sweet, but cactus flowers are bright! Because they outshine everything around them, cacti have some of the prettiest flowers you could imagine.

Flowering costs plants energy, so you might wonder why would a plant that is as hard-pressed for resources as a cactus squander them on such an extravagant display? The way cacti flower actually saves them energy in the end. Many flower for only one day, and some for only a few hours. To compensate for this narrow window of opportunity and guarantee pollination, cacti produce intensely colored flowers to advertise their nectar rewards to insects.

Catching cacti in flower is one of the pleasures of visiting these parks in the spring and summer. There are over twenty varieties of cacti to be found in each. Many can be seen along Walnut Canyon Drive at Carlsbad Caverns National Park or on the nature trail by the visitor center. At Guadalupe Mountains National Park, the area around the Pine Springs Visitor Center, a hike into McKinnick Canyon or the nature trail outside of the canyon offer the best chance to see these plants in bloom. For those with vehicles that have 4x4, high ground clearance, a drive to the Williams Ranch will find more species richness because of the warmer temperatures that occur on the western and lower elevations of the park. Keys to the gates are available at the Pine Springs Visitor Center.

Cacti have evolved to survive the meanest of circumstances. Yet, these plants are vulnerable to new pressures. Collecting plants for the plant trade and habitat destruction have proven to be some of the most significant threats. Guadalupe Mountains and Carlsbad Caverns National Parks preserve habitat for cacti that occur nowhere else in the world and guarantee pollination, cacti produce intensely colored flowers to advertise their nectar rewards to insects. Cacti have evolved to survive the meanest of circumstances. Yet, these plants are vulnerable to new pressures. Collecting plants for the plant trade and habitat destruction have proven to be some of the most significant threats. Guadalupe Mountains and Carlsbad Caverns National Parks preserve habitat for cacti that occur nowhere else in the world and offer the public a chance to see them in their natural glory. The cacti of the Chihuahuan Desert are colorful characters, and they are more than just tough. They are beautiful and crucial components of a fragile environment.

As you travel and spend time in the area, please remember to keep safety in mind. Deer and other wildlife are plentiful—enjoy watching wildlife, but remember they often move across roads, especially in the evenings; be vigilant while driving during twilight hours. Hikers should be prepared for rapidly changing weather conditions. Hikers can become dehydrated in our dry climate, so carry plenty of water (one gallon per person per day is recommended). Always check trail conditions and weather forecasts with a ranger before venturing into the backcountry.

We are wholeheartedly committed to our mission of preserving and providing for the enjoyment of our nation's most outstanding treasures. We wish you a rewarding experience in every way.

Sincerely,
Douglas S. Neighbor
Superintendent
Carlsbad Caverns National Park

Guadalupe Mountains National Park has over 80 miles of hiking trails to explore, ranging from wheelchair accessible paths to strenuous mountain hikes, including an 8.4 mile roundtrip hike to Texas' highest mountain, Guadalupe Peak (8751', 2667m).

Our park staff are here to help make your visit a truly memorable event and will be happy to help you plan your visit to areas within and without the designated wilderness. Guided tours at Carlsbad Caverns can enrich your park experience. These tours offer a variety of caving experiences, from easy lantern tours to challenging trips involving crawling and squeezing through tight passages.

By Michael Haynie
Spring and summer in Guadalupe Mountains and Carlsbad Caverns National Parks bring welcomed seasonal changes...warmer temperatures, migratory birds, much needed rain, and splashes of colors in a variety of flowering plants. Some of the most intense colors are to be found in the flowers of one of the toughest groups of plants around...the cacti.

Everything that lives has to fight for survival, including plants. Cacti are some of the best-equipped plants for dealing with hot and dry conditions. Because they lack leaves and have sharp spines, many people think of cacti as “mean-looking.” Really, they’re just surviving. Not having leaves keeps them in their natural glory. The cacti of the Chihuahuan Desert are colorful characters, and they are more than just tough. They are beautiful and crucial components of a fragile environment.

Hiking and backpacking aren’t the only ways to enjoy the backcountry. We can offer you a variety of caving experiences, from easy lantern tours to challenging trips involving crawling and squeezing through tight passages.

Beautiful & Tough as Nails: Cacti Add a Surprising Burst of Color

Carlsbad Caverns National Park
Welcome to Guadalupe Mountains National Park.

Guadalupe Mountains National Park is close to the Central Time Zone, your phone will display the wrong time unless you set it to Mountain Time.

Both parks are in the Mountain Time Zone.

Because Guadalupe Mountains National Park is close to the Central Time Zone, your phone will display the wrong time unless you set it to Mountain Time.

Traveling with a Pet?

On a warm day the temperature inside a car can kill a pet. Do not leave your pets unattended.

At Carlsbad Caverns National Park, pets are allowed only on all paved roads, pullouts, and parking areas, along Walnut Canyon Desert Drive (Loop Road), on the paved Nature trail, and at Rattlesnake Springs picnic area. Pets must be kept on a leash at all times. Pets are not permitted in the cave or at the bat flight programs. However, service animals are allowed. During the day, your pet may be cared for at the concessions kernel for a $10 fee. Call 975-785-428 for details. A citation will be issued if animals are left in vehicles when ambient air temperatures will exceed 70°F Fahrenheit (21° Celsius) or higher.

At Guadalupe Mountains National Park, pets are allowed only on the Pinney Trail, while on leash, but are not allowed on other trails, in the backcountry, in buildings, or at evening programs. Service animals are allowed. Both pets and service animals are permitted in the Pine Springs and Dog Canyon campgrounds. In any national park, your pet must be physically restrained at all times.

Volunteerism Makes a Difference

We would like to extend our sincere gratitude to the dedicated effort and talent that volunteers have brought to Carlsbad Caverns and Guadalupe Mountains National Parks. Volunteers play a vital role in fulfilling our mission of preserving our natural and cultural heritage and sharing that heritage with the visiting public. Volunteers do everything from staffing the information desk, roving interpretation, patrolling surface and cave trails, to trail maintenance, research, cave restoration, and more.

To become a Volunteer-In-Park (VIP) visit www.volunteer.gov or contact:

Carlsbad Caverns National Park
Jo Ann Garcia, Volunteers-In-Park Coordinator
575-234-1385

Guadalupe Mountains National Park
Brian Schwieger, Volunteers-In-Park Coordinator
915-828-3251 ext. 2311

Volunteers do everything from staffing the information desk, roving interpretation, patrolling surface and cave trails, to trail maintenance, research, cave restoration, and more.

Senior Ranger programs are a new development, currently available at limited locations, aimed at an audience who enjoys a challenge and wants to use an activity book to learn about the park and help plan their visit. Senior Ranger books are available at the Pine Springs Visitor Center, Dog Canyon Contact Station. Children who complete four activities earn a badge and certificate, while those who do six, earn a patch, in addition to the badge and certificate. There is no charge for participation in the program. Junior Paleontologist, Wilderness Explorer, and Night Sky Explorer Activity Books are also available. Participants will earn a badge (Jr. Paleontologist) or patch (Wilderness Explorer, Night Sky Explorer) upon completion.

At Guadalupe Mountains, children work through a separate activity booklet and visit points of interest within the park. The booklet accommodates families of varying travel plans. Many of the activities can be completed at the Pine Springs Visitor Center or Dog Canyon Contact Station. Children who complete four activities earn a badge and certificate, while those who do six, earn a patch, in addition to the badge and certificate.

The National Park Service also offers an online WebRanger program for those who are unable to visit a national park, featuring activities about sites found across the nation. The activities illustrate principles in natural science and American history in new ways. To learn more, visit www.nps.gov/webrangers.

Western National Parks Association

As a nonprofit education partner of the National Park Service, WNPA supports 71 national park partners across the West, developing products, services, and programs that enrich the visitor experience.

In partnership with the National Park Service since 1958, WNPA advances education, interpretation, research, and community engagement to ensure national parks are increasingly valued by all.

Junior and Senior Ranger Programs

Many National Parks across America offer a Junior Ranger program for children to encourage interest in their national parks and to promote a sense of stewardship and ownership for these special places that they come to visit. This self-paced educational program allows children to earn a patch and/or badge and/or certificate upon completion of required activities that teach them about park resources. Appropriate activities are included in the Junior Ranger booklet, typically for pre-kindergarten through upper elementary-aged children.

At Carlsbad Caverns, the Junior Ranger program offers activities that teach children about the resources both above ground and below the surface (including plant and animal life of the desert, cave features, and history of the park). Younger children have opportunities to color and draw, find objects on a visual scavenger hunt, use their senses to experience their surroundings, and complete games. Older children will sequence events, complete word searches, and write stories and poems. Each activity in the booklet is an optional activity depending on interest and age-level. The Junior Ranger booklet is available at the visitor center information desk. Children of all ages may participate and earn a badge. The program is free.

At Guadalupe Mountains, children work through a separate activity booklet and visit points of interest within the park. The booklet accommodates families of varying travel plans. Many of the activities can be completed at the Pine Springs Visitor Center or Dog Canyon Contact Station. Children who complete four activities earn a badge and certificate, while those who do six, earn a patch, in addition to the badge and certificate. There is no charge for participation in the program. Junior Paleontologist, Wilderness Explorer, and Night Sky Explorer Activity Books are also available. Participants will earn a badge (Jr. Paleontologist) or patch (Wilderness Explorer, Night Sky Explorer) upon completion.

The National Park Service also offers an online WebRanger program for those who are unable to visit a national park, featuring activities about sites found across the nation. The activities illustrate principles in natural science and American history in new ways. To learn more, visit www.nps.gov/webrangers.

What Time is It?

MANY NATIONAL PARKS ACROSS AMERICA OFFER A JUNIOR RANGER PROGRAM FOR CHILDREN TO ENCOURAGE INTEREST IN THEIR NATIONAL PARKS AND TO PROMOTE A SENSE OF STEWARDSHIP AND OWNERSHIP FOR THESE SPECIAL PLACES THAT THEY COME TO VISIT. THIS SELF-PACED EDUCATIONAL PROGRAM ALLOWS CHILDREN TO EARN A PATCH AND/OR BADGE AND/OR CERTIFICATE UPON COMPLETION OF REQUIRED ACTIVITIES THAT TEACH THEM ABOUT PARK RESOURCES. APPROPRIATE ACTIVITIES ARE INCLUDED IN THE JUNIOR RANGER BOOKLET, TYPICALLY FOR PRE-KINDERGARTEN THROUGH UPPER ELEMENTARY-AGED CHILDREN.
Deadly Disease Continues to Kill Bats

by Dale Pate

Bats are important for ecosystems across the country and the world. They are excellent pollinators and eat millions of tons of insects nightly. Some of these insects are pests of food crops. A study completed in the 1990’s on the Brazilian (Mexican) Free-tailed bats from Carlsbad Cavern shows that 30 percent of these insects devoured by these bats are crop pests taken along the farmlands of the nearby Pecos River. Bats are important.

Unfortunately, beginning in the winter of 2006-2007 in caves near Albany, New York, a new and very deadly disease began to decimate bats that hibernate. Bat deaths were immediately associated with a white fungus growing around noses, ears, and on wing membranes. This condition was later named “White-nose Syndrome” (WNS). Since 2006, over five million bats have been killed by this disease and as of this summer, WNS has been detected in nine species of bats that hibernate. Death rates of various colonies have been from 90 percent to 100 percent of all bats in that particular colony. An additional concern is that WNS is spreading rapidly. It is now found in caves and mines in 32 states. There are lots of unknowns concerning WNS. At this time, it does not appear to be affecting summer bat colonies such as Brazilian Free-tailed bats for which Carlsbad Cavern is famous. We must all be vigilant.

While it is known that transmission of the fungus is mostly from bat-to-bat, it may also be possible for humans to transmit fungus spores on clothing, gear, shoes, or skin. In an effort to slow down the spread of fungus and give bat scientists more time to look for a solution to this serious problem, Carlsbad Caverns National Park is asking visitors to care in the park or the area to be aware of this problem and to help minimize the potential spread of this deadly disease.

Everyone can help in the following ways:

1. If you have been in a cave or mine that is known to harbor WNS, or if you have been in a cave or mine within a state known to have WNS, please do not bring any of the potentially contaminated items (clothing, gear, shoes) used during that visit into Carlsbad Cavern or other caves.

2. States known to have WNS include: AL, AR, CT, DE, GA, IA, IL, IN, KY, MA, ME, MD, ML, MN, MO, NE, NH, NJ, NY, NC, OH, OK, PA, RI, SC, TN, TX, VA, VT, WA, WI, and WV. Provinces in Canada known to have WNS include: New Brunswick, Nova Scotia, Ontario, Prince Edward Island, and Quebec.

If you are taking one of the ranger-guided off-trail trips offered by Carlsbad Caverns National Park, please use the gear furnished by the park on those tours. Also, clean your shoes and other clothing before entering the cave.

By Michael Haynie

“Pack it in, Pack it out.” Visit any national park and you are likely to hear or see this phrase, and fortunately, the vast majority of visitors take it to heart. They know that there are no trash cans along the trail, so they are prepared to carry out whatever they brought with them on their hikes. Yet, how many times have you hiked somewhere beautiful and wild, only to find that someone before you did not share the same values?

Cigarette butts, empty plastic bottles, candy wrappers, fruit peels... these are the kind of things that may have been left by only a few people, but they have wide-ranging and lasting effects on the many, and pose a threat to wildlife. It’s not only parks that are threatened by litter, but places where we live and work are too. How to deal with the problem can be a challenge. In a recent development, eco artists around the world are responding with some innovative and creative ways to help.

Eco art is a branch of environmental art in which artists explore people’s relationship to nature, and bring awareness to conservation issues. Eco artist Mariah Reading served as a volunteer during the summer of 2010. During that time she collected trash from within the park and along the highway to create art, transforming trash into treasure.

For “Devil’s Boot”, she collected a discarded boot that she found along the highway. She was immediately struck by how the high sides and back curve of the boot, with the tongue tucked between the sides, resembled a peak between canyon walls. It brought to her mind one of her favorite places in the park, the Hiker’s Staircase on the Devil’s Hall Trail.

She then hiked to the site to take a photo for reference. She worked on the piece in the studio and the field, and as part of the project, she took the work back to the original source of inspiration to line up the artwork imagery to the natural scene and document it with a photo. She donated the artwork to Guadalupe Mountains National Park, and it is now on display at the Pine Springs Visitor Center.

Mariah has created many works in various parks. To see galleries of these, visit her blog at www.mariahreadingart.com and on Instagram (@mariahreading). Eco artists are drawing attention to how our modern lifestyle is affecting the planet, and they are contributing to alleviating the problems posed by discarded materials in personally expressive ways.

By Michael Medrano

In May, 2007 a partnership consisting of federal land agencies and local community organizations in Carlsbad, NM centered the designation of the Guadalupe Ridge Trail (GRT). Organizations involved in the effort include: the National Park Service (NPS), the U.S. Forest Service (USFS), the Bureau of Land Management (BLM), the Carlsbad Early College High School (CECHS), and the Carlsbad Chamber of Commerce. The GRT runs from White’s City, through Carlsbad Caverns National Park, BLM land, the Lincoln National Forest, and Guadalupe Mountains National Park terminating at Guadalupe Peak. At approximately 100 miles long, the trail is being touted as an extreme challenge even for experienced backpackers.

In February, after meeting with Principal Eric Spencer, Carlsbad Caverns National Park, and the Lincoln National Forest, Guadalupe Mountains National Park staff turned to the CECHS for help with the GRT’s marketing and field mapping. In turn, CECHS students learned real-world advertising, marketing, and land management principles. Students from Gavin Mack’s Social Studies class produced marketing logos and business plans for startup businesses that could be affiliated with the new trail. These students developed businesses that could accommodate the needs of hikers, providing such necessities as shuttle services, outfitting, food and water delivery, clothing accessories, and even pet services.

For the class mapping project, Hannah Vanscotte’s science students were responsible for documenting trail and resource conditions on three segments of the GRT with Global Positioning System (GPS). The students searched for plant and animal species of concern (rare/threatened species as well as invasive species), infrastructure (trail intersections, signage, water bars, stairs), archaeological resources, water sources, human impacts (graffiti) and hazardous or potentially hazardous trail conditions (erosion). The tasks were designed to strengthen not only the students’ GPS, field documentation, and observation skills, but also to expose the students to the challenges facing land managers who manage trails and facilities for the American public. The students spent a combined total of over 1100 hours working on GRT issues and resources. The students very quickly gained a new appreciation for resource conservation, visitor management, and business development.

The spatial data and attributes generated by the students were assembled into a map suitable for public presentation utilizing geographic mapping software called ArcGIS. Attribute data was made available to the respective land management agencies for planning purposes, and the same data helped the social studies students with their proposed business models. The students presented the results of their work to representatives of the federal agencies as well as the general public at the dedication of the GRT. All the students did a fantastic job of presenting their findings and interacting with visitors and dignitaries in a professional manner.

The students of the Early College High School are a group of highly motivated and intelligent young people. Hopefully some of those students, engaged by their experience on the GRT, will turn their career pursuits toward entrepreneurial business and land management or even careers with public lands such as the National Park Service, U.S. Forest Service, and BLM.
**Hiker Safety & Wildlife**

**Mountain Lions**

With their large size and very long tails, mountain lions are unmistakable. Adult males may be more than 8 feet in length and weigh an average of 150 pounds. Adult females may be up to 7 feet long and weigh an average of 90 pounds. Their tracks show 4 toes with 3 distinct lobes present at the base of the pad, which is generally greater than 1.5 inches wide. Claw marks are usually not visible since their claws are retractable.

Mountain lions take their prey, usually deer, by ambush. After spotting prey, a lion stalks using available cover, then attacks with a rush, often from behind. They usually kill with a powerful bite below the base of the skull, breaking the neck, then drag the carcass to a sheltered spot beneath a tree or overhang to feed on it. Often they cover the carcass with dirt or leaves and may return to feed on it over the course of a few days.

Although no one has had a physical encounter with a mountain lion at Guadalupe Mountains National Park, sightings have become more frequent in the last few years. Lions have increasingly shown more curiosity about people and less fear. Even with this increased lion activity, your chance of seeing one of these elusive creatures is extremely low. A few simple precautions may reduce the risk of a dangerous encounter.

**First aid for a snakebite:**

- Get the victim away from the snake. Rattlesnakes strike across a distance equal to half their body length and can bite more than once. Do not attempt to capture or kill the snake.
- Remove constrictive jewelry such as rings and watches.
- Suction with a venom extractor is only extremely low. A few simple precautions may reduce the risk of a dangerous encounter.

**Mountain Lions**

- Do not approach a lion, especially one that is feeding or with kittens. Most mountain lions will try to avoid confrontation. Give them a way to escape.
- Stay calm, speak calmly yet firmly. Move slowly. Avoid prolonged direct eye contact.
- Face the lion and stand upright. Do all you can to appear larger. Raise your arms, or open your jacket.
- Protect small children by picking them up so they won’t panic and run.
- Back away slowly, if you can do it safely. Do not run! Running may stimulate a lion’s instinct to chase and attack.
- If the lion behaves aggressively, throw stones, branches or whatever you can get your hands on without coughing down or turning your back. Wave your arms slowly and speak firmly. What you want to do is convince the lion that you are not prey and that you may in fact be a danger to the lion.
- Fight back if a lion attacks you. People have fought back successfully with rocks, sticks, jackets, and their bare hands. Protect your head and neck with your arms. Remain standing or try to get back up.
- Please report all mountain lion sightings to a ranger.

**When you hike in mountain lion country:**

Travel in groups. Lions may key in on easy prey, like small children. Make sure children are close to you and within your sight at all times—do not let children run ahead of adults! Talk with children about lions and teach them what to do if they meet one.

**Rattlesnakes**

Rattlesnakes are the only venomous snakes found in the Guadalupe Mountains. They are recognized by the triangular, flat head, wider than the neck, vertical, elliptical pupils, and a heat-sensitive “pit” located between the eye and the nostril. Rattles are generally present, but may be broken off.

To avoid rattlesnake bites, stay on trails where you are more easily able to see a snake. Watch where you put your hands and feet; look around before sitting down. If you see a rattlesnake, leave it alone. Alert other members of your party. Do not attempt to move it, simply walk around it and continue your hike.

**First aid for a snakebite:**

- Do not approach a snake, especially one that is feeding or with kittens. Most mountain lions will try to avoid confrontation. Give them a way to escape.
- Stay calm, speak calmly yet firmly. Move slowly. Avoid prolonged direct eye contact.
- Face the lion and stand upright. Do all you can to appear larger. Raise your arms, or open your jacket.
- Protect small children by picking them up so they won’t panic and run.
- Back away slowly, if you can do it safely. Do not run! Running may stimulate a lion’s instinct to chase and attack.
- If the lion behaves aggressively, throw stones, branches or whatever you can get your hands on without coughing down or turning your back. Wave your arms slowly and speak firmly. What you want to do is convince the lion that you are not prey and that you may in fact be a danger to the lion.
- Fight back if a lion attacks you. People have fought back successfully with rocks, sticks, jackets, and their bare hands. Protect your head and neck with your arms. Remain standing or try to get back up.
- Please report all mountain lion sightings to a ranger.

**First aid for a snakebite:**

- Get the victim away from the snake. Rattlesnakes strike across a distance equal to half their body length and can bite more than once. Do not attempt to capture or kill the snake.
- Remove constrictive jewelry such as rings and watches.
- Suction with a venom extractor is only absolutely necessary and must be started within two to three minutes. Do not attempt oral suction or incising the skin.
- Use a sling or a splint to immobilize the limb loosely; keep it below the level of the heart.
- Look for signs of envenomation: severe burning pain at the bite site; swelling starting within 5 minutes and progression up the limb (swelling may continue to advance for several hours); discoloration and blood-filled blisters developing in 6 to 48 hours; and in severe cases, nausea, vomiting, sweating, weakness, bleeding, coma, and death. In 25% of rattlesnake bites, no venom is injected.
- If there are immediate, severe symptoms, keep the victim quiet; activity increases venom absorption. Have someone contact a ranger as soon as possible to begin evacuation.
- If there is no immediate reaction, you may choose to walk slowly with the victim to the trailhead. Begin evacuation as quickly as possible; contact a ranger for assistance. If evacuation is prolonged and there are no symptoms after six to eight hours, there has probably been no envenomation. However, all bites can cause infection and should be treated by a physician.
- Transport the victim to a medical facility where antivenin is available. The closest facility to the park is Carlsbad Medical Center, at the north end of Carlsbad, New Mexico on US 285 (2430 West Pierce); driving time is 1½ hours from Pine Springs.
Hiker Safety for Different Weather Conditions

**Lightning**

Lightning may be the most awesome hazard faced by hikers. In our area, storms are common from May through September, and usually occur in the late afternoon or early evening. You can estimate the distance of a lightning strike in miles by counting the time in seconds between flash and sound and dividing by five.

The effects of being close to a lightning stroke may be minor, such as confusion, amnesia, numbness, tingling, muscle pain, temporary loss of hearing or sight, and loss of consciousness. Severe injuries include burns, paralysis, coma, and cardiac arrest. Since injuries may not be obvious initially—burns and cardiac injury may not appear until 24 hours after the lightning strike—medical observation is recommended for all lightning victims.

**Decrease your risk of injury from lightning:**

- Get an early start so that you can finish your hike before storms erupt.
- Be aware of current and predicted weather. Watch the sky for development of anvil-shaped cumulus clouds. If a storm is building, descend to lower elevations.
- If a storm occurs, seek shelter. A car or large building offers good protection.
- Tents offer no protection.
- Turn off cell phones and other electronic equipment.
- If in the open, avoid single trees.
- Avoid telephone poles, power lines, and pipelines. Discard metal hiking sticks.
- Groups should not huddle together. Scattered individuals can help—stay at least 30 feet apart.
- Be aware of current and predicted weather. Watch the sky for development of anvil-shaped cumulus clouds. If a storm is building, descend to lower elevations.
- If a storm occurs, seek shelter. A car or large building offers good protection.
- Tents offer no protection.
- Turn off cell phones and other electronic equipment.
- If in the open, avoid single trees.
- Avoid telephone poles, power lines, and pipelines. Discard metal hiking sticks.
- Groups should not huddle together. Scattered individuals can help—stay at least 30 feet apart.

**Heat**

The body balances heat loss against heat gain to keep the core body temperature within narrow limits. With strenuous exercise in hot climates, heat gain can exceed loss. Core temperatures may rise, sometimes to dangerous levels. Dehydration exacerbates heat illness.

**Heat Exhaustion** develops over hours due to water and electrolyte loss from sweating, it causes collapse or gradual exhaustion with an inability to continue to exercise. Symptoms include headache, dizziness, fatigue, nausea, vomiting, muscle cramps, rapid pulse, thirst and profuse sweating, goose-flesh, chills, and pale skin, and low blood pressure—the victim may faint.

**Heatstroke** occurs in people who undertake heavy exertion in hot climates, and results in sudden collapse with extreme elevation of body temperature, decreased mental status, and shock. It is a medical emergency that can kill, begin treatment immediately. Symptoms include headache, drowsiness, irritability, unsteadiness, confusion, convulsions, coma, a rapid pulse and low blood pressure, and either dry or sweat-moistened hot skin.

**Prevention**

Drink plenty of water when exercising in hot weather, before feeling thirsty and after feeling satisfied. Drink enough to produce clear urine regularly during the day. Eat high carbohydrate foods for energy. Avoid heavy exercise in high temperatures and high humidity. Wear light-colored clothes that fit loosely and cover all sun-exposed skin surface. Avoid alcohol and caffeine; both increase loss of fluid.

**Treatment**

- Have the victim rest in the shade.
- Remove excess clothing.
- Wet the victim to increase evaporation.
- Increase evaporation by sprinkling water on the skin and fanning vigorously.
- Use cool water bottles, hot rocks wrapped in clothing.
- Remove wet clothes and replace with dry; add layers and a wool cap to increase insulation.
- Give food and warm, sweet drinks.
- Contact a park ranger for assistance.
- For severe hypothermia, provide heat to the victim's trunk after rescue by whatever means are available—body-to-body contact, hot water bottles, chemical heating pads, hot rocks wrapped in clothing. Place the heat sources in the groin and armpits and alongside the neck. Always have clothing between a heat source and the skin to prevent burns.
- Never leave a hypothermic victim alone.
- Contact a park ranger for assistance.
PHOTOGRAPHY

Photography is permitted on most tours; however, please use proper etiquette. Warm those around you before using a flash, and do not use the rocks as your personal tripod. For safety reasons, tripods are not allowed on any guided tours. Tripods are allowed in the Big Room, Main Corridor, or Natural Entrance. Do not use the ultra-bright lights available on some cameras. Electronic devices are not allowed at the Bat Flight Program offered from mid-May through October.

ENTRANCE FEES

Visit www.nps.gov/cave for dates and times of tours, or call 575-785-2232.

- Adults—age 16 and older: $12.00
- Children—15 and younger: free
- Plus Audio Guide: $5.00

All fees and tours are subject to change.

There is no entrance fee for those who own any of the following passes (up to three individuals plus the cardholder):
- The Annual Pass, Annual Pass (Military), Senior Pass, Access Pass (all three are part of the America the Beautiful—National Parks and Federal Recreation Lands Pass), Golden Age Passport, Golden Access Passport, and Every Kid in a Park (EKP) Pass all cover the basic entrance fee. Pass holders must still obtain free entry tickets.

Entrance fee applies to self-guided tours. Guided tours require an additional fee.

Reservations

We recommend that you make reservations for guided tours at least six weeks in advance. Some tours fill quickly. Reservations are not necessary for self-guided tours. To make reservations, call the National Park Reservation System at 877-444-6777 or visit www.recreation.gov

Reserved tickets must be picked up no later than 30 minutes prior to the posted tour starting time. Tickets will not be issued if purchased within ten minutes of the start of any tour. 

No refunds for late arrivals.

Carlsbad Caverns National Park

ENFORCE ENTERANCE SELF-GUIDED ROUTE

Fee: Entrance Fee

This hike is similar to walking into a steep canyon (a descent of about 800 feet in one mile). It is recommended only for those physically fit and healthy, sturdy footwear required. Highlights include the Natural Entrance, Devil’s Spring, Whale’s Mouth, and Iceberg Rock.

BIG ROOM SELF-GUIDED ROUTE

Length: 1.25 miles, 1.5 hours

Fee: Entrance Fee

Descend by elevator to start the tour in the Underground Rest Area. The non-skid trail is paved and mostly level, although there are a couple of short, steep hills. All visitors to Carlsbad Cavern should experience this tour. Highlights include the Lion’s Tail, Hall of Giants, Bottomless Pit, and Rock of Ages. Some of this trail can be navigated by wheelchairs with assistance; the park does not provide wheelchairs. This trail can also be accessed after hiking the 1.25-mile Natural Entrance Self-Guided Route.

LOWER CANE

Fee: Entrance Fee and $20.00 Tour Ticket (Half price for children, Senior Pass, and Access Pass cardholders)

Strenuous. Initial descent is ten feet down a flowstone slope by knotted rope, then a fifty-foot descent down three sets of ladders. Bring three new AA alkaline batteries. Sturdy, closed-toed shoes or hiking boots required. Helmets and headlamps provided. Backpacks not allowed. Not recommended for anyone with a fear of enclosed spaces, heights, or darkness. Tours depart from the visitor center. Children under 12 not permitted.

SLAUGHTER CANYON CAVE

Fee: $15.00 Tour Ticket (Half price for children, Senior Pass, and Access Pass cardholders)

Strenuous. Tour meets at the visitor center. Participants will then caravan to the cave site. Participants must hike a steep, rocky, and uneven 1/2 mile trail with 500 elevation gain to the cave entrance. Bring water and sunscreen for the hike. The tour is slippy, muddy, and requires an ascent of a 15\(^\circ\) slope using a knotted rope. Must wear sturdy, closed-toed hiking boots or shoes. Bring three AA batteries. Helmets and headlamps are provided. Children under eight years old not permitted. Carry water—weather may be very hot in summer and very cold in winter. Stay on the trail and wear sturdy hiking shoes.

SURFACE ACTIVITIES SERVICES

Facilities include a visitor center, exhibits, bookstore, restaurant, gift shop and kennel service.

INFORMATION & EXHIBITS

Elevation 4,408 feet. The visitor center is open daily 8:00 a.m. to 5:00 p.m. Closed Thanksgiving, December 25, and January 1. Last ticket sales at 4:30 p.m.

SCENIC DRIVE

A one-hour drive through the Chihuahuan Desert, this 9.5-mile gravel road is suitable for high clearance vehicles. Brochures are available at the visitor center information desk. The scenic drive is open 1/2 hour before sunrise and closes 1/2 hour after sunset. These hours are subject to change.

Rattlesnake Springs

This historic oasis includes a picnic area, shade trees, restrooms and excellent bird-watching located 4.5 miles south of White’s City on Highway 62/180, then 2.5 miles west on County Road 48. Day use only.

HIKING & CAMPING

The park’s wilderness offers day hikes and backcountry camping (permit required). Rangers at the visitor center can provide free permits, trail and weather information, and backcountry camping tips. The bookstore sells topographic maps, which are considered essential for desert hiking.
King’s Palace
Paved Trail; 80 foot hill must be climbed on return trip
April 3-May 25...10:30 a.m. (Daily)
May 26-September 3...9:30, 10:30, Noon, and 1:30 (Daily)
Meet at the Underground Post Area

To protect the bats, all electronic devices like cameras, cell phones, and camcorders are prohibited at the Bat Flight Program. This rule is strictly enforced.

Batu FLIGHT PROGRAMS
(MAY-OCTOBER)
A few hundred thousand bats fly from Carlsbad Cavern each evening from late-May to late-October, when they migrate to Mexico. The ranger program generally begins each evening 30 to 60 minutes before sunset at the park amphitheater, though weather and lightning can cause cancellation of the program. Check at the visitor center for the exact time the program starts or call 575-236-1374.

Guadalupe Mountains National Park Annual Pass
Guadalupe Mountains National Park offers an annual pass for $30.00 for visitors who plan on visiting the park more than once a year, but may not visit other federal fee areas.
The pass covers entrance fees and is good for 3 individuals plus the cardholder (persons 15 years and younger are free with or without the Guadalupe Mountains NP Annual Pass). The pass is available for purchase at the park at the Pine Springs Visitor Center.

 visitor Guide 7
Guadalupe Mountains National Park

**VISITOR INFORMATION**

- **Exhibits**: Visitor Center ground floor, Mountain View Overlook, Pratt Cabin, Devil's Hall, Bear Canyon, Salt Basin Overlook.
- **Slide Program**: Mountain View Overlook.
- **Picnic Tables**: Open daily 8:00 a.m. to 6:00 p.m. Restrooms, outdoor exhibit, introductory slide program.
- **Frijole Ranch History Museum**: Information, natural history exhibits, introductory slide program.

**VISITOR SERVICES**

- **Frijole Ranch Interpretive Center**: Located 0.9 miles southwest of Carlsbad, 110 miles east of El Paso, and 65 miles north of Carlsbad on Highway 54 and Highway 62/40. Open every day except December 25. (Mountain Time Zone). Information, natural history exhibits, introductory slide program.

**Frijole Ranch Visitor Center**

- **Parking & Trailhead**
- **Elevation**: 5,730 feet.
- **Open Hours**: 8:00 a.m. to 4:30 p.m. (Mountain Time), every day except December 25. Open daily 8:00 a.m. to 6:00 p.m. (Mountain Time Zone).

**INFORMATION & EXHIBITS**

- **Pine Springs Visitor Center**
- **Elevation**: 5,685 feet.
- **Open Hours**: 8:00 a.m. to 6:00 p.m. (Mountain Time).

**NUMBER OF VISITORS**

- **In 2018**: 300,000
- **In 2019**: 200,000
- **In 2020**: 156,000

**CAMPING**

- **Camping Fee**: $5.00/person (16 & older)*
- **Parcels**: No water or charcoal fires are permitted. Camp stoves are allowed. Pack out all your trash. Pets are not allowed on park trails.

**HORSEBACK RIDING**

- **Stock Corral**: Stock corrals are available at Dog Canyon and near Frijole Ranch. Each has four pens and will accommodate a maximum of 10 animals.

**WEATHER**

- **High Temperature**: 93°F
- **Low Temperature**: 50°F
- **Average Precipitation**: 17.4 inches

**HIGHLIGHTS**

- **Hike to the “Top of Texas” at 8,520 feet**: Spectacular views from Lost Peak. Hike out of Dog Canyon on the Tejas Trail to visit the conifer forest above. Outcrop of Smith Spring. Trees include Douglas, ponderosa pines and others.
- **Devil’s Hall Hike**: Moderate. Climb out of Dog Canyon on the Tejas Trail to visit the conifer forest above. Outcrop of Smith Spring. Trees include Douglas, ponderosa pines and others.
- **McKittrick Canyon Trail**: Moderate to Strenuous. Follow an intermittent stream through the desert and canyon woodlands to the historic Pratt Cabin. A guidebook is available at the trailhead. The Grotto Picnic Area and Hunter Line Cabin are one mile beyond the Pratt Cabin. Please do not drink the water or wade in the creek. To protect this fragile environment, you are required to stay on the trail.

**OTHER POPULAR HIKES...**

- **Pine Springs Trailhead**: Devil’s Hall Trail
- **Distance**: 4.2 miles
- **Difficulty**: Moderate to Strenuous. Climb out of Dog Canyon on the Tejas Trail to visit the conifer forest above. Outcrop of Smith Spring. Trees include Douglas, ponderosa pines and others.
- **McKittrick Canyon Trail**: Moderate to Strenuous. Follow an intermittent stream through the desert and canyon woodlands to the historic Pratt Cabin. A guidebook is available at the trailhead. The Grotto Picnic Area and Hunter Line Cabin are one mile beyond the Pratt Cabin. Please do not drink the water or wade in the creek. To protect this fragile environment, you are required to stay on the trail.

**HORSEBACK RIDING**

- **Stock Corral**: Stock corrals are available at Dog Canyon and near Frijole Ranch. Each has four pens and will accommodate a maximum of 10 animals.

- **TENT CAMPING FEES**: $5.00/person (16 & older)*

- **CAMPFIRE REGULATIONS**: Campfires are allowed. Camp stoves are allowed. Pack out all your trash. Pets are not allowed on park trails.

**BACKPACKING**

- **Elevation**: 8,751 feet.
- **Distance**: 8.4 miles
- **Difficulty**: Strenuous. Approximately 3,000 feet gain elevation, steep, rocky path.

**HIKING**

- **Pinery Trailhead**: Devil’s Hall Trail
- **Distance**: 60 miles
- **Difficulty**: Easy, accessible, slight incline on return trip.

**CAMPING**

- **Water and restrooms are available, but there are no showers, RV hookups, or dump stations.**

**VISITOR CENTER**

- **Location**: Located near the Pine Springs Visitor Center. There are twenty tent and nineteen RV sites available on a first-come, first-served basis. Two group campsites are available for groups of 10-20 people. Reservations (for group sites only) can be made by phoning 950-388-3562 up to two months in advance. Campers planning on day hiking in McKittrick Canyon, to Guadalupe Peak or the Bowl will want to stay here.

**DOG CANYON CAMPGROUND**

- **Location**: Located at the end of New Mexico Highway 137, 70 miles from Carlsbad and 10 miles from Park Headquarters, at an elevation of 6,490 feet in a secluded, forested canyon on the north side of the park. The campground has nine tent and four RV campsites (including an accessible tent site). There is one group site for groups of 10-20 people. Reservations for the group site only can be made up to two months in advance by calling 575-591-2418. 24/7.$5.00/person (16 & older)*

**PINE SPRINGS CAMPGROUND**

- **Location**: Located near the Pine Springs Visitor Center. There are twenty tent and nineteen RV campsites (including an accessible tent and RV site) available on a first-come, first-served basis. Two group campsites are available for groups of 10-20 people. Reservations (for group sites only) can be made by phoning 950-388-3562 up to two months in advance. Campers planning on day hiking in McKittrick Canyon, to Guadalupe Peak or the Bowl will want to stay here.

**FRIJOLES RANCH**

- **Location**: The ranch offers exhibits describing historic and current use of the Guadalupe Mountains. Grounds include a picnic area near a spring shaded by large oak trees. Open intermittently.

**PROTECT THE PARK...**

- **Stay on trails, don’t cut across switchbacks or create new trails.**
- **Carry out all trash, including cigarette butts.**
- **Report any trail hazards to the Pine Springs Visitor Center or any park staff member.**
- **Collecting of natural, historic or prehistoric objects is prohibited.**

**HIKES**

- **McKittrick Canyon Trail**: Distance: 8.4 miles Difficulty: Strenuous. Approximately 3,000 feet gain elevation, steep, rocky path.

**WATER**

- **Carry a gallon of water per person per day.**
- **Weather**: High temperatures 93°F, low temperatures 50°F, average precipitation 17.4 inches.

**WEATHER**

- **Average Temperature (°F)**
- **Average Rainfall**

McKittrick Canyon—the most beautiful spot in Texas

McKittrick Canyon is one of the best places to witness the diversity of life found in the Guadalupe Mountains. This is an extremely scenic hike through a canyon that contains a year-round, spring-fed stream. It will introduce hikers to the extremely unique riparian woodland ecosystem. It is especially beautiful in fall when the bigtooth maples are turning various shades of red, orange, and yellow. This normally occurs mid-October to mid-November.

This is a moderate hike with minimal elevation gain. It will take from two to five hours to complete the roundtrip hike, depending on how far up the canyon you choose to go. The hike to Pratt Cabin is a 4.8 mile roundtrip that will take from two to three hours to complete. The hike to the Grotto is a 6.8 mile roundtrip that will take from four to five hours to complete.

The first mile of the hike is open desert, but further in the canyon you will see an increase in the number and type of trees...bigtooth maples, chinkapin oaks, Texas madrones, velvet ash. Some crossings of the creekbed are dry; those that are wet have stepping stones to help you across. Crossings that are wet versus dry changes from year to year and during the season. Rainfall levels are highest in the summer and lowest in the spring.

Beyond Pratt Cabin, where geologist Wallace Pratt made his summer vacation home, the trail continues through a dense riparian woodland alongside the stream that makes this canyon unique. The Grotto provides a beautiful spot to have a picnic lunch alongside the stream. Several old historic stone tables and benches make it a comfortable spot to take a rest break. Just a short walk beyond the Grotto is the historic Hunter Line Shack.

Hikers will also have the option of continuing a bit further beyond the Grotto to the Notch. Beyond the Grotto, the trail begins to climb in elevation, getting quite steep below the Notch. The Notch is approximately 1.5 miles beyond the Grotto with an additional elevation gain of 800 feet. The notch provides fantastic views of South McKittrick Canyon.
Hardscrabble in the Guadalupe Mountains
The Story of the Calumet and Texas Mining Company

By Boyd Kennedy

The grizzled mining prospect, on a quest for that one fabulous strike that will transform him from subsistence miner to man of wealth and status, is one of the many colorful characters that walk the pages of Western history. The remote recesses of the southern Guadalupe Mountains were prospected in the 1890s, and small-scale mining for valuable minerals was attempted briefly at a few locales. The Guadalupe Mountains are now known to be devoid of valuable metal and metallic ore. Some of this knowledge was gained the hard way, at much labor and expense. Such is the story of the Calumet and Texas Mining Company.

The company had been in existence for only one year when in 1902 it purchased, from a group of four miners, a mining claim known as Hardscrabble No. 1, in the Dog Canyon area of what is now Guadalupe Mountains National Park. The claim held an active mine known as the Gopher tunnel, which was probably begun around April 1900. Copper-lead ore was mined by pick and shovel and loaded by hand onto pack mules. The mules then carried the ore a mile down the mountain to a level spot, where it was hand-loaded onto wagons for the sixty-five-mile trip to Carlsbad. From there, the ore could be hauled by wagon or train to a smelter in El Paso.

When Calumet and Texas came on the scene, company officials decided to start over with a new tunnel. Using dynamite and hand tools, small work crews slowly hacked their way through solid limestone over 800 feet into the mountain. There was a camphouse for the workers about a mile away, but there was no store, no town, and no entertainment. Everything but water and firewood had to be hauled in. Frank Kindel was known as the Flying Paper Boy of the Guadalupes for his hobby of dropping newspapers from his airplane at remote ranches and hunting camps in the Guadalupe Mountains. The records of the Calumet and Texas Mining Co. reveal that Kindel had a special connection to Dog Canyon as well. It was his boyhood home for a time. On a winter day in 1928, a mining company official stopped for gas at a Texaco station in Carlsbad. When the station manager—Frank Kindel—learned of his customer’s business in the area, Kindel began reminiscing about life in the Dog Canyon mining camp as a young boy. Kindel recalled that his father worked for John H. Shary in the Long Tunnel, and his mother helped feed the miners. He fondly remembered how thrilled he was to receive an air rifle from Shary as a Christmas present.

The Flying Paper Boy

Frank Kindel was known as the Flying Paper Boy of the Guadalupes for his hobby of dropping newspapers from his airplane at remote ranches and hunting camps in the Guadalupe Mountains. The records of the Calumet and Texas Mining Co. reveal that Kindel had a special connection to Dog Canyon as well. It was his boyhood home for a time. On a winter day in 1928, a mining company official stopped for gas at a Texaco station in Carlsbad. When the station manager—Frank Kindel—learned of his customer’s business in the area, Kindel began reminiscing about life in the Dog Canyon mining camp as a young boy. Kindel recalled that his father worked for John H. Shary in the Long Tunnel, and his mother helped feed the miners. He fondly remembered how thrilled he was to receive an air rifle from Shary as a Christmas present.

Kindel was a well-known figure in Carlsbad and in the Guadalupe Mountains at the time of his death in 1964. A unique roadside memorial is located on Hwy. 151 about 8 miles north of Dog Canyon in Queen, New Mexico, near the site of his fatal plane crash.

Source: Letter from Leon H. Brown to John H. Shary, p. 4, Feb. 24, 1938. Folder 22, Box 96, John H. Shary Collection, Edinburg Campus, University Library Archives and Special Collections, University of Texas Rio Grande Valley, Edinburg, TX.

Protecting Our Night Skies

By Aaron Stover

Light pollution is defined as the introduction of artificial light, either directly or indirectly, into the natural environment. With urbanization spreading quickly across the earth, more and more of the world’s night skies are being adversely affected. As such, areas of exceptional sky quality should be preserved. Even national parks in remote regions, such as Guadalupe Mountains, are often affected by artificial light sources. The National Park Service has documented glow from surrounding cities at distances over 200 miles from national parks (NPS Natural Sounds and Night Skies Division).

Guadalupe Mountains National Park is currently taking measures to reduce its impact on the natural darkness in and around the park. Artificial light not only adversely affects one’s ability to enjoy the night sky; scientific evidence also suggests that artificial light at night has negative effects on many creatures including birds, amphibians, insects, plants, mammals (including humans), and ecosystems as a whole.

In order to be better stewards of our exceptional night skies, we have begun to convert the park’s outdoor lighting systems to be fitted with dark-sky friendly fixtures. These fixtures shield emitted light to be pointed toward the ground, reducing sky glow and glare, the two forms in which light pollution exists.

These actions are also a part of the process in applying for Guadalupe Mountains to achieve certification as a Dark Sky Park through the International Dark-Sky Association. A Dark Sky Park is “a land possessing an exceptional or distinguished quality of starry nights and a nocturnal environment that is specifically protected for its scientific, natural, educational, cultural heritage, and/or public enjoyment” (International Dark-Sky Association). Keep in mind that here at Guadalupe Mountains, half the park is dark after dark. Come between dusk and dawn and experience it for yourself.

Light only WHERE you need it: Choose locations wisely. And remember that installing an outdoor light will draw electricity for years to come, increase your utility bill, and it may not be even necessary.

Light only WHEN you need it: Use motion sensors to turn lights on and off as needed. This costs less money, improves security, and reduces light pollution. Use timers for lights that are needed only in the evening or early morning.

SHIELD lights and direct them downward: Several types of full cut-off light fixtures are now available for home, business, and municipal use. Existing lights can also be adjusted to point downward or retrofitted with simple metal skirts. Shielded fixtures allow no light to shine above the horizon.

Select lamps with WARMER COLORS: Amber-colored lights emit longer wavelengths, which gives more protection to the eyes and minimizes sky brightness; blue light bulbs are more susceptible to insects.

Use LESS light: An efficient, shielded light fixture can use a smaller wattage bulb and still be effective. Even a 25 or 40 watt incandescent bulb, or a 9 watt compact fluorescent, is enough to light a porch or driveway.

Select the most ENERGY EFFICIENT lamp and fixture: Replacing poor quality outdoor lights with modern, efficient fixtures is not only good for the environment, but also saves energy and money while improving safety and security.

Making a Difference
You, your neighbors, and your community can make a difference in conserving our heritage of starry skies. The National Park Service recommends a six-step process for evaluating outdoor lighting in parks and protected areas. This approach can also be used in communities and urban areas:

Light only WHERE you need it: Choose locations wisely. And remember that installing an outdoor light will draw electricity for years to come, increase your utility bill, and it may not be even necessary.

Light only WHEN you need it: Use motion sensors to turn lights on and off as needed. This costs less money, improves security, and reduces light pollution. Use timers for lights that are needed only in the evening or early morning.

SHIELD lights and direct them downward: Several types of full cut-off light fixtures are now available for home, business, and municipal use. Existing lights can also be adjusted to point downward or retrofitted with simple metal skirts. Shielded fixtures allow no light to shine above the horizon.

Select lamps with WARMER COLORS: Amber-colored lights emit longer wavelengths, which gives more protection to the eyes and minimizes sky brightness; blue light bulbs are more susceptible to insects.

Use LESS light: An efficient, shielded light fixture can use a smaller wattage bulb and still be effective. Even a 25 or 40 watt incandescent bulb, or a 9 watt compact fluorescent, is enough to light a porch or driveway.

Select the most ENERGY EFFICIENT lamp and fixture: Replacing poor quality outdoor lights with modern, efficient fixtures is not only good for the environment, but also saves energy and money while improving safety and security.
Wildland Caving Opportunities in the Lincoln National Forest

By Brad Bolton

DO YOU LIKE A CHALLENGE AND TO travel where you rely on your own wits and physical strength to climb and negotiate through cave passages? For folks who really enjoy "wild caving" type of trips, there are many adventures to be found in nearby Lincoln National Forest.

The Lincoln National Forest manages numerous caves, many of which are in the same mountains shared with the two national parks. While nothing can compare to Carlsbad Caverns, many Forest Service caves are spectacular, unique, and world-renowned for their formations. In addition, many caves have vertical entrances requiring rappeling and rope work to enter! New discoveries are made yearly as scientists come to the Lincoln to study the geology and biology of caves. The caves are in a completely natural setting nestled in the high mountains and deep canyons. Visiting caves in the Lincoln National Forest can be challenging and remote, requiring specialized equipment, weeks of planning, and extensive training.

Below ground, management of backcountry caves is very similar for the different agencies. That is because the same 1988 Cave Protection Act is the federal law that requires management of significant caves for all national parks and national forests. Lincoln National Forest promotes conservation by facilitating a backcountry cave permit system, and by coordinating volunteers from the National Speleological Society (NSS) who monitor the caves for research, wildlife conservation, and preventing misuse.

Imagine starting out on a caving trip to Lincoln National Forest, things can be very different. Like many national forests, primitive roads provide driving access into some very remote areas. These roads can be extremely rough, many folks opt to get out and hike along the beautiful ridgtops. Primitive camping is allowed almost everywhere and car camping is allowed within 300' of most roads. After finding the perfect campsite high in the Guadalupe Mountains, the next task is actually finding the caves themselves. There are no established trails that take visitors to wild caves, so finding the cave entrance can be an extensive search along the side of a steep canyon, with the added challenges of orientering and following maps. To help groups find caves and promote conservation, Lincoln National Forest facilitates a public trip leader program. Members of the NSS with extensive cave experience lead others to find new adventures.

If "wild caving" sounds like fun, there is an easy way to get started right where you live. There are caving clubs called "Grottos" located across the country as part of the National Speleological Society. Finding and contacting one of these Grottos is a click away at www.caves.org. There you will find a U.S. map and contact information for caving enthusiasts from across the country. The National Speleological Society is a great partner organization and NSS Grottos provide the necessary training and education needed for visiting the backcountry caves of Lincoln National Forest.

Sitting Bull Falls (Lincoln National Forest)

By Jeremy Evans

THE GUADALUPE RANGER DISTRICT, the southern-most district of the Lincoln National Forest, has many spectacular recreation opportunities. Remote, quiet and mysterious, the District beckons the visitor to explore this unique desert landscape. The Guadalupe Ranger District shares its southern boundary with two national parks: Guadalupe Mountains and Carlsbad Caverns. Hiking, camping, hunting, bird watching, and horseback riding are just some of the incredible activities that can be enjoyed on the district.

One of the recreational highlights is Sitting Bull Falls Recreation Area. It sits at the end of a long remote canyon and has a series of waterfalls (fed from springs atop the canyon) that create a large pool of water at the base of the falls, 150 feet from top to bottom. The Sitting Bull Falls Recreation Area meets ADA guidelines for accessibility and some of the features include paved sidewalks, restrooms, picnic tables, rock cabanas, fresh water, trash containers, and a viewing deck of the waterfall.

Sitting Bull Falls and the surrounding landscape are the remnants of an ancient reef known as Captain Reef. Approximately 260 million years ago, the area was on the edge of a huge inland sea. The predominant geology of the area is limestone and is full of fissures and caves that were slowly eroded by acidic water over long periods of time. Deep and rough canyons were carved by annual flooding and rains. Other geologic forces have created picturesque valleys teeming with wildlife and those forces, over time, helped create the underground water reservoirs and springs that feed into Sitting Bull Falls.

The Guadalupe Mountains sit on the northern edge of the Chiuhuahuan Desert and have a rich and diverse geologic and archaeological history. American Indians first came into the area around 10,000 years ago and the Mescalero Apache called this area their home for many, many years. Spanish explorers came to the area in the 1600s; the horses they brought proved to be very valuable to the Apache. By the mid-1800s, explorers, settlers, ranchers, businessmen, cattleman, and outlaws had migrated into the area. Because of the rough and remote terrain, the Guadalupe Mountains were settled very slowly.

In the 1950's, the Civilian Conservation Corps was assigned to the area and built impressive stone structures that still stand today as the picnic sites at Sitting Bull Falls. The uprisings ushered in a little more development: crews installed vault restrooms, added more cabanas and improved the trail to the falls. In the 1980's, a route to the top of the falls was built by the Youth Conservation Corps. Then on Easter Sunday of 2001, the Last Chance Fire burned through the area, severely damaging the picnic cabanas and destroying the trees and vegetation. Sitting Bull Falls was closed for a year while repairs were made; once reopened, the area was damaged again by a flood event in September of 2003. Another flood in 2004 delayed reconstruction efforts. Finally, by May 2007, all reconstruction and repairs were completed.

A new walkway was built, which leads to a viewing deck and a bird's-eye view of the falls. The entrance road to the well-known site was reconstructed and "re-paved" the way to a whole new experience!

It is a day-use area open from 9 - 5 daily (October to March) or 8:30 - 6 (April to September); the standard amenity fee is a bargain at $5 per vehicle. Visitors can wade in the water below the falls, hike, or picnic. The picnic sites have tables and grills, but you'll need to bring your own charcoal and be aware of any fire danger warnings. Many of the picnic sites provide overhead shelter from the sun's rays that beat down on the area most of the day. Fresh water and restroom facilities are available. There is a paved, ADA accessible path to the falls viewing area. Camping is not allowed in the falls day use area, but is allowed almost anywhere else on the Guadalupe Ranger District.

If you have questions, please visit the Guadalupe Ranger District office at 2031 Buena Vista Drive in Carlsbad or call 575-885-4181. Sitting Bull Falls is approximately 42 miles west of Carlsbad, New Mexico and can be reached by car via Highway 283 to Highway 137 and then Forest Road 276 / County Road 409. Pets on leashes are allowed.

Come and enjoy Sitting Bull Falls and the surrounding area. Take a hike on the many trails or relax and have a picnic with your family. Whatever you decide to do, your adventure to the Guadalupe Ranger District will be memorable. Don't forget to come prepared. Bring plenty of water and pay attention! Deer, javelina, mountain lions, snakes, tarantulas, rabbits, and many other animal species call the area home. If you decide to go out and explore the backcountry, please go prepared; the weather in this area can be unpredictable and so can the wildlife! Please be safe and enjoy YOUR national forest.

Located 12 miles north of Carlsbad on U.S. Highway 285, the campground has 51 RV sites with water and RV electric hookups (a few with sewer), a dump station, playground, restroom with hot showers, shelters, tables and grills. Other facilities include picnic areas with sheltered tables and grills, playground, a fishing dock, boat ramps with docks, and a visitor center.

LINCOLN NATIONAL FOREST (GUADALUPE DISTRICT)
575-889-4499
www.fs.usda.gov/lincoln/home
The forest encompasses 1,103,441 acres for hiking, caving, camping, picnicking, horseback riding, hunting and sightseeing. Maps are available at the Guadalupe Ranger District Office located at 5203 Buena Vista Drive Carlsbad, NM 88220.

BLACK RIVER RECREATION AREA
The 1,200-acre Black River Recreation Area is managed to provide low-impact recreation and environmental education opportunities while maintaining a healthy river system and riparian habitat. This oasis in the Chihuahuan Desert is home to rare species of plants, fish, and reptiles in and around the river. The area is located partially within the city limits of Carlsbad, NM. From Lea Street, go west to Standpipe Rd. Turn south and travel 3 miles to the gravel access road. Turn right and travel approximately 0.3 miles to the trailhead and parking area. There are no facilities other than the parking area and trail signs.

La Cueva Non-Motorized Trail System
The trail system covers approximately 2,200 acres and contains more than 15 miles of maintained trails. The non-motorized trails are used by mountain bikers, hikers, and equestrians. The trails wind through the rolling limestone foothills of the Guadalupe Mountains and the rugged Chihuahuan Desert environment.

Turn right and travel approximately 0.3 miles to the trailhead and parking area. There are no facilities other than the parking area and trail signs.

Five Points & Indian Vistas
Eleven miles south of State Highway 137 on Forest Route 340, an improved gravel road. A panoramic view of the desert from the top of the Guadalupe Mountains. Interpretive signs explain natural features.

GUADALUPE MOUNTAINS NATIONAL PARK
Open all year—24 hours/day. Accessible.
Fees
Day Use Only—$5.00 per vehicle
Camping—$14.00 per night ($10.00 for each additional vehicle driven into the same site)
Primitive Camping Area—$8.00 per vehicle per night.
