Welcome to Grand Teton National Park

Few landscapes in the world are as striking and memorable as that of Grand Teton National Park. Rising abruptly from the valley floor, the Tetons offer a testament to the power and complexity of nature. The mountains, valleys, lakes, rivers, and skies are home to diverse and abundant plants and animals.

People have been living in the shadow of the Tetons for more than 10,000 years. The human history of this area is extensive, beginning with American Indian prehistoric life, to the early Euro-American explorers, and the more recent frontier settlement, of which more than 300 historic structures remain.

This spectacular mountain range and the desire to protect it resulted in the establishment of Grand Teton National Park in 1929. Through the vision and generous philanthropy of John D. Rockefeller, Jr., additional lands were added, creating the present day park in 1950.

Grand Teton National Park is truly a special and unique place. With thoughtful use and careful management, it can remain so for generations to come. As with other sites in the National Park System, Grand Teton preserves a piece of the natural and cultural heritage of America for the benefit and enjoyment of future generations.

While you are here, take a moment to put your cares aside, stroll through a sagebrush meadow, hike a park trail, sit on a quiet lakeshore, and lose yourself to the power of this place.

We hope you will be refreshed and restored during your visit, and stay connected to this magnificent landscape long after you have returned home.

Pets in the Park?

To ensure that you and your pet enjoy a safe visit, follow all pet regulations while inside the park. Wildlife may be drawn to pets and their owners; pets can wander away and may never be found—the park is a wild place!

Pets are allowed inside Grand Teton National Park under the following conditions: they must be restrained at all times and are not permitted on hiking trails, inside visitor centers or other facilities.

See page 7 for more information.

Enjoy a Safe Visit!

Watch for wildlife on the road, especially in the evening and morning.

Maintain at least 300 feet from large animals.

When stopping to view wildlife, pull over in a designated turnout. Do not stop on the roadway for your safety and others.

Be aware of changing weather conditions, lightning and thunderstorms are common during the summer.

See page 7 for more information.

As You Drive, Keep Them Alive!

Annual Impacts of Vehicle Collisions with Wildlife

$155,000 Personal property damage

100 Large animals killed annually

Slow Down! Stay Alert!

Flagg Ranch Food Service

Flagg Ranch Information Station

May 6-Sept 4 (307) 543-2252

NPS visitor center, open 8 a.m.-7 p.m. in summer, 8 a.m.-5 p.m. other seasons. Information, audiovisual programs, exhibits.

Joe's Chuckwagon

May 26-Oct 1 (307) 543-2861

One- and two-bedroom cabins with kitchens, located on the Snake River (307) 543-2861.

Traditional western fare. Open daily for breakfast, lunch, and dinner.

One- and two-bedroom cabins with kitchens, located on the Snake River.

The Teton Range dominates the skyline of Grand Teton National Park, drawing the attention of all who pass through Jackson Hole. The geologic events that created this dramatic scenery influence the distribution and abundance of the plants and animals found here. Herbivores—plant-eating animals like moose, mule deer, and elk—inhabiting areas where their food exists.

Caribou—meat-eating animals like bears, coyotes, and weasels—follow the herbivores they prey upon.

The Teton Range exists due to movement on the Teton fault located along the eastern range front. Starting 10 to 13 million years ago, and Ice Age glaciers began to sculpt the landscape. Periodically ice sheets up to 3,500 feet thick covered most of what is now Yellowstone National Park. The last glacial cirques, U-shaped canyons, and polished bedrock. These glaciers spilled from the canyons onto the valley floor, gouging out basins and depositing moraines. Terminal moraines mark the furthest extent of the glaciers' flow and create natural dams for lakes such as Leigh, Jenny, Bradley, Taggart, and Phelps.

Nearly two million years ago, and Ice Age glaciers began to sculpt the landscape. The climate cooled nearly two million years ago, and Ice Age glaciers began to sculpt the landscape. Periodically ice sheets up to 3,500 feet thick covered most of what is now Yellowstone National Park. The last glacial cirques, U-shaped canyons, and polished bedrock. These glaciers spilled from the canyons onto the valley floor, gouging out basins and depositing moraines. Terminal moraines mark the furthest extent of the glaciers' flow and create natural dams for lakes such as Leigh, Jenny, Bradley, Taggart, and Phelps.

The Snake River continues to cut through the valley. Floodwaters washed away topsoil and left behind glacial outwash plains of sand, gravel, and cobbles. Sagebrush, grasses, and wildflowers have adapted to thrive in this rocky, semi-arid landscape. Some mammals and birds favor the sagebrush flats. Bison graze on grasses, pronghorn eat sagebrush, and sage grouse, large chicken-like birds, eat sagebrush leaves.

As you explore Grand Teton National Park, read its landscape. Note the handiwork of glaciers on the mountains and canyons, and the old river terraces carved by the Snake River. Watch for the wildlife habitat that provides clues to the ancient processes that formed and shaped this area.

Peak Names

**Static Peak**
In the Teton Range north of Death Canyon. Named because it is often hit by lightning.

**Buck Mountain**
Named for George A. Buck, recorder for T.M. Bannon's 1898 mapping party. Bannon gave the name "Buck Station" to the triangulation station he and George Buck established on the summit in 1898.

**Grand Teton**
Highest mountain in the Teton Range. Named by French trappers. Upon viewing the Teton Range from the west, the trappers dubbed the South, Middle, and Grand, Le Tros Tétons, meaning "the three breasts." Wilson Price Hunt called them "Pilot Knobs" in 1811 because he had used them for orientation while crossing Union Pass. In his Journal of a Trapper, Osborne Russell said that the Shoshone Indians named the peaks "Hoary Headed Fathers."

**Mount Owen**

**Teevenot**
Towers above Cascade Canyon and Jenny Lake. Its name comes from the Shoshone word meaning “many pinnacles.” Teevenot probably once applied to the entire Teton Range, rather than just this one peak. Floyd Fryxell and Phil Smith named the peak when they successfully completed the first ascent of the mountain in 1929.

**Mount Saint John**
Between Cascade and Paintbrush canyons. A series of peaks of nearly equal height. Named for Orestes St. John, geologist of Hayden's 1877 survey, whose monographs of the Teton and Wind River ranges are now classics.

**Mount Moran**
Most prominent peak in the northern end of the Teton Range. Named by Ferdinand V. Hayden for the landscape artist Thomas Moran, who traveled with the 1872 Hayden expedition into Yellowstone and into Pierre's Hole on the western side of the Teton Range. He produced many sketches and watercolors from these travels.

From the book Origins by Hayden and Nielson.
For Wildlife Observers and Photographers

Be a responsible wildlife observer. Remember that patience is rewarded. Use binoculars, spotting scopes or long lenses for close views and photographs. Always maintain a safe distance of at least 300 feet from large animals such as bears, bison, moose, and elk. Never position yourself between an adult and its offspring. Females with young are especially Protective.

It is illegal to feed wildlife, including ground squirrels and birds. Feeding wild animals makes them dependent on people, and animals often bite the hand that feeds them.

Do not harass wildlife. Harassment is any human action that causes unusual behavior, or a change of behavior, in an animal. Repeated encounters with people can have negative, long-term impacts on wildlife, including increased levels of stress and the avoidance of essential feeding areas.

Please remember, nesting birds are easily disturbed. For wildlife, raising young is a private affair. If an adult bird on a nest flies off at your approach, circles you, or screams in alarm – you are too close to the nest. Unattended nestlings readily succumb to predation and exposure to heat, cold, and wet weather.

Allow other visitors a chance to enjoy wildlife. If your actions cause an animal to flee, you have deprived other visitors of an opportunity. Use an animal’s behavior as a guide to your actions, and limit the time you spend with wildlife, just as you would when visiting a friend’s home. Follow all park regulations and policies.

Wildlife Caravan

September 5 – September 30
Daily 5:00 p.m. to 8:00 p.m.
For reservations call the Moose Visitor Center at (307) 739-3399

Travel with a ranger for evening wildlife viewing. You will visit several areas, using your own vehicle or carpooling. Ride sharing is encouraged because the caravan is limited to ten vehicles. Dress warmly and bring binoculars or spotting scopes. Check in at the Moose Visitor Center at least ten minutes before the tour. This activity is free of charge.

Oxbow Bend Wildlife Watch

September 5 – September 30
(Sunday, Monday, Wednesday, and Friday)
Daily 6:00 p.m. to 7:30 p.m.
No reservations required.

Join a ranger at the Oxbow Bend Overlook for an evening wildlife watch. Stop by anytime from 6:00 p.m. – 7:30 p.m. to scan the Oxbow for birdlife and large mammals.

Where to Look For Wildlife

Always Keep a Safe Distance When Viewing Wildlife

All animals require food, water, and shelter. Each species also has particular living space, or habitat, requirements. To learn more about wildlife habitats and animal behavior, attend ranger-led activities.

OXBOW BEND
One mile east of Jackson Lake Junction. Slow-moving water provides habitat for fish such as suckers and trout, which become food for river otters, ospreys, bald eagles, American white pelicans, and common mergansers. Look for swimming beavers and muskrats. Moose browse on abundant willows at the water’s edge. Elk occasionally graze in open aspen groves to the east.

GROS VENTRE RIVER
Watch for wildlife along the Gros Ventre River from the south park boundary up to the town of Kelly. Look for moose, coyote, elk, and deer. Moose are frequently seen in the early morning along this river; watch for sparring bull moose during the fall months.

MORMON ROW
East of Highway 26/89/14, one mile north of Moose Junction. Along Mormon Row and Antelope Flats Road, bison and pronghorn can be seen grazing in spring, summer, and fall. Also watch for coyotes, Northern harriers, and American kestrels hunting mice, Uinta ground squirrels, and grasshoppers in open fields. Sage grouse, sage thrashers, and sparrows also frequent the area.

SNOWY MOUNTAIN RIVER
Watch for wildlife along this river; look for wapiti, bighorn sheep, and American martins. Beavers and muskrats often build dams and lodges in the river. Beavers and muskrats are often seen along the river.

CASCADES CANYON
West of Jenny Lake. Look for, but do not feed, golden-mantled ground squirrels at Inspiration Point. Pikas and yellow-bellied marmots live in scattered boulder fields. Male deer and moose occasionally browse on shrubs growing at the mouth of the canyon. Listen for the numerous songbirds that nest in the canyon.

BLACKTAIL PONDS
Half-mile north of Moose on Highway 26/89/14. Old beaver ponds have filled in and now support grassy meadows where elk graze during the cooler parts of the day. Several kinds of ducks feed in the side channels of the Snake River. Moosebrowse on willows growing along the river.

Give Wildlife a Brake®

Moose, bison, elk, mule deer, pronghorn, black and grizzly bears — a host of large animals inhabit Grand Teton National Park, the Rockefeller Parkway, Yellowstone National Park, and surrounding areas. Animals are on roads and highways at any time of the day or night. For your own safety and for the protection of wildlife, please drive carefully and stay alert.

What Kind of Bear Is That?

Color is not a reliable indicator of the species. Contrary to their name, black bears are often brown, cinnamon, and/or blond in color.

Black Bear

Color

Ranges from blond to nearly black, sometimes have silver-tipped hairs that give them a grizzled appearance.

Physical Features

Black bears have a straight facial profile and a large hump above the shoulders. Their claws are short and curved, usually not extending more than 1.5 inches (4 cm) beyond their toes.

How to View Wildlife

Antelope Flats Road, bison and pronghorn

For Wildlife Observers

Grizzly Bear

Color

Ranges from blond to nearly black, sometimes have silver-tipped hairs that give them a grizzled appearance.

Physical Features

Grizzly bears have a dished, or concave, facial profile and a large hump of heavy muscle above the shoulders. Their claws are long and relatively straight, extending two at more inches (5 cm) beyond their toes.

Natural Communities in the Park

The natural systems of Grand Teton National Park and Jackson Hole create a magnificent environment showcasing an incredible diversity of vegetation and wildlife. Many natural communities in the park are defined by the plants and animals that live within them.

FOREST COMMUNITIES
There are a number of forest communities in Grand Teton National Park. Because of the variations in the height of trees, shrubs, and grasses, forests support a wide variety of animal species. The most extensive of the forest communities is the lodgepole pine forest community, which extends from the southern portion of Yellowstone National Park and along the lower elevations of the Tetons to the south end of the range. Elk and mule deer find shade here during sunny, summer days. Red squirrels inhabit the trees, gathering seeds and storing them for the long winter. Snowshoe hares, deer mice, and red-backed voles are among the small mammals found on the forest floor. Black and grizzly bears, short-tailed weasels (ermine) and pine martens prey upon smaller animals. Colorful western tanagers fly through the less dense parts of the forest canopy.

Other forest communities include Douglas fir and spruce-fir forest communities. Stands of Douglas fir are found on either dry, south-facing slopes up to about 8,000 feet or on dry north-facing slopes at lower elevations. Voles, mice, and gophers also live here; they are hunted by great horned owls. Other birds found amongst the Douglas fir include chickadees, nuthatches, pine siskins, Cassin's finches, and dark-eyed juncos.

Spruce-fir forests are dominated by Engelmann spruce and subalpine fir and are often located at higher elevations. Moose feed extensively on subalpine fir in the winter months and elk and deer use these forests at other times during the year. Other mammals can be found here, including long-tailed weasels, pine martens, mountain lions, and the rare wolverine. Williamson's sapsuckers, hairy woodpeckers, Steller's and gray jays, olive-sided flycatchers, and mountain chickadees are among the birds occupying this forest type.

SAGEBRUSH COMMUNITIES
The sagebrush community is the most visible community in Grand Teton, covering most of the valley floor. Rocky, well-drained soils make it difficult for most plants to survive, but hardy big sage, low sage, antelope bitterbrush, and more than 20 species of grasses thrive here. Though it appears barren and sparse, this is a surprisingly diverse community.

Sage grouse use sage for food, shelter, and nesting sites. Arrowleaf balsamroot and spring beauty add spring color to the silvery green of the flats. Small mammals such as Uinta ground squirrels, deer mice and least chipmunks make their homes here. Badgers can sometimes be seen digging burrows while coyotes and wolves may lope across the cobbly plains.

Pronghorn are summer residents on the sagebrush flats; they must migrate south to avoid deep winter snows. Large herds of elk feed on the grasses during the morning and evening hours of spring, summer, and fall. Areas where bitterbrush is abundant are good foraging places for moose, especially in fall and winter. Birders can find western meadowlarks, sage thrashers, green-tailed towhees, vesper and Brewer's sparrows, and raptors of many kinds among the sage.

WET MEADOW COMMUNITIES
Wet meadows and willow flats are covered by water for at least part of the year. A high water table and good soil make an abundance of grasses, sedges, and forbs possible. Small mammals and birds that rely on this type of vegetation are common here. Willows also provide critical habitat for moose, which feed heavily on them, especially in late winter.

Whatever the community, it is important to remember that the wildlife, plants, and habitats within Grand Teton National Park are protected. While birding or watching animals, please keep a respectful distance.

Please do not pick or disturb the vegetation. In order to continue to enjoy this national park, we must all work to preserve it.
Self-Guiding Trails around the Park

Sample the cultural history, natural history, and mystery of Jackson Hole. Obtain trail guides at trailheads. Expanded versions of the trail guides for Cascade Canyon, Taggart Lake and the Colter Bay area are also sold at park visitor centers.

CASCADE CANYON TRAIL
Follow part or all of the Cascade Canyon Trail. From the east shore boat dock to Inspiration Point the distance is 5.8 miles roundtrip (2.4 miles via shuttle boat).

CUNNINGHAM CABIN TRAIL
Cunningham Cabin is located six miles south of Moran. Take a 1/2-mile walk to learn about the early ranching history of Jackson Hole.

FLAGS RANCH AREA
The Polecat Creek Loop Trail (2.3 miles) and nearby Flagg Canyon Trail (5 miles roundtrip) offer scenic hiking opportunities. Leaflets available at visitor centers.

MENOR’S FERRY TRAIL
A 1/2-mile loop begins at the Chapel of the Transfiguration parking lot in Moose, and passes Bill Menor’s cabin and ferry, and an exhibit at the Maud Noble cabin.

TAGGART LAKE TRAIL
The 3.2-mile Taggart Lake Trail traverses a major portion of the 3,028-acre Beaver Creek fire of 1989. The trail begins at the Taggart Lake parking area, three miles northwest of Moose.

ACCESS TRAIL AT STRING LAKE
A paved trail follows the shore of String Lake for 1/2-mile. Wayside exhibits explain the formation of glacial lakes.

COLTER BAY AREA
A variety of trails lead from the vicinity of the Colter Bay Visitor Center, including the Lakeshore Trail, paved for 1/4-mile.

FIRE WAYSIDES
Interpretive signs at Cottonwood Creek picnic area, String Lake, and Jackson Lake overlook explain various aspects of fire ecology and local fire history.

SCENIC TURNOUTS
Consult interpretive signs at scenic turnouts to learn about the natural history and geology of the Teton Range and Jackson Hole.

Young Naturalists!

- Earn a patch or badge
- For kids of all ages
- $1 donation

Pick up the Grand Adventure newspaper at any visitor center.

This is Bear Country

A FED BEAR IS A DEAD BEAR
Bears become aggressive after even one encounter with human food. Unfortunately, people often feed bears without realizing it. Bears often get food from backpacks and coolers that are left unattended in campgrounds or along trails. Remember, bears can be anywhere in the park at any time, even if you can’t see them. Help keep park bears wild and safe. Keep your food items safe from bears by locking them in your car or a bear box. Failure to follow regulations is a violation of federal law and may result in citations and fines.

KEEP A CLEAN CAMP
After eating and before leaving camp or sleeping, assure that you have a clean, bear-proof campsite.

- All food, containers, and utensils must be stored in a bear box or hidden in a closed, locked vehicle with windows rolled up.
- The only exceptions are during the transport, preparation, and eating of food.
- Trash and garbage must be stored in the same manner as food, or placed in bear-resistant trash cans or dumpsters.
- Treat odorous products such as soap, deodorant, toothpaste, suntan lotion, and perfumes in the same manner as food.
- For your safety, absolutely no food, foodstuffs, garbage, or odorous products may be stored in tents or sleeping bags.
- Ice chests, thermoses, water containers, barbecue grills, stoves, dishes, and pans must be stored in the same way as food—hidden inside a locked auto or bear box.

BEAR ETIQUETTE
- If you encounter a bear, do not run. If the bear is unaware of you, detour quickly and quietly. If the bear is aware but has not acted aggressively, back slowly away while talking in an even tone.
- Never approach a bear for any reason.
- Never allow a bear to get human food. If approached while eating, put food away and retreat to a safe distance (100 yards/91 meters).
- Never abandon food because of an approaching bear. Always take it with you.
- Never throw your pack or food at a bear in an attempt to distract it.
- Never bury food scraps, containers, or fish entrails. Put them in garbage cans.
- Never leave food, containers, or garbage unattended in camp. Bears are active day and night.

Help Save Our Bears!

Help us keep our bears wild and healthy. Don’t leave backpacks, coolers, or bags containing food unattended for ANY amount of time. Take them with you or put them in a car or bear box. Even food that is left out accidentally can mean removal or death for a bear. Report all bear sightings and incidents to a visitor center or ranger station.
For Your Safety

PLANTS & ANIMALS
All plants and animals are part of the natural processes and are protected within the park and parkway. Leave plants and animals in their natural setting for others to enjoy. Even picking wildflowers is prohibited. Keep a respectful distance from all animals to avoid disturbing their natural routines. Larger animals are quick, powerful, and unpredictable. Getting too close can result in serious injury. Take special care to avoid encounters with bears and to help maintain their natural fear of humans. Many small animals can carry diseases and should never be touched or handled. Allow them to find all of their own food. The park protects and preserves their health and survival. No matter how convincingly the animals beg, feeding is prohibited.

HIKING
Hikers are reminded to stay on trails; shortcutting is prohibited because it damages fragile vegetation and causes erosion. Visitor centers and the Jenny Lake Ranger Station sell topographic maps and inexpensive trail guides. Sturdy footwear is essential. Know your limits, watch for wildlife on roads, and be prepared for an emergency. Permits are not required for day hiking. Trailhead parking areas fill early during the day in July and August, so start your hike early to avoid parking problems. In spring, minimize impacts by staying-covered and you may need an ice axe.

FISHING
Whitefish and cutthroat lake, and brown trout inhabit lakes and rivers of the park and parkway. Obtain fishing regulations at the Moose, Jenny Lake, or Colter Bay visitor centers. A Wyoming fishing license is required for fishing in the park and parkway and may be purchased at Signal Mountain Lodge, Colter Bay Marina, Colter Bay Village Store, and Flagg Ranch Lodge. Fishing in Yellowstone National Park requires a separate permit (fee charged); purchase permits at Yellowstone visitor centers and ranger stations. The use of non-native baitfish is prohibited in all parks.

JACKSON LAKE
Continued drought conditions are causing low water levels in Jackson Lake. Contact visitor centers for information on the availability of services at Lees’s Marina and Colter Bay Marina. Low water levels will increase the risk of boats striking submerged objects and landforms that are normally well beneath the surface. Use caution when boating.

BOATING
Motorboats are permitted on Jenny (no horsepower maximum), Jackson, and Phelps lakes. Human-powered vessels are permitted on Jackson, Jenny, Phelps, Emma Matilda, Teoc Ocean, Taggart, Bradley, Bearpaw, Leigh, and String lakes. Sailboats, water skiing, and windsurfers are allowed only on Jackson Lake. For motorized craft, the fee is $10 for a 7-day permit and $40 for an annual permit; for nonmotorized craft, the fee is $3 for a 7-day permit and $10 for an annual permit. Jet skis are prohibited on all waters within the park. Permits may be purchased at the Moose or Colter Bay visitor centers.

FLOATING THE SNAKE RIVER
Only human-powered rafts, canoes, kayaks and are allowed on the Snake River within the park and parkway. Registration ($30 for a 7-day permit, $60 for an annual permit) of non-motorized boats is required and may be completed at the Moose Visitor Center or Colter Bay Visitor Center. Read the launch site bulletin boards for current river conditions. On the surface, the Snake does not seem very powerful, but only experienced floaters should attempt this swift, cold river that has many braided channels and debris jams.

BACKPACKING
Grand Teton National Park has more than 290 miles of trails of varying difficulty. Obtain the required, free-backcountry permit for overnight trips at the Moose or Colter Bay visitor centers or the Jenny Lake Ranger Station. One-third of backcountry campsites in high use areas may be reserved in advance from January 1 - May 15; there is a fee of $5 per reservation. Pets are not allowed on park trails or in the backcountry.

CAMPFIRES
Campfires are allowed without a permit at designated campgrounds and picnic areas within installed or designated fire rings, unless fire restrictions are in effect. A permit may be obtained for campfires below the high water line of Jackson Lake at the Colter Bay Visitor Center. Campfires are prohibited in all other areas of the park and parkway.

SWIMMING
Swimming is permitted in all lakes. There is a designated swimming beach at Colter Bay with picnic facilities, however, due to the presence of thermoclines, the water is cold. The Snake River is a swift and cold river presenting numerous dangers; swimming is not recommended.

HOT SPRINGS
Thermal water can harbor organisms that cause a fatal meningitis infection and Legionnaire’s disease. Exposing your head to thermal water by immersion, splashing, touching your face, or inhaling steam increases your risk of infection. Obtain more information at any ranger station or visitor center.

PETS
Pets must be restrained on a leash at all times. Pets are not allowed on park trails or in the backcountry (which begins 50 feet from roadways), in boats on the Snake River, in boats on lakes other than Jackson Lake, or in visitor centers. Pets are not allowed on ranger-led activities. Kennels are available in Jackson.

CLIMBING
There are many risks and hazards associated with climbing and mountain travel. Experience and good judgment are essential. The Jenny Lake Ranger Station, the center for climbing in Grand Teton National Park, is staffed from late May to mid-September by climbers who can provide up-to-date weather and route conditions. Registration is not required for day climbs and cross-country hiking.

Backcountry permits are required for all overnight climbs. The park DOES NOT check to see that you get safely out of the backcountry. Leavemen, advice, and the wilderness lifestyle are not allowed on trails in the backcountry. Safe climbing and backpacking travel is not advised.

BICYCLES
Bicycles are permitted on public paved and unpaved roadways with automobiles and on the Colter Bay Marina breakwater. Ride on the right side of the road in single file and wear a helmet at all times. Riding bicycles or other wheeled vehicles in the backcountry, on- or off-trail, is prohibited.

Make the Most of Your Park Visit

Short on time? Wondering how to make the most of your trip in Grand Teton National Park? Take a look at a few of the suggestions below to help plan your visit. Use the map on page 12. The distance from the south entrance of Yellowstone National Park to the south boundary of Grand Teton National Park is 56 miles, approximately an hour and a half with stops it 1 1/2 hours. Please follow posted speed limits, watch for wildlife on roads, and be prepared for occasional delays due to road construction.

Menor’s Ferry/Chapel of the Transfiguration
Turn off the south side of the Snake River to the southeast side of the Moose. The Menor’s Ferry Trail, less than 1/2-mile long, affords a look at homesteading and pioneer life in Jackson Hole. Visit Bill Menor’s cabin and country store. View a replica of the ferry that crossed the Snake River at the turn of the century. The altar window of the Chapel of the Transfiguration frames the tallest Teton peaks.

Antelope Flats/Kelly Loop
Antelope Flats, 5 miles south of the Jackson Hole Airport, the Menor’s Ferry Trail begins, follows the Gros Ventre River, then joins the Kelly Loop Trail. The Gros Ventre Valley was formed by an immense glacier that formed by an immense glacier...
Camping in the Park

There are two trailer villages and five campgrounds in Grand Teton National Park and John D. Rockefeller, Jr. Memorial Parkway. All are operated by park concessioners. There are eight campsites on Grassy Lake Road that have no potable water and are free of charge.

**CAMPGROUNDS**

The campground fee is $15 per night per site and $7.50 for Golden Age/Golden Access concession holders. Jenny Lake and Colter Bay have hiker/biker sites available for $5 per night. Jenny Lake Campground is open only for tent camping. All campgrounds have modern comfort stations, but do not have utility hookups.

The maximum length of stay is seven days per person at Jenny Lake and two days at all other campgrounds – no more than 30 days in the park per year. These campgrounds operate on a first-come, first-served basis and reservations are accepted at some campgrounds. Campgrounds often fill during July and August. Approximate filling times are listed. For status of campgrounds, contact entrance stations or visitor centers. Additional camping facilities are available in nearby national forests and other areas outside the park. Camping is not permitted within the park along roadsides, in overlooks, or in parking areas. Doubling up in campsites is not permitted, and there are no overflow facilities.

**GROUP CAMPING**

Reservations are available for group camping at Colter Bay and Gros Ventre campgrounds. The sites range in capacity from 30 to 100 people. The nightly use fee is $3 per person plus a $15 nonrefundable reservation fee. Organized groups such as youth, religious, and educational groups may use the group campsite. For more information, call (800) 628-9988 or (307) 543-3100.

**TRAILER VILLAGES**

Colter Bay and Flagg Ranch trailer villages have full hook-ups, showers, and laundry. Colter Bay has 112 sites. Flagg Ranch has 100 trailer and 75 tent sites. Advance reservations are advisable. See page 2 for details.

Check at park visitor centers for information concerning additional trailer parks or campgrounds located outside the park.

**RECYCLING CENTERS**

All campgrounds in Grand Teton National Park and John D. Rockefeller, Jr. Memorial Parkway are managed by authorized concessioners. Grand Teton Lodge Company operates the campgrounds at Colter Bay, Jenny Lake and Gros Ventre, while Signal Mountain Lodge operates Lizard Creek and Signal Mountain campgrounds.

These concessioners fund campground improvements as a part of their contracts. Improvements for 2006 include the placement of recycling containers in park campgrounds. Collectively, these two concessioners recycle more than 170 tons of material annually. When you stay in any park campground, please use the recycling containers to help keep Grand Teton clean and pleasant for other campers.

---

**Water Warning**

Cool, crystal clear stream water looks tempting to drink. As more and more people camp and hike in the backcountry, the incidence of intestinal infection from drinking untreated water has increased throughout the West. Guardia, campylobacter, and other harmful bacteria may be transmitted through untreated water. Drinking untreated water can make you ill. Carry sufficient water from approved sources, such as water spigots and drinking fountains in the park and parkway, when hiking or enjoying any outdoor activity. If you must use water from lakes or streams, boil water 3-5 minutes to kill harmful microorganisms or filter with an approved device.

---

**Backcountry Comfort**

Pit toilets are provided at many trailheads, but there are no toilets in the backcountry. Be sure to urinate at least 200 feet from streams and lakes. To prevent contamination of waterways, bury feces in a hole 6-8 inches deep at least 200 feet from streams and lakes. Pack out used toilet paper, tampons, sanitary napkins, and diapers in sealed plastic bags. Do not bury or burn them.
Entrance Fees 2006

All Americans support national parks through tax dollars. Congress allocates some of those tax dollars to each park area. However, costs for achieving National Park Service goals in Grand Teton and other national parks have greatly increased in recent years. Operational funding has not kept pace with escalating needs. Unfortunately, funding available through the appropriations process is sufficient only to conduct the yearly operation of the park. Money is not available for major maintenance projects involving roads, trails, facilities, and infrastructure. In 1997, Congress authorized the Recreational Fee Demonstration Program, which allowed selected national parks—including Grand Teton and Yellowstone national parks—and other federal sites to increase entrance and other fees. The parks were authorized to keep 80 percent of the fees collected in the park to address the backlog of projects. In 2006, money generated through the program in Grand Teton National Park will be used for:

- On-going trail rehabilitation projects.
- Rehabilitation and improvements to wastewater treatment facilities in Colter Bay, Beaver Creek, and Flagg Ranch.
- Resurfacing roads in the north district of the park, including roads between Colter Bay and the south entrance of Yellowstone, and the Pacific Creek Road.
- Replacement panels for interpretive exhibits.

Thank you for supporting the protection of America's national parks.

Fee Schedule for Grand Teton National Park

Grand Teton National History Association

Grand Teton Natural History Association was established in 1957 as the park’s primary partner to increase public understanding, appreciation, and enjoyment of Grand Teton National Park and the Greater Yellowstone area. Since that time, the Association has been aiding the interpretive, educational, and research programs of Grand Teton National Park.

The Association has grown to operate interpretive and educational bookstores in five outlets in Grand Teton National Park and the John D. Rockefeller, Jr. Memorial Parkway, and several outlets in Bridger-Teton National Forest, Caribou-Targhee National Forest, and National Elk Refuge information facilities. When you make a purchase at an Association bookstore, profits are returned to the park in the form of donations to support park programs. Your purchase also supports the publication of this newspaper, books, and the free educational handouts available at visitor centers and entrance stations.

Be sure to check out the on-line bookstore at www.grandtetonpark.org for all your trip-planning needs and complete the coupon below to become a member.

The Great Teton National Park Foundation was established in 1997 as the only private, nonprofit organization dedicated exclusively to raising money for projects that protect, preserve, and enhance Grand Teton National Park. The foundation receives no government support and relies solely on the generous contributions of private individuals, foundations, and corporations. Philanthropy in the cause of national parks is not new. The John D. Rockefeller, Jr. Memorial Parkway reminds us that we have the Rockefeller family to thank for a generous 32,000-acre land donation that led to today’s Grand Teton National Park.

A major fundraising effort is underway to build the new Grand Teton Discovery and Visitor Center at Moose that will replace the woefully small visitor center in use since 1966. Schematic design for the new facility has been completed and planning for construction is underway. The Grand Teton Discovery and Visitor Center will offer unparalleled opportunities for information, orientation, and education about Grand Teton National Park and the Greater Yellowstone Ecosystem.

If you would like to become a member of the Grand Teton National Park Foundation, or join us in the fundraising effort for the new visitor center, please fill out the coupon below and return it with your donation.

The Tetons Science Schools, founded in 1967, provide and encourage experiential education in natural sciences and ecology while fostering an appreciation for conservation ethics and practices. The secluded campus, operated in cooperation with Grand Teton National Park, is located on a historic dude ranch in the park. The Greater Yellowstone region serves as the school’s outdoor classroom and model for year-round programs that offer academic, professional, and personal benefits to students of all ages.

Summer programs include two- to five-week residential field ecology and field natural history courses for high school and junior high students, and weeklong, nonresidential programs for third through eighth grades. A one-year, masters-level graduate program in environmental education and natural science is also available. This summer the Teton Science Schools are offering 37 field seminars for adults and seven seminars for families. Workshops and seminars for teachers and other professionals are also offered.

Yes! I would like to be a part of the future of Grand Teton National Park.

The Murie Center is a nonprofit organization located on the historic Murie Ranch, home of famed conservationist Mardy Murie. The Murie Center’s mission is to develop new constituencies for wilderness, emphasizing the importance of human connections with nature. The center is funded entirely through the generosity of individuals and the commitment of foundations. Please call if you are interested in visiting the center or attending a seminar.

The AMK Research Station is a field operation of the University of Wyoming based at the historic AMK Ranch in Grand Teton National Park. The research station facilitates research in the diverse aquatic and terrestrial environments of Grand Teton and Yellowstone national parks and the Bridger-Teton and Caribou-Targhee national forests.

The Tetons Science Schools, founded in 1967, provide and encourage experiential education in natural sciences and ecology while fostering an appreciation for conservation ethics and practices. The secluded campus, operated in cooperation with Grand Teton National Park, is located on a historic dude ranch in the park. The Greater Yellowstone region serves as the school’s outdoor classroom and model for year-round programs that offer academic, professional, and personal benefits to students of all ages.

Summer programs include two- to five-week residential field ecology and field natural history courses for high school and junior high students, and weeklong, nonresidential programs for third through eighth grades. A one-year, masters-level graduate program in environmental education and natural science is also available. This summer the Teton Science Schools are offering 37 field seminars for adults and seven seminars for families. Workshops and seminars for teachers and other professionals are also offered.
Managing Fire in Grand Teton National Park

Today, federal fire management policy reflects both a commitment to public safety and an understanding that fire – a dynamic and natural process – is important to the health of the ecosystem. Grand Teton National Park’s comprehensive fire management program balances the preservation of natural and cultural resources with concerns for public health and safety by using the latest science, technology, and a highly trained workforce to evaluate conditions and consider management options. Through fire effects monitoring, vegetation mapping, and GIS data collection, fire managers have a range of modern tools to assist them in making decisions.

Some lightning-ignited fires, when they meet agency criteria, can be managed for resource benefits. These fires are carefully managed to ensure they stay within pre-determined geographic areas and weather and fire effects guidelines. This action, referred to as wildland fire use, is critical to fire-adapted plants that rely on natural fire cycles to resprout from roots or open cones for seed dispersal.

Fire can be applied to the landscape to promote natural conditions and reduce buildup of dead wood and brush. A prescribed fire targets specific objectives like restoring early successional vegetation, creating diverse habitats for plants and animals, while minimizing risks to developments and cultural resources.

Grand Teton National Park manages fire to protect human lives, personal property, and irreplaceable natural and cultural resources. Fire suppression is a key component of the fire management plan. Specific park areas are identified where fire suppression is critical to visitor and resource protection.

Park fire crews mechanically reduce vegetation in developed areas. Fuels around buildings are reduced by thinning trees and removing dead wood and brush from the forest floor. This debris, called slash, is piled and dried for at least a year, then burned during wet weather in spring or late fall. Piles of brush and logs waiting to be burned should be left undisturbed. These piles contain mostly green branches that do not make good firewood.

For more information about fire management in Grand Teton National Park, visit www.nps.gov/grte/fire/fire.htm.

Take A Look Around

Fire has been an essential and natural part of the Grand Teton National Park ecosystem for thousands of years. The presence of fire within the park is one of the significant factors contributing to the diversity of flora and fauna and overall health of the park ecosystems. As we understand fire’s necessary role in the ecosystem, we must also accept occasional busy skies and patches of blackened landscape. These short-term consequences bring with them healthy changes that sustain the area’s natural ecological balance.

Many opportunities exist in the park to view changes over time after a fire. The park staff invites you to view the different stages of revegetation and explore the diverse fire-adapted vegetation unique to this landscape.

Though charred trees or shrubs may no longer be visible in areas that have burned, a noticeable change in the height, density, or type of vegetation can be a clue that fire was present.

Teton Science Schools

A prescribed fire was completed west of the Teton Science Schools in 2001. The fire has increased the amount of native grasses and forbs in the area and provides important habitat and forage for a number of species.

North Jenny Lake

The lightning-caused Alder Fire was managed for resource benefits for several weeks in September 1999 before strong winds caused it to grow rapidly, and the fire was suppressed. Four years later, the area is now rich in grasses, and many lodgepole pine seedlings are established in the open spaces.

Blacktail Butte

In 1998, Grand Teton National Park conducted a prescribed fire on the south end of Blacktail Butte in order to benefit vegetation and wildlife habitat. The change in height and density of the sagebrush can be noted from the highway. Elk, moose, and sage grouse are frequently seen feeding in the area. Further south of the prescribed fire site is the area that burned by a lightning-ignited fire in 2003. Here, grasses and forbs are returning to the area.

Antelope flats

A lightning strike on the sagebrush flats near Mormon Row in 1994 has allowed grasses and wildflowers to again populate the area. Even ten years later, bison, pronghorn, and elk are still drawn to this part of the valley floor. Near the fire’s northeast end, a large area of aspen trees has vigorously resprouted.

Beaver Creek

Stimulated by a 1985 fire in mixed conifers, the area near Taggart Lake is now rich in young lodgepole pines, aspen trees, and snowbrush. The Taggart Lake Trail winds through stands of young lodgepole pine.

Waterfalls Canyon

This fire, along the west shore of Jackson Lake, burned in 1974. Only a few burned trees remain standing. Thirty years later, many shrubs and trees are well established. In 2000, two separate wildland fires naturally burned into the 1974 fire area and fire behavior moderated, aiding control efforts.

Please do your part to prevent human-caused fires:

- Build campfires only in designated areas, monitor them, and make sure they are properly extinguished.
- Smoke safely. Grind out cigarettes, cigars, or pipe tobacco, then properly dispose of them. Ashtrays should be used while smokers are in a vehicle and should never be emptied on the ground.
- Do not use fireworks or other pyrotechnic devices. They are prohibited at all times within the park.
- Obey posted restrictions. Restrictions may change during dry summer conditions.

Fire can be an effective disturbance that rejuvenates vegetation and is critical in maintaining the natural sequence of plant communities known as succession. During a fire, competing trees are removed, allowing new seedlings to thrive.
Yellowstone National Park

All opening and closing dates and hours of operation are subject to change due to weather and other variables. Check at park entrance stations and visitor centers for updated information.

Yellowstone Roads

**SPRING 2006 OPENING SCHEDULE**

Spring weather is unpredictable; roads may be closed temporarily by snow or other weather conditions. Snow tires or chains may be required. Weather and snow conditions permitting, tentative road opening dates for automobiles are:

- April 21: Mammoth to Old Faithful, Madison Junction to West Entrance, Norris Junction to Canyon
- April 21: West Thumb to Old Faithful, Tower Junction to Tower Fall
- May 12: Lake to South Entrance
- May 26: Beartooth Highway, Tower Fall to Chittenden Road

**CONSTRUCTION**

- Eleanor Lake to the East Entrance will be open 8 a.m.-8 p.m. with half hour delays; closed nightly 8 p.m.-8 a.m. daily.
- Beartooth Highway (Us 224): Half hour delays but no closures

**AUTUMN 2006 CLOSING SCHEDULE**

The only park road that remains open to wheeled vehicles all winter is the road from Gardiner, MT at the North Park Entrance to Silver Gate and Cooke City near the Northeast Park Entrance. All other park roads closed at 8 a.m. on November 6. All opening and closing dates and hours of operation listed are subject to change due to weather and other variables. Check at park entrance stations and visitor centers for updated information.

**Visitor Services**

All dates are subject to change at any time.

**ACCOMMODATIONS**

Old Faithful Inn
Old Faithful Snow Lodge............May 6 – Oct 23
Old Faithful Lodge.................May 5 – Sept 17
Grant Village..........................May 6 – Oct 1
Lake Yellowstone Hotel.............May 19 – Oct 10

Mammoth Hot Springs Hotel......May 12 – Oct 9
Mammoth Hot Springs Resort......May 27 – Oct 23
Mammoth Hotel......................May 12 – Oct 9

**RESTAURANTS, GENERAL STORES AND SERVICE STATIONS**

The following locations have restaurants or cafeterias, general stores and service stations:

- Old Faithful, Canyon, Grant Village, Lake Tower, Roosevelt, Mammoth Hot Springs, Fishing Bridge.

**PUBLIC SHOWERS**

Showers are available to the public (fee charged) at Old Faithful Lodge, Grant Village Campground, Fishing Bridge RV Park, Canyon Campground and Mammoth Hot Springs Hotel during the summer season.

**VISITOR CENTERS AND MUSEUMS**

Information, publications, exhibits/videos, and ranger programs are available. For details visit www.nps.gov/yell or visit travelyellowstone.com.

**Camping in Yellowstone**

**FIRST-COME, FIRST-SERVED CAMP SITES**

There are eleven campgrounds and one RV park in Yellowstone National Park. The National Park Service operates seven campgrounds: Mammoth, Tower Fall, Indian Creek, Pebble Creek, Lewis Lake, Norris, and Slough Creek Campgrounds. Sites at these seven campgrounds are available on a first-come, first-served basis.

**RESERVABLE CAMP SITES**

Reservations for campgrounds at Canyon, Grant Village, Bridge Bay and Madison campgrounds and Fishing Bridge RV Park may be made by contacting (307) 344-7381. Fishing Bridge RV Park is the only campground with water, sewage, and electrical hookups, is for hard-sided vehicles only, no tents or tent trailers. Please make your reservations early and/or plan on securing your campsite as early in the day as possible. Campgrounds may fill early in the day, especially during July and August. Camping or overnight parking vehicle in pullouts, parking areas, picnics areas or any place other than a designated campground is prohibited; there are no overflow camping facilities. All camping is limited to 14 days between July 1 and September 4 and to 30 days during the rest of the year, except at Fishing Bridge RV Park (no limit). Check out time for all campgrounds is a 10 a.m.

**GROUP CAMPING**

Group camping areas are available for large organized groups with a designated leader such as youth groups, etc. Fees range from $4-$9 per night depending on the size of the group. Advance reservations are required and can be made year-round by writing to Xanterra Parks & Resorts, P.O. Box 86, Yellowstone Park, Wyoming 82126 or by calling (307) 344-5437.
Road Improvements will take place in Grand Teton and Yellowstone national parks throughout the 2006 season. For the most up-to-date information about road conditions in Grand Teton National Park call (307) 739-3614 or visit www.nps.gov/grte. For information about Yellowstone roads call (307) 344-2117 or visit www.nps.gov/yell.

State law requires motorists in Wyoming to move over and slow down when passing stopped emergency vehicles with flashing lights. The law aims to reduce the danger of these vehicles getting hit by passing vehicles. In the last five years, stopped Wyoming Highway Patrol cars were struck on 27 different occasions.

Under the law, motorists on Wyoming interstates must move over to the travel lane farthest away from a stopped emergency vehicle before they pass. On two-lane highways, passing motorists must slow to 20 mph below the speed limit. These actions are required unless a law enforcement officer otherwise directs motorists. Violations can result in fines of up to $200, jail terms of up to 20 days, or both.

Recycling containers are located at visitor centers, stores, lodges, and in campgrounds. Items collected include aluminum and tin cans, glass and plastic bottles as well as small propane fuel cylinders. Batteries can also be recycled at many stores. Additional items may be recycled in select areas, check at park visitor centers for more information.
