The Many Glacier Campground is located approximately two miles west of the opulent Many Glacier Hotel and immediately south of the Swiftcurrent Auto Camp, forming the least expensive tier in the area’s hierarchy of visitor services. The camptender’s cabin is centrally located within the campground, amidst heavy timber.

This is a single-story rectangular building constructed of an exposed-log framing system with vertical-plank siding. The building rests on a concrete-pier foundation and is covered by a log-frame side-gable roof surfaced with wood shingles. Pole purlins and rafters are exposed and the roof features a cut- and coursed-stone chimney extending from the gable ridge. Each gable end contains a louvered-wood vent.

A two-step stoop of coursed, cut stone provides access to the vertical-plank door offset within the front (north) elevation. The door is secured with interior cross braces and is paired with a modern one-light screen door, painted white. Windows are six- or four-light wood-frame, casement, arranged in groups of two or three. (The front (north) elevation features a ribbon of three six-light windows; the rear (south) elevation features a ribbon of three four-light windows. The west (end) elevation is dominated by a centered pair of six-light windows. The east (end) elevation features a centered pair of four-light windows.) The doors and windows are "trimmed" with the exposed log framing members.

The residence contains a bedroom, kitchen, living room, and bathroom. Bedroom and living room floors are finished with 4” fir planks. The kitchen and bath floors are finished with rolled vinyl in a vintage pattern. All walls and ceilings are finished with vertical planks/3” battens (painted in the kitchen and bath). The original wall-mounted cupboards, vertical-plank interior doors, 5” window and door surrounds, and historic porcelain single-trough kitchen sink remain. The countertops, light fixtures, and all bathroom fixtures are modern. A pot-bellied stove, with brick chimney, provides heat.
Many Glacier Campground Camptender's Cabin

8. Statement of Significance

Certifying official has considered the significance of this property in relation to other properties:

Applicable National Register Criteria: A; C

Areas of Significance: Government; Entertainment/Recreation; Architecture

Criteria Considerations (Exceptions): N/A

Period(s) of Significance: ca. 1934-1945

Significant Person(s): N/A

Significant Dates: N/A

Cultural Affiliation: N/A

Architect/Builder: National Park Service

Narrative Statement of Significance

This small cabin is significant at the local level for its association with a significant trend in park visitation patterns: the increase of middle-class automobile tourists and NPS development of infrastructure appropriate to this new clientele. The building, with its exposed-log framing system, also exemplifies NPS rustic architecture. It is eligible for listing on the National Register of Historic Places with significance in history and architecture (criteria A and C). The cabin is a component of the Minor Developed Areas property type, as defined in the Glacier National Park Multiple Property Listing.

The increase in auto camping in Glacier National Park during the 1920s and 1930s encouraged the NPS to expend more money and effort toward the improvement of park campgrounds. By the early 1930s, early camping sites, haphazardly developed, had been superseded by newly designed major campgrounds at sites such a Sprague Creek, Many Glacier, Roes Creek (Rising Sun), Two Medicine, and Avalanche. Plans were laid to provide substantial support services for users of each of these facilities, including service stations, soda fountains, and campstores. An increased NPS presence was also warranted: campgrounds were assigned seasonal "camptenders" who performed custodial duties and provided assistance to visitors.

At several campgrounds, small residences for the camptenders were constructed during the 1930s. Most were built of lumber with exposed log framing, matching the camp's comfort stations. The Many Glacier Campground caretaker's cabin is believed to have been built ca. 1934: the 1933 Many Glacier Development Plan (part of the park Master Plan) notes that "a camptenders cabin is needed at the new campground location, or at a point between the picnic and campground areas" (USDI 1933: sheet 25). While HRA was unable to locate a dated drawing for the cabin, its architectural style is one frequently utilized in the park in the 1930s. Park personnel reported that development of Many Glacier Campground facilities was a response to "the expansion of the 'Automobile Tourist Patron' which [sic] prefers the campground to the Hotel ... . The National Park Service is keeping abreast of the times by providing the proper facilities for taking care of this rapidly increasing newer type of Tourist Trade" (anonymous 1933:1).

Verbal Boundary Description

Boundaries encompass only the building and its immediate, wooded surroundings, comprising an area approximately 40' x 40' centered on the building.

Boundary Justification

These arbitrary boundaries do not encompass the area of historic association -- the Many Glacier Campground -- and may be expanded once an historic context for campgrounds has been developed and the campground is evaluated.

11. Form Prepared By

name/title: Ann Hubber/Historian
organization: Historical Research Associates, Inc.
date: 6/1995
street & number: P.O. Box 7086
telephone: (406) 721-1958
city or town: Missoula
state: MT
zip code: 59807-7086

Property Owner

name/title: National Park Service
organization: Historical Research Associates, Inc.
date: 6/1995
street & number: Park Headquarters
telephone: (406) 888-5441
city or town: West Glacier
state: MT
zip code: 59936
7. Narrative Description, cont.

The building is unmodified and its setting unimpaired by modern development. The interior floorplan and dominant design details — the vertical plank wall and ceiling finishes and wide window and door trim — remain unaltered. The interior contributes to the building’s significance.
