Welcome to Grand Teton National Park

Few landscapes in the world are as striking and memorable as that of Grand Teton National Park. The Teton Range, the central feature and focus of the park, draws the eyes for miles, captivating park visitors and local residents alike. For generations, the Teton's have touched all who have witnessed their beauty.

Rising abruptly from the valley floor, the Teton's offer a testament to the power and complexity of nature. The mountains, valleys, lakes, rivers, and skies are home to diverse and abundant plants and animals. People have been living in the shadow of the Teton Range for almost 11,000 years. The human history of this area is extensive, beginning with American Indian prehistoric life, to the early Euro-American explorers, and the more relatively recent frontier settlement, which left more than 300 historic structures.

This spectacular mountain range and the desire to protect it resulted in the establishment of Grand Teton National Park in 1929. Over time, through the vision and generous philanthropy of John D. Rockefeller, Jr., additional lands were added, creating the present-day park. This area continues to be protected through the combined efforts of the National Park Service, the local community, and Greater Yellowstone Ecosystem partners. Grand Teton National Park is a dynamic example of people from all walks of life working together to protect a mountain range and its surrounding landscape of natural and human communities.

Grand Teton National Park is truly a special and unique place. With thoughtful use and careful management, it can remain so for generations to come. As with other sites in the National Park System, Grand Teton preserves a piece of the natural and cultural heritage of America for the benefit and enjoyment of future generations.

While you are here, take a moment to put your cares aside, stroll through a grassy meadow, hike a park trail, sit on a quiet lakeshore, and lose yourself to the power of this place. We hope you will be refreshed and restored during your visit, and stay connected to this magnificent landscape long after you have returned home.

Caring for the American Legacy

Grand Teton National Park is one of nearly 400 park sites administered by the National Park Service (NPS). The NPS preserves the natural and cultural resources and values of the National Park System for the enjoyment, education, and inspiration of this and future generations. The NPS also cooperates with partners to extend the benefits of natural and cultural resource conservation and outdoor recreation throughout this country and the world.

On August 25, 1916, President Woodrow Wilson signed the act creating the National Park Service, a new federal bureau in the Department of the Interior responsible for protecting the 40 national parks and monuments then in existence, as well as those yet to be established.

The Organic Act of August 25, 1916, states that: “The Service thus established shall promote and regulate the use of Federal areas known as national parks, monuments and reservations – by such means and measures as conform to the fundamental purpose of the said parks, monuments and reservations, which purpose is to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.”

The National Park Service strives to meet those original goals, while filling many other roles as well: guardian of diverse cultural and recreational resources; environmental advocate; world leader in environmental stewardship; and pioneer in the drive to protect America's open space.

Please join us in protecting Grand Teton National Park by following park regulations and watching out for your own safety and the safety of others. Enjoy your visit.
DATES OF OPERATION SUBJECT TO CHANGE.

2006 Winter Activities Update

SNOWMOBILING
For information about winter use in Grand Teton National Park please stop by a visitor center to speak with a ranger or visit the park’s website at http://www.nps.gov/grte/summer/winter.htm. For detailed information on winter use in Yellowstone, call (307) 344-7381, or visit the park’s official website at www.nps.gov/yell.

SKIING AND SNOWSHOEING
From November 1 to May 1, the Teton Park Road is open for non-motorized use only from the Taggart Lake Trailhead, Wilson Road, park at the Granite Canyon Trailhead. Parking is not available on the north end of this unpaved roadway.

SNOWSHOERS – PLEASE REMEMBER TO WALK NEXT TO SKI TRAILS, NOT ON THEM.

RANGER-LED SNOWSHOE WALKS
Rangers provide guided snowshoe walks from the Moose Visitor Center when snow conditions permit, usually late December to mid-March. Call the Moose Visitor Center at (307) 739-3399 to make reservations. Snowshoes are provided during this free activity.

PROTECT WILDLIFE
While enjoying winter activities you can expect to see bison, moose, elk, coyotes, bald eagles, and other wildlife. Please be aware that although wildlife have adapted to the cold, the rigors of winter still pose enormous challenges. Certain areas of the park are closed during winter in order to provide critical winter range and relieve stress on the animals.

Winter closures remain in effect on the Snake River floodplain, the Upland area, Willow Flats, Kelly Hill, and Static Peak. Closures for the protection of bighorn sheep include Prospectors Mountain and Mount Hunt including peaks 10,688, 10,905, and 10,945 feet; all areas above 9,900 feet (3,000 m) and south-facing slopes on Mount Hunt above 8,910 feet (2,680 m); Banana Couloir is open. See the map on page 8 for more detailed information or stop at the visitor center and talk to a ranger.

As You Drive, Keep Them Alive!
Annual Impacts of Vehicle Collisions with Wildlife:
- Personal property damage in excess of $155,000
- Death of approximately 100 large animals

Slow Down
Save Park Wildlife
Stay Alert
Know Before You Go

SAFETY

- Protect yourself. Know your equipment and your capabilities and limitations.
- Never ski, snowshoe, or snowmobile alone. Let someone who remains behind know your planned destination, route, and expected time of return.
- Hypothermia is a major cause of human fatality in mountain country. When the temperature drops within the core of the body, the brain fails to function properly. Carry extra clothing and wear in time to prevent hypothermia. Never leave a member of your party alone. If someone you are with begins to act or talk strangely, make him or her put on more clothing and drink warm liquids. Study first aid for hypothermia before your trip.
- Be prepared for sudden changes in the weather. Snow and weather conditions vary considerably from day to day. Check conditions before you venture out.
- Be alert for avalanche hazards, especially in mountain canyons and along ridge tops. Check with park rangers about current and forecasted avalanche hazard conditions.

SNOWMOBILING

Please check at the Moose Visitor Center or at the Flagg Ranch Information Station for current information on winter use before operating a snowmobile in Grand Teton National Park or the John D. Rockefeller, Jr. Memorial Parkway. For a brochure on snowmobiling in the park and parkway, go to http://www.nps.gov/grte/trip/winter.htm.

FIREARMS

All firearms, including state-permitted concealed weapons, are prohibited in the park and parkway – except when actively pursuing game during legal hunting seasons. If you are hunting, the Wildlife Service will provide instruction and assistance in safe and ethical game methods. Your firearm must be stored in your vehicle when the weapon is cased, broken down, or rendered inoperable.

FISHING

Fishing conforms to National Park Service and Wyoming regulations. A Wyoming fishing license is required for fishing in the park and parkway. Jackson Lake is open to fishing year-round except during the spawn from October 1 – November 1. Jenny, Leigh, Phelps, and Two Ocean lakes are open year-round.

The Snake River is open November 1 – March 31 for catch and release only trout fishing, from April 1 – October 3, trout creel limits apply. From December 15 – March 31 the Snake River floodplain is closed to all entry (including fishing) from Moran to Menors Ferry near Moose to protect wildlife. Obtain fishing regulations at the Moose Visitor Center. Be careful when wearing waders in or near swift water.

PETS

During the winter, pets are not allowed off plowed roadways or parking areas, except the unplowed portions of the Teton Park and Moose-Wilson roads. Restrain pets on a leash no longer than six feet at all times. Keep pets within 50 feet of roadways, pets are not allowed on trails or in the backcountry, in boats on the Snake River, in boats on lakes other than Jackson Lake, or in visitor centers. Pet owners are required to clean up after their animals.

FLOATING THE SNAKE RIVER

The Snake River from Moran Junction to Menors Ferry is closed to floating from December 15 – March 31. Only hand-propelled rafts, canoes, dories, and kayaks are allowed on the Snake River within the park and parkway. Register non-motorized vessels (fee charged) at the Moose Visitor Center permits desk. Check the launch site bulletin boards for current river conditions. On the surface, the Snake may not seem very powerful, but only experienced floaters should attempt this swift, cold river.

BOATING

Motor boats are allowed only on Jackson, Jenny and Phelps Lakes, there is no public access to Phelps Lake. Human-powered vessels are permitted on Jackson, Jenny, Phelps, Emma Matilda, Two Ocean, Taggart, Bradley, Bearpaw, Leigh, and String Lakes. A boat permit is required. Obtain permits and boat regulations at the Moose Visitor Center.

CLIMBING AND BACKPACKING

Permits are required for overnight backcountry trips and may be obtained at the Moose Visitor Center. Only experienced mountaineers with ice axes and other essential equipment should travel on steep snow slopes. Weather and avalanche hazard forecasts are available at the Moose Visitor Center.

WILDLIFE

Keep a respectful distance from all animals to avoid disturbing their natural routines. Stay at least 100 feet away from large animals. Large animals are quick, powerful, and unpredictable. Getting too close can result in serious injury. Take special care to avoid encounters with bears and to help maintain their natural fear of humans.

Stay out of closed areas to protect wintering wildlife (see winter map on page 8 for closures). Do not approach wildlife to obtain photographs. Animals use roads as travel corridors. Do not chase or herd animals with your vehicle; stop your vehicle and wait until they leave the roadway.

Park regulations prohibit the feeding and harassment of wildlife. Many small animals can carry diseases and should never be touched or handled. Their natural diet assures their health and survival.

Fattening Up For Hibernation

Black and grizzly bears live throughout the park and may be active at any time of the day or night.

During fall, black and grizzly bears engage in a feeding frenzy as they fatten up in preparation for hibernation. Bears may remain active through early December and emerge from hibernation in late March. These guidelines are for your protection and for the preservation of bears, one of the true symbols of wild country.

A FED BEAR IS A DEAD BEAR

Careless food storage or feeding spells death for bears. Allowing a bear to obtain human food, even once, often results in aggressive behavior. The bear then presents a threat to human safety and must be removed or destroyed. Do not allow bears or other wildlife to obtain human food.

AVOID ENCOUNTERS

Make bears aware of your presence and avoid surprising them by making noise. Be alert and look for signs of bears in the snow when skiing or snowshoeing. If you encounter a bear, do not run. Running may elicit attacks from otherwise non-aggressive bears and they can travel over 35 miles per hour. If the bear is unaware of you, detour quickly and quietly away. If the bear is aware of you but has not acted aggressively, back away slowly, talking in an even tone while waving your arms.

AGGRESSIVE BEARS

If a bear approaches or charges you, do not run. Do not drop your pack; it may protect your body if attacked. Bears often bluff charge, stopping before contact. Bear experts generally recommend standing still until the bear stops, then backing away slowly. Climbing trees is no protection from black bears and may not help with grizzlies either.
Where to Look For Wildlife
Always Keep a Safe Distance When Viewing Wildlife

Winter

SAGEBRUSH FLATS AROUND BLACKTAIL BUTTE
Near Moose. In winters with low snow accumulation, moose search for bitterbrush, a preferred food that grows with sagebrush in this area.

BUFFALO FORK MEADOWS
South of Moran Junction. Extensive willow meadows attract numerous moose and ground squirrels to provide forage for herds of bison and elk.

GROS VENTRE ROAD
East of the park boundary. Bighorn sheep forage on westwind slopes, south-facing slopes near Slide Lake.

CAUTION
Winter places enormous stress on wildlife. Observe animals from a distance. If you cause an animal to move, you are too close. Unnecessary movement burns precious body fat needed to survive through winter and into spring. Park regulations prohibit wildlife harassment. See page 8 for areas closed in winter to protect wildlife.

Spring and Fall

SAGEBRUSH FLATS AROUND BLACKTAIL BUTTE
East of Moose. Look for grazing bison and pronghorn, especially where grasses have grown thick after dense sagebrush stands were naturally removed by lightning caused fires – the 1994 Row Fire and 2003 Blacktail Fire.

Elk Ecology and Management

Elk residing in Grand Teton and the John D. Rockefeller, Jr. Memorial Parkway are part of the large Jackson Hole elk herd, which consists of approximately 12,000 elk. Management of this herd, including elk within the park and parkway, involves an authorized reduction program in the form of an annual hunt on park lands. The recommended population is 11,000 elk.

POPULATION REGULATION
Female elk are able to begin breeding when they are 1½ years old, but most start breeding at 2½ years of age. Females usually breed every year and have one calf per year until they die, although about 40 percent of juveniles do not survive their first year. Life expectancy for female elk averages 12 years, but some may live into their twenties. Elk have a high reproduction potential. A 10-year-old female may account for five additional living descendants, which is a five-fold increase in the population.

Winter mortality, disease, and predation contribute to elk population reduction, as does hunting. Available natural winter range is limited due to human development. The National Elk Refuge was established to protect land for winter range and can support up to 5,000 elk. In recent years about 12,000 elk have wintered on and near the refuge. About 90 percent of the Jackson Hole elk herd winters on the refuge and on three state-operated feed grounds. Some elk winter singly or in small groups scattered throughout Jackson Hole.

SAWMILL PONDS
Southwest of Moose on the Moose-Wilson Road. At dusk, elk emerge from conifer forests along the hillsides west of Sawmill Ponds. Moose sometimes browse on shrubs at the water’s edge. Puddle ducks feed in the ponds.

TIMBERED ISLAND
Southeast of Jenny Lake. Elk venture from the security of this forested island surrounded by sagebrush flats to eat grasses and other herbaceous plants. Pronghorn, the fastest land mammals in North America, spend the summer browsing on sagebrush and raising their young fawns before they migrate to winter ranges south and east of the park.

JACKSON LAKE DAM
North of Signal Mountain. Canada geese, American white pelicans, a myriad of duck species, and other water birds concentrate on either side of the dam. Occasionally peregrine falcons strafe resting ducks, while bald eagles and ospreys search for fish.

WILLOW FLATS

OXBOW BEND
West of Moran Junction. Trumpeter swans, American white pelicans, Canada geese, and a variety of ducks gather on this quiet river channel seasonally. Coyotes search the nearby meadows for small rodents. Moose browse willows growing at the water's edge.

Hiking SAFELY
Hiking is not recommended in those parts of Grand Teton National Park and the Rockefeller Parkway that are open to legal hunting. Most of the park’s hiking trails are located in areas that are not open to hunting. Check at the Moose Visitor Center (open daily 8 a.m. to 5 p.m.) for recommended hiking trails and other details.
Reading the Landscape

The Teton Range dominates the skyline of Grand Teton National Park, drawing the attention of all who pass through Jackson Hole. The geologic events that created the dramatic scenery of Jackson Hole indirectly account for the distribution and abundance of wildlife and plants found here. Herbivores—plant-eating animals like moose, mule deer, and elk— inhabit areas where their food sources exist. Carnivores—meat-eating animals such as bears, coyotes, and weasels—follow the herbivores they prey upon.

The Teton's owe their existence to movement along a fault located on the eastern frapbrane of the range. Starting about 13 million years ago, movement along this fault, caused by massive earthquakes, occurred every several thousand years or so. The mountain block uplifted along the west side of the fault, while the valley block dropped down on the east side of the fault. Today, the mountains rise more than a mile above Jackson Hole, with a total displacement of 30,000 feet.

As recently as 12-14,000 years ago, small mountain glaciers flowed from high elevation cirques and gouged out U-shaped canyons. Mountain glaciers spilled from the canyons to the valley floor, forming basins now filled by Leigh, Jenny, Bradley, Taggart, and Phelps lakes. Ridges of glacial debris, called moraines, surround these lakes and mark the edge of the glaciers' flow.

While small glaciers flowed within the Teton Range, an icefield covered much of what is now Yellowstone National Park. Beginning 50,000-25,000 years ago, lobes from this icefield flowed south, gouging out the depression that Jackson Lake fills today, and carrying debris as far as Snake River.

Overlook (eight miles north of Moose on Highway 287/191). Today, more support forests of lodgepole pine and other conifers. Elk and black bears seek refuge and shade in morainal forests and graze in nearby meadows during cooler parts of the day.

The southern part of Jackson Hole contains dry, poorly developed, rocky soils. As the climate warmed, glacial ice melted and broke through the moraines, flowing south through the valley and carrying away soil. Sagebrush, grasses, and wildflowers adapted to thrive in this rocky, dry landscape. Some mammals and birds favor the sagebrush flats, bison graze on grasses there, and pronghorns eat sagebrush itself. Sage grouse, large chicken-like birds, eat sagebrush leaves.

For the past 10,000 years or so, the Snake River has cut through glacial moraines to flow through the southern end of Jackson Hole. Old river terraces paralleling today's Snake River indicate that it once carried much more water. Cottonwood and spruce forests grew along the Snake River. Beavers occasionally dam side channels of the Snake River, establishing ponds that Canada geese and ducks use for nesting and feeding. Moose and beavers eat willows that flourish in wetlands along the river. Willows and other wetland plants provide cover and nest sites for a multitude of songbirds.

As you explore Grand Teton National Park, read its landscape. Note the work of glaciers on the mountains and canyons, and the old river terraces carved by the Snake River. Watch for the wildlife that provides clues to the ancient processes that formed and shaped this area.

Surviving Winter

Like humans, wild animals have three main methods for adjusting to winter—they can leave by migrating, they can avoid it by hibernating, or they can live with it by confronting and adjusting to severe weather conditions.

Migration is a tactic that many animals use. More than 150 species of birds nest in the park and parkway. Most of these birds leave northwestern Wyoming before winter sets in and return in spring. American white pelicans spend winters on either coast of Mexico. Immature bald eagles head west to coastal Oregon and northern California.

Many songbirds, from swallows to warblers fly to western Mexico for the winter. And many songbirds fly to the tip of South America.

Morphological adaptations are related to the way an animal works. Adding body fat to hibernation is a physiological adaptation. Moose have unsaturated fats in their bodies, fats that remain stable in very cold temperatures. Without these fats, their hooves would become brittle and crack. Some insects produce glycerol, a form of sugar that resists freezing. On cold nights, chickadees enter a controlled hypothermia, lowering their body temperature to save fat that would have been burned to maintain their normal high body temperature.

Wolves, coyotes, and waterfowl have a built-in feature that allows them to walk through snow and stand on ice without losing much body heat. The arteries carrying warm blood from the center of their body out to their limbs run next to the veins carrying cooled blood from their limbs back to the heart. Heat is exchanged as the warm blood becomes cooler and the cool blood becomes warmer. This “counter-current cooling system” results in the temperature of a limb being much cooler than the body and saves significant energy.
Entrance Fees 2006

All Americans support national parks through tax dollars. Congress allocates some of those tax dollars to each park area. However, costs for achieving National Park Service goals in Grand Teton and other national parks have greatly increased in recent years. Operational funding has not kept pace with escalating needs. Unfortunately, funding available through the appropriation process is sufficient only to conduct the yearly operation of the park. Money is not available for major maintenance projects involving roads, trails, facilities, and infrastructure. In 1997, Congress authorized the Recreational Fee Demonstration Program, which allowed selected national parks – including Grand Teton and Yellowstone national parks – and other federal sites to increase entrance and other fees. The parks were authorized to keep 80% of the fees collected in the park to address the backlog of projects. In 2006, money generated through the program in Grand Teton National Park will be used for:

- On-going trail rehabilitation projects.
- Rehabilitation and improvements to wastewater treatment facilities in Colter Bay, Beaver Creek, and Flagg Ranch.
- Resurfacing roads in the north district of the park, including roads between Colter Bay and the south entrance of Yellowstone, and the Pacific Creek road.
- Replacement panels for interpretive exhibits.

Thank you for supporting the protection of America's national parks.

Fee Schedule for Grand Teton National Park

<table>
<thead>
<tr>
<th>Fee Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Winter Entrance Fee</strong></td>
<td>$5 per vehicle for 1-day pass to Grand Teton National Park only.</td>
</tr>
<tr>
<td></td>
<td>$10 per hiker, skier or biker for 7-day pass to both Grand Teton and Yellowstone national parks.</td>
</tr>
<tr>
<td><strong>Individuals Planning to Snowmobile</strong></td>
<td>(Good for both Grand Teton and Yellowstone national parks)</td>
</tr>
<tr>
<td></td>
<td>$15 per snowmobile for a one-day pass / $20 per snowmobile for a seven-day pass.</td>
</tr>
<tr>
<td><strong>Individuals Planning to Ride a Snowcoach into Yellowstone</strong></td>
<td>$10 per person for a one-day pass / $15 per person for a seven-day pass.</td>
</tr>
</tbody>
</table>

For detailed information about snowmobiling reservations and fees in Yellowstone National Park visit www.TravelYellowstone.com or call (307) 344-7311.

**Golden Eagle Passport $65**

- Allows entrance to most national park areas and some other federal fee areas for 12 months from purchase, non-transferable.

**National Parks Pass $50**

- Allows entrance to most national park areas for 12 months from purchase, non-transferable.

**Parks Specific Pass $40**

- Allows entrance to Grand Teton and Yellowstone national parks for 12 months from purchase, non-transferable.

**Golden Age Passport $10 (one-time fee)**

- Allows lifetime entrance to all National Park System areas to American citizens 62 years old or older, non-transferable.

**Golden Access Passport - Free**

- Allows lifetime entrance to all National Park System areas to American citizens who can provide proof of permanent disability, non-transferable.

**We invite you to become a annual member-at-large entitled to a 15% discount on purchases at all GTNHA visitor center outlets, as well as on catalog and website orders. Many cooperating association stores nationwide offer reciprocal discounts. I would like to become a:***

- **$25 Individual Annual Member with discount privileges**
- **$50 Associate Annual Member with discount privileges and commemorative Grand Teton canvas bookbag**

**Grand Teton National Park**

The Grand Teton National Park Foundation was established in 1997 as the only private, nonprofit organization dedicated exclusively to raising money for projects that protect, preserve, and enhance Grand Teton National Park. The foundation receives no government support and relies solely on the generous contributions of private individuals, foundations, and corporations. Philanthropy in the cause of national parks is not new. The John D. Rockefeller, Jr. Memorial Parkway reminds us that we have the Rockefeller family to thank for a generous 32,000-acre land donation that led to today’s Grand Teton National Park.

A major fundraising effort is underway to build the new Grand Teton Discovery and Visitor Center at Moose that will replace the woefully small visitor center in use since 1967. Schematic design for the new facility has been completed and planning for construction is underway. The Grand Teton Discovery and Visitor Center will offer unparalleled opportunities for information, orientation, and education about Grand Teton National Park and the Greater Yellowstone Ecosystem.

If you would like to become a member of the Grand Teton National Park Foundation, or join us in the fundraising effort for the new visitor center, please fill out the coupon below and return it with your donation.

**Teton Science Schools**

The Teton Science Schools, founded in 1967, provide and encourage experiential education in natural sciences and ecology while fostering an appreciation for conservation ethics and practices. The secluded campus, operated in cooperation with Grand Teton National Park, is located on a historic dude ranch in the park. The Greater Yellowstone region serves as the school’s outdoor classroom and model for year-round programs that offer academic, professional, and personal benefits to students of all ages.

Summer programs include two- to five-week residential field ecology and field natural history courses for high school and junior high students, and weeklong, nonresidential programs for third through eighth grades. A one-year, masters-level graduate program in environmental education and natural science is also available. This summer the Teton Science Schools are offering 17 field seminars for adults and seven seminars for families.

Workshops and seminars for teachers and other professionals are also offered.

**The Murie Center**

The Murie Center is a nonprofit organization located on the historic Murie Ranch, home of famed conservationist Marcy Murie. The Murie Center’s mission is to develop new constituencies for wilderness, emphasizing the importance of human connections with nature. The center is funded entirely through the generosity of individuals and the commitment of foundations. Please call if you are interested in visiting the center or attending a seminar.

**University of Wyoming**

The AMK Research Station is a field operation of the University of Wyoming based at the historic AMK Ranch in Grand Teton National Park. The research station facilitates research in the diverse aquatic and terrestrial environments of Grand Teton and Yellowstone national parks and the Bridger-Teton and Caribou-Targhee national forests.

**The Murie Center**

The Murie Center is a nonprofit organization located on the historic Murie Ranch, home of famed conservationist Marcy Murie. The Murie Center’s mission is to develop new constituencies for wilderness, emphasizing the importance of human connections with nature. The center is funded entirely through the generosity of individuals and the commitment of foundations. Please call if you are interested in visiting the center or attending a seminar.

**University of Wyoming**

The AMK Research Station is a field operation of the University of Wyoming based at the historic AMK Ranch in Grand Teton National Park. The research station facilitates research in the diverse aquatic and terrestrial environments of Grand Teton and Yellowstone national parks and the Bridger-Teton and Caribou-Targhee national forests.

**Yes! I would like to be a part of the future of Grand Teton National Park.**

Yellowstone Roads

WINTER TRAVEL
Weather permitting, Yellowstone will open for oversnow vehicle travel in mid-December and close in sections beginning in March. The only park road that remains open to wheeled vehicles all winter is the road from Gardiner, Montana at the north entrance to Cooke City, Montana near the northeast entrance. Snow tires and/or chains may be required. Travel east of Cooke City, Montana is not possible during the winter season.

TENTATIVE SPRING 2006 OPENING SCHEDULE
Spring weather is unpredictable; roads may be closed temporarily by snow or other weather conditions. Snow tires or chains may be required. Weather and snow conditions permitting, tentative road opening dates for automobiles are:

April 21 Mammoth to Old Faithful, Madison Junction to West Entrance
April 21 Norris Junction to Canyon
May 5 Canyon to Lake, Lake to East Entrance
May 12 Lake to South Entrance, West Thumb to Old Faithful, Tower to Tower Fall
May 26 Beartooth Highway

Closed for construction: Dunraven Pass, Chittenden Road south to Canyon.

Spring Services

Dates subject to change. Call Xanterra Parks & Resorts at (307) 344-7311 for details.

FOOD SERVICE, STORES, AND GASOLINE
Yellowstone General Stores (groceries, souvenirs, light meals) and Yellowstone Park Service Stations generally open the same time or earlier as lodging in each area.

2006 OPENING DATES
All dates are tentative, no dates are confirmed as of printing.

CAMPGROUNDS
Mammoth .................. open year-round
Madison .................. open in early May
Bridge Bay .......... open by late May
Canyon ............... open by early June
Fishing Bridge .................. open by late May
Norris .............. open by late May
Slough Creek .......... open by late May
Tower Fall ................. open by late May
Indian Creek .................. open in June
Pebble Creek ................. open in June
