On January 25, 1978, Secretary of the Interior Cecil D. Andrus established a new agency, the Heritage Conservation and Recreation Service, which assumes the recreation responsibilities of the former Bureau of Outdoor Recreation and further undertakes the role of identifying and conserving the cultural and natural resources important to our nation's development.
SCROUNGING

Because of low budgets and high need, recreation departments nationwide are learning to use a unique acquisition process; it's called scrounging and benefits both givers and receivers. Now, more than ever, economic realities are forcing park and recreation agencies to make the most of available dollars, and environmental realities require that we reassess what we discard as waste. For these reasons, a scrounging program is an ideal supplement to assist in providing quality recreation opportunities.

In Milwaukee, Wisconsin, members of senior and youth programs helped scrounge arts and crafts materials. Stores donating surplus items received tax benefits and favorable publicity through advertising while contributing to the program.

The Bend Metro Parks and Recreation District in Bend, Oregon, provided facilities through their scrounging program that have now become favorites of the local townspeople. A small dory was recovered from a river bottom and tied to its new dock in the middle of a park. Imaginative future sailors are now able to take daily voyages on this mighty vessel. Additionally, a train of outmoded railroad cars was located and is being renovated to provide space for craft classes, lectures, meetings, and movies. Imagination, creativity, and a scrounging program have made valuable, popular facilities from seemingly useless items.

More than anything, scrounging is fun and has virtually unlimited possibilities. Sources and resources are innumerable. Sources can range from utility companies and government agencies to private sector and nonprofit organizations. Resources can be as diverse as old utility poles to discarded stationery from a printing shop; from freight cars to plastic hose material. The keys to a successful scrounging program lie within the people who will implement it: imagination and action. Use your imagination to create a use for even the most unusual resource. Most important, act on your creative ideas. Implement your own scrounging programs to retrieve the resources and then utilize it in your park and recreation program.

Whether your program is continuous or a one-time effort, the following techniques are applicable.

BASICS OF SCROUNGING

Scrounging requires ingenuity and creativity, but it is simple to accomplish. It generally involves the following steps:

1. Staffing
2. Locating and Soliciting
3. Accepting
4. Stockpiling
5. Recognizing

Economic realities are forcing park and recreation agencies to make the most of available dollars.
Staffing

The first resource you need to obtain is a person to take charge and direct the program. Look for someone who can't stand wasting anything, someone who has a certain expertise for recycling things, for bargain hunting, and for getting other people excited. This person may be someone on your staff, a CETA worker, perhaps a volunteer, or you may even want to consider hiring someone for the job. A prime qualification for that person is that he or she have no qualms about asking for favors.

Locating and Soliciting

After you've located your scrounger, the search can begin for needed items.

Use the yellow pages of the telephone book to assist you in locating potential materials. If possible, make a visit. If there are other scrounging programs in your community, join forces for a combined solicitation. Potential donors will appreciate the "one gift serves all" aspect of a combined appeal.

Make people aware that there is a scrounging program and that you will be able to use the articles they have to donate. It is essential to fully inform your own agency or organization in addition to potential donors.

Obtain publicity for the program through local newspapers, radio stations, agency brochures, at speaking engagements, and among friends and acquaintances. The success of solicitation can be maximized by focusing on certain types of potential resource holders. For large and/or costly donations, approach local utility companies or large private corporations and businesses. For the small but often invaluable items, print up fliers explaining your scrounging program and distribute them where numbers of people will see them—banks, schools, grocery stores, and senior citizens' centers.

Be aware of chance encounters. If you happen upon a building site littered with potentially useful supplies or come across a piece of idle equipment that could be useful, contact the owner to see if a contribution can be obtained. Do not overlook any potential sources; most people contacted have something to offer. The more contacts made, the more effective your scrouning will be.

Accepting

Even before locating potential resources and
soliciting from potential sources, you should develop a gracious acceptance policy and an efficient pick-up procedure. Arrange to have a vehicle available at all times. If there is a shortage of vehicles, contact a public agency or community organization and request its assistance in picking up donations. Many donations are made impulsively, and speed may be essential.

You will receive calls from donors offering a variety of items. Keep in mind that some people will have different ideas about the kind of material you need. If you arrive to pick up an item and find it is not suitable to your needs, experts advise that you graciously accept the donation and try your best to put it to use. Do not discourage future valuable donations by being too selective in front of the donor; next time, they may have exactly what you need.

Stockpiling

Once you begin accumulating items, you will need an area or building to store donated materials until they can be used in the development of a facility or operation of a recreation program. Don't forget that this warehouse or vacant area can be a donated resource, too!

Keep the storage area neat and orderly, especially if it is in view of the general public. Creating an eyesore in the middle of town is a sure way to lose future donations. Inventory your materials and store them in logical groupings to increase efficiency and orderliness. When a well-organized scrounging program has been in operation for a few weeks, a well-supplied stockpile area will be a great reward for the time and effort put into the program.

Your center can become a point of community interest. In San Francisco, the SCRAP organization, a well-developed scrounging program, holds classes on the use of recycled materials. The classes are very well attended, and dozens of school field trips were made to the site. People love the scrounging concept. It's economical, useful, and it's "in style"!
Recognition

The final step in an effective scrounging program is to provide suitable recognition to all donors. Elaborate ceremonies and presentations are usually not necessary; however, as a minimum, donors should receive a note of thanks for their contribution. This "thank you" should come as soon as possible after the donation is made. The goodwill this gesture creates can only provide positive interaction with the public agency, nonprofit organization, and the general public in future endeavors.

SCROUNGING FROM THE FEDS

When federal agencies have property no longer needed, they notify all agencies of their department. If these items are not in demand by their department, the property is listed as "excess" by the General Services Administration (GSA). This catalog of excess property is circulated throughout the entire federal system and is reviewed to determine if there is any federal need for the materials. If no government department can utilize the available items, they are designated as surplus property and distributed to the states which, in turn, make them available to the eligible local groups. Much of the equipment provided to public agencies through this program can easily be modified and employed in park development programs.

Be innovative in your approach.

As a minimum, donors should receive a note of thanks.

Annually, approximately $400 million worth of surplus federal property is allocated to qualifying organizations and local governments. Few restrictions are placed on the use of these purchases. These restrictions are discussed in further detail, as is the entire surplus property program, in the forthcoming HCRS publication dealing with that topic.

OTHER SCROUNGING IDEAS

Imaginative ideas for uses of scrounged materials can be found on page 6 of this booklet as well as in Paul Hogan's Playgrounds for Free, published by MIT Press, Cambridge, Massachusetts 02142. The second printing, November 1975, costs $9.95. A primary reference for uses of
junk or surplus material for development and construction of park and recreation facilities and programs is your local newspaper or favorite house and home magazine. For example, a two-page story found in *The Denver Post* told of an outstanding playground designed by the Parent-Child Center of LaSalle, Colorado. Once a weedy vacant lot, the area is now criss-crossed with a tricycle highway complete with discarded road safety signs and unused gas pumps serving as a filling station. An old bathtub was padded with carpeting scraps and is a favorite "thinking tank" for the children. Many more scrounged materials were collected and made child-proof, adding to the uniqueness of this popular playground. These inspiring articles appear in publications throughout the country and can be helpful and motivational to those persons involved in scavenging.

A successful scavenging program can be exciting, challenging, and most important, it can be budget-boosting! Have fun with it and remember these points when instigating your own program:

- Get people excited!
- Be polite and appreciative that donors are doing you a favor.
- A personal contact or visit tends to generate more willingness to donate.
- Don't refuse an item just because you don't have a specific use in mind.
- Keep the stockpiled materials neat and orderly in appearance.
- A simple "thank you" and a handshake are appreciated gestures.

Get people excited!

Here's Help In Providing Recreational/Cultural Opportunities

introducing

The HCRS Information Exchange

Here's How It Works

The HCRS Information Exchange depends on an informal network of contributors to continually expand its collection and contribute to the improved delivery of recreational/cultural services in the United States. In order to provide first class up-to-date information, we ask members to contribute materials which we will announce in Technical Assistance NOTIFICATIONS. These materials would include:

- studies
- journals
- newsletters
- handbooks
- surveys
- brochures
- reports
- films
- audio-visual aids
- publications
- program evaluations
- training manuals

Here's What You Get

You will receive our publication entitled Technical Assistance NOTIFICATIONS, which includes:

- Abstracts and Order Forms for Free HCRS materials.
- Abstracts and ordering information for materials produced by Federal, State and Local Government Agencies; private organizations, educational institutions, etc.
- A Calendar of Events listing upcoming conferences, workshops, training sessions, meetings, etc.

Here's What It Costs

A first-class postage stamp to mail-in the Membership Form below.
