brakes.
- Don’t block traffic. Pull off the pavement if you want to stop to enjoy the scenery.
- Wear a seatbelt and make sure it is adjusted to fit snugly.
- Unpaved roads are subject to washouts. Check for conditions before traveling these routes.

Emergency? Dial 911

Summer Heat Claims Life

Ingrid and Gerhard were only a few days into their summer vacation in the United States when they arrived in Death Valley. A guidebook they had brought from home described the hike from Golden Canyon to Zabriskie Point, which proved irresistible to Gerhard. The trail was only a few miles from developed Furnace Creek so it seemed safe. Although he would be getting a late start at noon and the temperature was already more than 100°F (38°C) in the shade, Gerhard believed the hike would take only half an hour to complete. He was mistaken. Even on a mild winter day the nearly three mile hike over highly eroded badlands takes 1½ to 2 hours. He was also mistaken to think he would need less than a liter of water to complete the hike on that hot June day, which was becoming hotter by the minute.

Ingrid agreed to drive around and meet him at Zabriskie Point. From the viewpoint she could watch for Gerhard to cross over the colorful landscape. Three hours after their arranged rendezvous time there was still no sign of him, she became worried enough to seek help. She told rangers at the visitor center about her overdue husband and a search was begun in 112°F (45°C) heat. A quick overflight in the park airplane revealed a figure fitting his description in lower Gower Gulch, the next drainage south of Golden Canyon. Although rangers reached Gerhard only 1½ hours after he was first reported missing and only 5 hours after he had started his hike, he was dead. Heat stroke proved to be the culprit.

Death Valley National Park now receives more than one million visitors a year. In recent years, the biggest increase in visitation has been in summer months. People from around the globe are able to travel through the sweltering heat of the valley in the comfort of air conditioned cars. With that ease of travel, visitors often underestimate the dangers of being in one of the hottest places in the world.

Could this death have been prevented? With better planning, better timing, and enough water this story may have ended differently. (See “Staying Safe & Sound” above for more details.) We must all learn to respect the desert to enjoy it safely.
**DAY HIKES**

**Before starting a hike, learn the current conditions, water availability, and weather forecasts. Backpackers should obtain a free permit.**

Always carry water. Two liters for a short winter dayhike; 4 liters or more in the summer or for long hikes.

Hiking in low elevations can be dangerous when it is hot. The high peaks can be covered with snow in winter and spring. The best time to hike in the park is October to April.

**Dogs and bicycles are not allowed on trails or in the wilderness.**

**Things to Know Before You Go**

**Constructions trails are rare in this park. Trails are provided in places that are heavily used and sensitive to damage. If a trail is there, please use it. Most hiking routes in the park are cross-country, up canyons, or along ridges. Footing can be rough & rocky.**

**Interpretive trail guides are available.**

**Summer Hikes**

**Sand Dunes**
- 2 miles east of Stovepipe Wells on Hwy 190.
- Description: Graceful desert dunes, numerous animal tracks. Walk cross-country to 100 ft. high dunes. Best in morning or afternoon for dramatic light. Also good for full moon hikes. No trail.

**Mosaic Canyon**
- Start: Mosaic Canyon parking area.
- Description: Popular walk up a narrow, polished marble-walled canyon. First 0.5 mile is narrowest section. Some slickrock scrambling necessary. "Mosaic" fragments of rocks cemented together can be seen in canyon walls. Bighorn sheep sighted occasionally.

**Titus Canyon Narrows**
- Start: Titus Canyon Mouth parking area.
- Description: Easy access to lower Titus Canyon. Follow gravel road up wash 1.5 miles through narrows or continue to Klare Springs and petroglyphs at 6.5 miles.

**Keane Wonder Mine Trail**
- Start: Keane Wonder Mill parking area.
- Description: Steep, narrow trail from rim. Do not enter any mines - they are unstable and hazardous.

**Little Hebe Crater Trail**
- Start: Ubehebe Crater parking area.
- Description: Volcanic craters and elaborate erosion. Hike along west rim of Ubehebe Crater to Little Hebe and several other craters. Continue around Ubehebe’s rim for 1.5 mile loop hike.

**Death Valley Buttes**
- Start: Hell’s Gate parking area.
- Description: Climb prominent buttes at foot of the Grapevine Mountains. From Hell’s Gate, walk SW 0.5 mile to buttes. Scramble up ridge to summit of first butte. The second butte is more difficult and 0.7 mile further. Descend 300’ to saddle, then climb 500’ to next summit. The ridges are narrow and exposed with steep drop-offs. No trail.

**Fall Canyon**
- Start: Titus Canyon Mouth parking area.
- Description: Spectacular wilderness canyon near Titus Canyon. Follow informal path 0.5 mile north along base of mountains, drop into large wash at canyon’s mouth, then hike 2½ miles up canyon to 35’ dryfall. You can climb around the dryfall 300’ back down canyon on south side for access to best narrows. Canyon continues another 3 miles before second dryfall blocks passage. No trail.

**Winter Hikes**

**Salt Creek Trail**
- Start: Salt Creek parking area.
- Description: Boardwalk along small stream. Good for viewing rare pupfish and other wildlife. Best in late winter/early spring.

**Sand Dunes**
- Start: 2.2 miles east of Stovepipe Wells on Hwy 190.
- Description: Graceful desert dunes, numerous animal tracks. Walk cross-country to 100 ft. high dunes. Best in morning or afternoon for dramatic light. Also good for full moon hikes. No trail.

**Mosaic Canyon**
- Start: Mosaic Canyon parking area.
- Description: Easy access to lower Titus Canyon. Follow gravel road up wash 1.5 miles through narrows or continue to Klare Springs and petroglyphs at 6.5 miles.

**Titus Canyon Narrows**
- Start: Titus Canyon Mouth parking area.
- Description: Easy access to lower Titus Canyon. Follow gravel road up wash 1.5 miles through narrows or continue to Klare Springs and petroglyphs at 6.5 miles.

**Keane Wonder Mine Trail**
- Start: Keane Wonder Mill parking area.

**Little Hebe Crater Trail**
- Start: Ubehebe Crater parking area.
- Description: Volcanic craters and elaborate erosion. Hike along west rim of Ubehebe Crater to Little Hebe and several other craters. Continue around Ubehebe’s rim for 1.5 mile loop hike.

**Death Valley Buttes**
- Start: Hell’s Gate parking area.
- Description: Climb prominent buttes at foot of the Grapevine Mountains. From Hell’s Gate, walk SW 0.5 mile to buttes. Scramble up ridge to summit of first butte. The second butte is more difficult and 0.7 mile further. Descend 300’ to saddle, then climb 500’ to next summit. The ridges are narrow and exposed with steep drop-offs. No trail.

**Fall Canyon**
- Start: Titus Canyon Mouth parking area.
- Description: Spectacular wilderness canyon near Titus Canyon. Follow informal path 0.5 mile north along base of mountains, drop into large wash at canyon’s mouth, then hike 2½ miles up canyon to 35’ dryfall. You can climb around the dryfall 300’ back down canyon on south side for access to best narrows. Canyon continues another 3 miles before second dryfall blocks passage. No trail.

**Winter Hikes**

**Salt Creek Trail**
- Start: Salt Creek parking area.
- Description: Boardwalk along small stream. Good for viewing rare pupfish and other wildlife. Best in late winter/early spring.

**Sand Dunes**
- Start: 2.2 miles east of Stovepipe Wells on Hwy 190.
- Description: Graceful desert dunes, numerous animal tracks. Walk cross-country to 100 ft. high dunes. Best in morning or afternoon for dramatic light. Also good for full moon hikes. No trail.
Furnace Creek Area

Golden Canyon: Hikers entering the narrows of this canyon are greeted by golden badlands within. An interpretive pamphlet is available. Two-mile round-trip walk. Artist’s Drive: Scenic loop drive through multi-hued volcanic and sedimentary hills. Artist’s Palette is especially photogenic in late afternoon light. The 9-mile paved road is one-way and is only drivable with vehicles less than 25 feet in length. Devil’s Golf Course: Immense area of rock salt eroded by wind and rain into jagged spires. So incredibly serrated that “only the devil could play golf on such rough links.” The unpaved road leading to it is often closed after rain. Natural Bridge: Massive rock span across interesting desert canyon. The spur road is gravel and often rough. From the trailhead, the natural bridge is a ½ mile walk. Badwater: Lowest point in the Western Hemisphere, Badwater Basin is a surreal landscape of vast salt flats. A temporary lake may form here after heavy rainstorms. Do not walk on the salt flats in hot weather.

Stovepipe Wells Area

Sand Dunes: Tawny dunes smoothly rising nearly 100 feet from Mesquite Flat. Late afternoon light accentuates the ripples and patterns while morning is a good time to view tracks of nocturnal wildlife. Moonlight on the dunes can be magical, yet night explorers should be alert for sidewinder rattlesnakes during the warm season. Mosaic Canyon: Polished marble walls and odd mosaic patterns of breccia make this small canyon a favorite. The twisting lower canyon is so narrow hikers must walk through it single-file. Some rock scrambling is required. The canyon opens up after ½ mile to reveal the heights of Tucki Mountain, but hikers can continue another ½ miles. Salt Creek: This stream of salty water is the only home to a rare pupfish, Cyprinodon salinus. Springtime is best for viewing pupfish; in summer the lower stream dries up and in winter the fish are dormant. The wooden boardwalk loops ½ mile through stands of pickleweed and past pools reflecting badland hills. Wheelchair accessible.

Panamint Springs Area

Father Crowley Vista: A landscape of dark lava flows and volcanic cinders abruptly gives way to the gash of Rainbow Canyon below this viewpoint. Walk the dirt track east of the parking lot for a grand overlook of northern Panamint Valley. Titus Canyon: One of the largest and most scenically diverse canyons in the park. Within its lofty walls visitors can find multi-colored volcanic deposits, a ghost town, Indian petroglyphs, bighorn sheep, and deep, winding narrows. Titus Canyon is accessible to high-clearance vehicles via a 26-mile, one-way dirt road beginning outside the park. Those with standard vehicles may reach the canyon’s mouth from the west via a two-way section of road.

Scotty’s Castle Area

Scotty’s Castle: Prospector “Death Valley Scotty” claimed this elaborate Spanish-style mansion was built by gold from his fictitious mine. In reality, it was the 1920s vacation home of his wealthy friends. Today, living history tours of the castle’s richly furnished interior are given by costumed park rangers. Ubehebe Crater: More than 3000 years ago the desert silence was shattered by a massive volcanic explosion caused by the violent release of underground steam pressure. When the cinders and dust settled, this 600 feet deep crater remained. Although easily visible from the paved road, hikers may want to circle the crater rim to see smaller craters. Eureka Dunes: Rising majestically nearly 700 feet, these are the highest dunes in California. Isolated from other dunes, they are an evolutionary island, home to rare and endangered species of plants and animals. To give them extra protection, the dunes are off limits to sandboarding and horseback riding. The Racetrack: Rocks mysteriously slide across the dry lakebed of the Racetrack, leaving behind long tracks for visitors to ponder. A high-clearance vehicle is needed to traverse the 27 miles of rough dirt road, but ask at a ranger station for current road conditions.

Before venturing out into the park, stop at the visitor center or a ranger stations to obtain your park permit, get a map and to inquire about current road conditions. Enjoy your park.

Death Valley National Park has 3.3 million acres of desert and mountains, making it the largest national park in the contiguous United States. The possibilities for discovery are endless!
**The Best Time to Visit**

Death Valley National Park is usually considered a winter park, but it is possible to visit here all year. When is the best time to visit? It all depends on what you’re looking for.

**Autumn** arrives in late October, with warm but pleasant temperatures and generally clear skies. The camping season begins in fall and so do the Ranger Programs, which continue through spring. Although it is relatively uncrowded at this time of year, the weeks leading up to Death Valley’s 4th of July Encampment (second week in November) and the Thanksgiving holiday are busy.

**Winter** has cool days, chilly nights and rare rainstorms. With snow capping the high peaks and low angled winter light, this season is especially beautiful for exploring the valley. The period after Thanksgiving and before Christmas is the most uncrowded time of the entire year. Peak winter visitation periods include Christmas to New Year’s, Martin Luther King Day weekend in January and Presidents Day weekend in February. Reservations will be helpful.

**Springtime** is the most popular time to visit Death Valley. Besides warm and sunny days, the possibility of spring wildflowers is a big attraction. If the previous winter brought rain, the desert can put on an impressive floral display, usually peaking in late March to early April. Check our website for wildflower updates. Spring break for schools throughout the west brings families and students to the park from the last week of March through the week after Easter. Campgrounds and lodging are usually packed at that time, so reservations are recommended.

**Summer** starts early in Death Valley. By May the valley is too hot for most visitors, yet throughout the hottest months, visitors from around the world still flock to the park. Lodging and camping are available, but only the most hardy will want to camp in the low elevations in the summer. Most summer visitors tour by car to the main points of interest along the paved roads but do little else due to the extreme heat. Those wanting to hike will find the trails to Telescope Peak, Wildrose Peaks and Wildflowers are at their best in summer, but it is best to wait until autumn for most other hikes.

**Useful Books & Maps**

The Death Valley Natural History Association is a non-profit organization dedicated to providing visitors to Death Valley National Park with a quality educational experience. These suggested offerings from our publications were chosen to help you plan your visit and make the most of the time you spend in Death Valley. Prices may change without notice.

**A Traveler’s Guide to Death Valley National Park** (Lawson) Beautiful color photographs, informative text and maps organized into chapters describing areas of the park to visit in one day. 42 pages. $8.95

**Best Easy Day Hikes: Death Valley** (Cunningham & Burke) Includes concise descriptions and simple maps of 23 short, easy-to-follow routes within the park. 120 pages. $6.95

**Hiking Death Valley: A Guide to its Natural Wonders and Mining Past** (Dignam) A comprehensive guidebook providing 280 hiking/driving destinations ranging from easy day hikes to multiple-day treks. 542 pages. $17.95

**Death Valley SUV Trails** (Mitchell) This is a four-wheeler’s guide to 46 interesting back road excursions in the greater Death Valley Region. 314 pages. $19.95

**Death Valley National Park Guide Map** (Automobile Club of Southern California) A detailed map including points of interest, lodging and restaurants, campgrounds, supplies and services with descriptions. $3.95

**Southern Nevada & Death Valley Area Map** (California State Automobile Association) A map covering the area from Las Vegas to the Southern Sierras. Includes Death Valley, Lake Mead, Sequoia-Kings Canyon and Mojave Preserve. $3.95

Recycling
Join the National Park Service, Xanterra Parks & Resorts, U.S. Postal Service and Timbisha Shoshone Tribe by recycling.
Look for recycling bins at the campgrounds, visitor center, ranger stations, post office and hotels.
- Paper: mixed paper, including magazines, books, & newspapers
- Aluminum cans: please crush
- Glass containers: please rinse
- Plastic bottles: rinse & crush
All visitors to Death Valley National Park must pay an entrance fee or present a National Park Pass, Golden Eagle, Golden Age or Golden Access Pass.

Stop at an Entrance Fee Station to pay the park entrance fee and receive an official park map.

80% of the User Fees (Entrance and campground) collected at Death Valley stay within the park for maintenance, infrastructure, interpretive, and natural & cultural resource projects.
