ACKNOWLEDGEMENTS

Particular thanks go to Randy Biallas and Billy Garrett for pointing out the need to give special consideration to historic housing in the Director's Housing Initiative and for giving me the opportunity to do this study. Alicia Weber deserves high praise for creating a computer program which was easy to use and which correlated so well with the existing List of Classified Structures database. Many thanks go to the hundreds of employees in the field—superintendents, administrative officers and their assistants, maintenance personnel, rangers, and park historians—who responded tirelessly and with enthusiasm to my persistent requests for information. Pat Smith and Donna Compton of the WASO Housing Office cheerfully provided me with huge amounts of information on park housing. The regional cultural resource staffs proved invaluable in giving me background on the resources in their respective regions and the status of their surveys. I am indebted to all of you for your help and assistance.

EXECUTIVE SUMMARY

Purpose. This study is a result of the Housing Initiative and, in particular, Special Directive 88-3: Employee Housing—Responsibilities of Management. The study provides Housing Design and Assistance Teams (HUDATs) with:

- a brief contextual history of park housing;
- representative examples and narrative descriptions of the types and styles of historic structures that the National Park Service uses and has used as housing;
- a computerized inventory of historic and potentially historic housing with information on National Register status and List of Classified Structures status, cross-referenced to three databases including the Housing Inventory.

Summary. Approximately one-quarter of all park housing is historic or potentially historic.

The National Park Service has 1082 housing structures that are either in the National Register of Historic Places or that warrant evaluation for it. Of those historic and potentially historic structures:

51% are in or eligible for the National Register of Historic Places;
45% have never been through an official Determination of Eligibility;
4% have been determined to be ineligible (but remain on the List of Classified Structures);

and

67% are on the List of Classified Structures;
34% have not been surveyed for the List of Classified Structures.

The geographic distribution of those 1082 historic or potentially historic housing structures is as follows:

BRIEF HISTORY OF PARK HOUSING
BRIEF HISTORY OF PARK HOUSING

The National Park Service houses its employees in an enormous variety of structures. Employees live in log cabins and classic stone and shingle rustic buildings in western national parks. Stone pueblo revival buildings at Bandelier National Monument and traditional Navajo hogans at Mesa Verde National Park house others. Seasonal employees live in the guest house of a movie star's ranch at Santa Monica Mountains National Recreation Area and in floating quarters at North Cascades and Isle Royale National Parks. Some employees and their families squeeze into tiny colonial houses—among the oldest residential structures in the east—at Colonial National Historical Park. Others survive the winter drafts of rambling New England saltboxes or crowd into trailers or "temporary" buildings left over from the days of the Civilian Conservation Corps. Some are quartered in the old marine barracks at Charlestown Navy Yard or in classic rowhouses at Independence National Historical Park. Our coastal parks provide housing in old Coast Guard and Life Saving stations and in casemates and officers' quarters of historic forts. Employees live in metal quonset huts, stone or frame farmhouses, former motels and resorts, and old ranch buildings. The types of structures that the National Park Service uses as employee housing provide an astonishing cross-section of American architecture. Although many were constructed for residential purposes, some were built for industrial, military, or recreational uses.

To understand how the agency ended up with such an odd variety of housing, a quick look at the administrative history of the system is in order. In 1832, Hot Springs was set aside as a Federal Reservation to protect its healing waters. In 1864 and 1872 respectively, Yosemite and Yellowstone were set aside as parks, preserving vast expanses of western wilderness. Although the specific reasons for setting these areas aside varied, their reservation as parks brought with it the responsibility for managing the land. Early administration of these areas was haphazard, and the parks were victims of political scandal, conflicting land claims, and criminal activity.
In the late nineteenth century, the U.S. Army came in to straighten out the problems at the request of the Department of the Interior. The War Department assigned Army personnel to design a more orderly development for Hot Springs Reservation beginning in the late 1870s. In 1886, the Army took over administration of Yellowstone National Park and stayed there in an administrative capacity until 1918. After 1890, the Army entered Sequoia, General Grant, and Yosemite national parks.

When the National Park Service came into existence in 1916, the agency inherited a number of Army buildings. The greatest amount of these were Army quarters at Fort Yellowstone in Mammoth, at Yellowstone National Park. The architectural legacy that the National Park Service received there included a large number of buildings constructed to standard Army specifications. Army architecture often followed styles common throughout American architecture of the period, but the buildings had an additional practicality exhibited by simplicity and lack of ornate detailing more prevalent in the private sector.

Also, the Army often repeated house plans, particularly after 1884 when the Quartermaster General oversaw the construction of all permanent quarters. This repetition gave areas developed by the Army an architectural rhythm and unity. Many of the non-residential buildings, too, were similar to buildings at other Army posts of the period. The stable at Fort Yellowstone, for instance, was nearly identical to that at the Presidio in San Francisco, and the double officers' quarters were similar to those constructed at Fort Spokane, Washington, and Fort Lapwai, Idaho. The homogeneity of architecture on Army posts nationwide contributed to a sense of order and established respectability at that entrance to Yellowstone's vast wilderness.

Coupled with the Army's contribution to the architectural pool of buildings in national parks was the strong tradition of development in park areas nurtured by the railroads. Railroad development was the second large factor contributing to the evolution of park architecture. The Northern Pacific; the Great Northern; the Atchison, Topeka and Santa Fe; and the Union Pacific were the largest of the railroads to foster development in park areas.

---

2 Private architects such as Bernard Maybeck and William West Durant also had strong impacts on the development of architecture appropriate to National Park settings. For a broader discussion of the development of National Park architecture, see Harrison's *Architecture in the Parks*. 

---
Usually, a railroad began by providing limited accommodations in undeveloped park areas. Gradually, most realized the advantages of building unique destination resorts with noteworthy architecture. When rail passengers wrote home about their park experiences, they often commented about the fantastic hotels, curio shops, and entertainment they encountered along with the mountains, canyons, and rivers. Although the railroads built these destination resorts as part of a marketing strategy to sell more passenger tickets--where they made their most money--the overall impact on park architecture was considerable.

The biggest push started in the northern Rockies. The Northern Pacific Railroad's major architectural contribution to this period of park architecture was Old Faithful Inn at Yellowstone. The Great Northern Railway started a substantial trail system and built Swiss-chalet style hotels and backcountry chalets in Glacier National Park. To the south, the Atchison, Topeka, and Santa Fe Railway and its concessioner the Fred Harvey Company built El Tovar, Hopi House, Hermit's Rest, and other architectural masterpieces on the south rim of the Grand Canyon. Later, the Union Pacific developed Bryce, Zion, and the North Rim of the Grand Canyon with large rustic hotels and hundreds of rustic cabins for rail passengers. Along with the big hotels came housing for the workers who ran these operations.

When the National Park Service was in its infancy, then, some architectural traditions already existed in the parks. In addition to the strong influences of the Army and the railroads, however, other factors helped the agency hone its ideas about appropriate architecture and design. The National Park Service had strong lobbying assistance from the American Society of Landscape Architects and the American Civic Association. In 1918, members of those two organizations helped to form the National Park Service's first official statement of policy:

In the construction of roads, trails, buildings, and other improvements, particular attention must be devoted always to the harmonizing of these improvements with the landscape. This is a most important item in our programs of development and requires the employment of trained engineers who either possess a knowledge of landscape architecture or have a proper appreciation of the aesthetic value of park lands. All improvements will be carried out in accordance with a preconceived plan developed in special reference to the preservation of the landscape, and comprehensive plans for future development
of the national parks on an adequate scale will be prepared as funds are available for this purpose.\(^3\)

Although this policy statement set the tone for future design work, the actual implementation took many years.

During the late 1920s, an increase in appropriations for physical improvements to national parks brought with it an increase in staff to design and oversee the construction of those improvements. Under the direction of Chief Landscape Architect Thomas C. Vint, the Park Service landscape division grew from a two-person operation to a six-person operation in 1927. This was just the beginning of an enormous expansion that continued until World War II.

By the late 1920s and after years of experimentation, Vint's staff fine-tuned the architectural principles of park architecture. They concentrated on using onsite, natural materials of the same scale as the surrounding landscape. The designers worked at making the buildings look as if they were constructed by frontier craftsmen using primitive hand tools. Often these early designers looked toward the local architectural traditions of the area in which they were building and adapted those styles for use in parks. This organic approach to architecture suitable for park settings became known as rustic architecture or "parkitecture."\(^4\) It guided all park development through the Emergency Conservation Work programs of the 1930s through World War II.\(^5\)

During the 1920s and 1930s, considerable development of national park areas took place in the east as well as the west. Natural areas in the east such as Shenandoah and Great Smoky Mountains national parks tested designers' skills, but so did Colonial and Morristown national historical parks, and George Washington's Birthplace National Monument. In 1933, a huge consolidation of historic places under the jurisdiction of the National Park Service added national military parks, battlefields,

\(^4\) Park architecture of this period did not confine itself to one style. Although its practitioners referred to it as "rustic" architecture or "parkitecture," the buildings ran a gamut of styles from Colonial Revival in the east to Pueblo Revival in the southwest. Thus, the movement was not one style; rather it was a design ethic that crossed over the boundaries of various styles.

\(^5\) For further information, see the three-volume study compiled by Albert Good, Park and Recreation Structures (Washington, D.C., Government Printing Office, 1938).
cemeteries and monuments, various forts, and the Statue of Liberty.

With those properties, the National Park Service received caretaker's houses, cemetery lodges, and other types of housing primarily military in nature. As the agency continued expanding to include national seashores, it received Coast Guard buildings and resort homes. New areas added after World War II were often urban national recreation areas that brought with them additional military housing, state park housing, and more resort homes. All of these additions and expansions contributed to the architectural pool of historic park housing.

The last huge construction push that left a distinct architectural character in the National Parks was Mission 66. World War II had brought a hiatus in park development and construction, but the post-war years included tremendous increases in park visitation. To respond to the greater staffing and operational needs, Director Conrad Wirth instituted this ten-year building program. Mission 66 began in the mid-1950s, and it included a resumption of park development on a significant scale. Quarters from this period often had flat or low-pitched roofs with wide eaves and fairly good interior layouts. Their clean, simple lines and generic style rejected the rustic architectural ideals of the years prior to World War II.

Although architecture and design were on the minds of park designers starting in the earliest days of the agency, most of the efforts in the design field did not go into housing for park employees. Prior to funding levels provided in the development programs of the 1930s, many park employees lived in less than adequate housing—particularly in the large western parks. Although many received comfortable housing, tents and worn-out shacks were not uncommon for permanent employees even in parks with severe winters. Superintendents and park staffs were ingenious at piecing together whatever they could to house themselves and their newly-hired coworkers. The agency, after all, had mandates to fulfill for protecting its resources and providing for visitation. Like the Army in the west, the National Park Service put its greatest emphasis on the physical presence of its personnel. The finer points of comfort and the development of amenities came later.

Renting housing from adjacent land owners happened early in national park history. An example of this sort of arrangement appeared at Glacier National Park in 1912. There, the acting superintendent rented a small house at Belton, thirty yards from the Great Northern Railway's station. The park's caretaker wanted to establish a park registry office until his permanent quarters were built. He believed that using the former railway agent's house with its three small rooms would allow him to set up housekeeping where he could "sleep at his post and board at one of
the adjacent hotels." This type of rental arrangement was not unusual. Looking a little deeper into some other problems early park staff encountered shed additional light on other housing issues.

When considering the overall development of any national park, the planners, the superintendent, and other staff considered housing for park employees of lesser importance than most other aspects of development. Usually roads, utilities, museums, visitor centers, and visitor accommodations were high-priority items. After all, appropriations to run the National Parks during the 1920s and 1930s were gauged to visitation: the higher the visitation, the higher the appropriation. Thus, the economic survival of the national parks depended on proper development for visitor use and administration.

Another factor contributing to the lack of emphasis on housing had to do with the type of employees it recruited and hired—ones who could survive the often primitive lifestyle of the national parks. In tracing the roots of the national park ranger corps, early park service director Horace Albright noted the strong contributions that the Army made to that ranger ancestry. Among the first rangers were numerous Army veterans and civilian scouts, whose backwoods knowledge rubbed off on their followers. Albright sought men who had a passion for the outdoors, who could survive primitive and isolated conditions, who could get along with visitors and concessioners, and who could enforce the law.

As the agency grew during the 1920s and attracted single men to the idealistic, quasi-military, rugged Park Service life, it also brought in good employees who came with families. Although superintendents often preferred hiring single men, they began noticing some advantages to having married employees, and they also recognized the need for keeping those workers. As the Grand Canyon superintendent wrote to the Director of the Park Service in 1923:

Single men should unquestionably be taken care of in dormitories. We try here to get single men, but it is not always possible and in some cases, such as the blacksmith, boss carpenter, stable boss, etc., where the work is steadily in one place perhaps, and more or less

---

6 R.H. Chapman to the Secretary of the Interior, June 5, 1912, National Archives Record Group 79, Entry 6, Tray 200, Glacier Office and Residence of the Superintendent, September 6, 1911-December 23, 1912.

7 Horace Albright as told to Robert Cahn. The Birth of the National Park Service: The Founding Years, 1913-33. Chicago: Howe Brothers and the Institute of the American West, 1985, pp. 137-140.
routine in character, better and more reliable men seem to be secured among those that are married and settled down. For these we have to provide married quarters.\(^8\)

Despite the obvious prejudice of the remark, the superintendent was beginning to see one way to retain employees in isolated areas. Also, through the 1920s and 1930s, wives of park employees frequently worked as unpaid staff in national parks.\(^9\) The agency often received two employees for the price of one.

As more married people in higher-level positions filtered into the ranks of the Service, the military approach of the higher the rank (or grade), the better and larger the quarters also appeared in the National Parks. In 1922, the superintendent of Grand Canyon wrote to Daniel Hull, the Chief Landscape Engineer of the National Park Service, requesting plans for quarters for his new chief clerk (equivalent of the present-day administrative officer):

> I understand that those quarters should be suitable for a married man of his position. I can find nothing in the files, except a plan for 'bachelor quarters' . . . I am convinced that they are hardly suitable for the emergency. For a married couple I submit there should be a suitable bedroom, and considerably more closet room, besides ample provision for heating, bath, bed, and living rooms. Further I think the Chief Clerk should have individual quarters and not a portion of a duplex cottage.\(^10\)

This same type of ranking appeared in the layout of the Munson Valley headquarters district at Crater Lake National Park. There, the superintendent's residence crowned a small rise, and the remaining residences were constructed in descending order down the hillside, generally according to the occupant's position on the park staff. The superintendent's residence, of course, had the largest square footage.

Dormitories had been favored to house single permanent rangers since at least 1920 when Stephen T. Mather donated $20,000 out of his personal fortune to construct the Ranger's Club at Yosemite. Again, this harked back to the agency's strong roots in the Army.

---

\(^9\) As so many spouses continue to do today.

where single men were housed in barracks and bachelor officers' quarters. The building, constructed as an example for other park ranger dormitories, included individual sleeping rooms, dormitory spaces for seasonal employees, and common rooms that housed a library, dining area, and recreational space.

The importance of housing to employee morale was an issue early in the agency's history. The rangers were perceived as the core of the Park Service and as the torch-bearers of the agency's spirit. Keeping them and other employees content in their living situations contributed to a better National Park Service. The 1920 Annual Report for Yosemite, which discussed Mather's donation of the Ranger's Club, also remarked that not all staff housing was of high quality. The report stated: "Pride in one's surrounding and working conditions is an important factor in efficient accomplishment and it is very difficult for even the most cheerful to have that pride in work that goes with efficiency under present housing conditions of the force." ¹¹ The park managers realized the importance of housing to their staff's morale. ¹²

Often, parks took considerably more time to provide housing for employees with families than it did for single rangers. The Grand Canyon superintendent noted the need for a better dormitory structure for his men in 1923. Although he housed them in an old ranger dormitory, he requested a better building for them, but only after his married employees who lived year-round in tents received better quarters. He noted that their present dormitory was drab, but that the housing for the families took precedence:

... even if the rangers have to forego some comforts and pleasures for another year. They, at least, are comfortably and securely housed in the old dormitory during all weather conditions, though as promptly as possible they should be given a house to themselves more cheerfully and better suited to those men on whom we

¹² Eighteen years later, author Albert Good reiterated the importance of comfortable, well-maintained living quarters for park employees when he noted: "Patched-up, ramshackle living quarters can influence the standards of general park operations adversely." See Park and Recreation Structures, vol. 1, p. 73.
depend so much for the proper spirit in the entire force here.  

Other Grand Canyon correspondence of the period showed that the superintendent's other housing concerns included the need to separate permanent and seasonal staff, and the request to share quarters and dormitory plans with Glacier National Park.

Other parks had additional concerns. In December 1928, Rocky Mountain National Park's superintendent complained that many of his employees had to rent dwellings in a high-priced tourist area, and those who did live in the park had inadequate vehicle and wood storage. At the time, quarters for a permanent, married employee included a living room, kitchen, two bedrooms, and a bath. The quarters requirements were fairly standard throughout developing national parks.

Although most park employees lived in fairly humble abodes, some exceptions did exist. One notable exception was at Mesa Verde National Park. There, Superintendent Jesse Nusbaum and his wife Aileen designed their own residence. Mrs. Nusbaum did considerable research, and she based her designs on the Bureau of Ethnology's 1886-87 report on pueblo architecture by Cosmos and Viktor Mindeleff. She drew freely from the studies in that volume in her pueblo-based design. This pioneering tie to the indigenous architecture of an area became one of the tenets of the rustic design ethic of the late 1920s and 1930s. It appeared in all aspects of park development from housing to comfort stations.

Providing additional amenities to existing quarters occurred frequently. By 1928, seven years after the Nusbaums had built their Mesa Verde quarters, Jesse Nusbaum requested additional funding to construct a maid's room for his house. He also requested funding to add a new bathroom to the ranger dormitory so

14 The amount of time allotted for this study did not permit further exploration of these topics.

15 Letter, Superintendent Jesse Nusbaum to the Director, August 13, 1921, National Archives Record Group 79, Entry 6, Tray 357.

16 Letter and attachment, Assistant Director A.E. Demaray to Superintendent, Mesa Verde, November 16, 1928. National Archives Record Group 79, File 302, Mesa Verde, Appropriations-Estimates-General. Other superintendents, such as those at Glacier and Sequoia, also had maid's quarters connected with their residences.
that the rangers would no longer have to wait in line in the mornings. He wanted them to get to work on time.

Historically, park service spouses have contributed to design of and equity in park housing. Aileen Nusbaum was not the only woman to enter into the business of the design of park quarters. As an example, Chief Landscape Architect Daniel Hull noted in 1921 that his wife had gone over the plans for the interior design of the superintendent's cottage at Sequoia. As a graduate in home economics, Mrs. Hull "made a special study of small house arrangement and design." She assisted with the layout of the two-bedroom quarters. Undoubtedly she assisted with others while her husband was in that position.

Horace Albright's wife, Grace, had a very strong impact. Upon their arrival in Yellowstone National Park in 1919, this new superintendent and his wife inherited not only the Army housing, but the rigid assignment of quarters that accompanied it. Mrs. Albright noted the inequity of considering an employee's occupation on the park staff rather than the size of the employee's family in assigning quarters. Superintendent Albright quickly changed the system at that park. Remnants of the Army's system remained in other areas for decades.

Looking back at the past, then, has demonstrated several important points. First, this agency has used a variety of structures for park quarters. Through inheritance from the Army and other federal agencies, through our own design compatible with nature, and through various methods of acquisition, the National Park Service has a rich heritage of domestic architecture. Second, although some park employees lived in adequate housing historically, many suffered through years of tent or shack occupancy before receiving decent housing. Big construction pushes for park development in the late 1920s and through the 1930s greatly improved the housing situation. Mission 66 also increased the numbers of livable units and the square footage normally allowed for quarters.

Housing for park employees has never been among the highest priorities of the Service. The idealism of the agency and the need to maintain a rustic but polished image in the public's eye traditionally put funding priorities toward more publicly used buildings and facilities. Since the 1920s, however, the agency has noted the importance that quarters can have on employee morale and work productivity. Perhaps knowing what problems consistently cropped up in the past will help us with solutions in the future.

18 Albright, The Birth of the National Park Service, pp. 96-97.
The illustrations included here are not meant to be a comprehensive survey of park housing. Rather, they are representative of the types of buildings that the National Park Service has used and in many instances is using as housing. Included here are buildings constructed by the private sector, buildings constructed by the military, and buildings constructed by the National Park Service. Various types, styles, and methods of construction are represented.

While perusing these pages, the reader should consider that the significance of architecture often goes beyond the rigid limits of style and craftsmanship. Meaning in architecture deals with other questions, too. Look beyond the style of a building, and think about why the style was chosen. What does that choice of style have to do with the society that produced it? What technologies were available in the area when it was built?

For further information on American domestic architecture, the reader should consult McAlester and McAlester's A Field Guide to American Houses. For further information on specific resources in the national parks, consult the regional and park cultural resource staffs for national register nominations and contextual information.
Figure 1. The Sommerwell House (1707) at Colonial National Historical Park is one of the oldest buildings in use as a park employee residence.

Its compact scale and interior plan show strong ties to the late medieval architecture of England. Among those post-medieval features are the steeply pitched roof, the side-gabled orientation, the lack of eave overhang, and the end chimneys. Buildings of this style were often one room deep.
Figure 2. The Guerin House (1782) at Morristown National Historical Park, also an early Colonial structure, shows some Dutch influences commonly found in the region including its side-gambrelled roof and the number of stories.
Figure 3. These rowhouses (circa 1800) in Philadelphia's Independence National Historical Park have stringcourses articulating the stories and Georgian detailing around the off-center entrances. The symmetry of the fenestration evenly divides the bays and adds order and formality to the structures. Another feature common to Georgian townhouses such as these is the door surround with fanlights.
Figure 4. This New England saltbox at Minuteman National Historical Park is typical of other period structures throughout its region. The central chimney to radiate heat throughout the house, the cornice returns at the eaves, and the cornerboards that articulate the edges of the structure are all elements common to this type of Georgian architecture.
Figure 5. This building, the Pearl Guilford House (1885) at Capitol Reef National Monument, is typical of many of the old buildings that this agency acquires in rural western parks. Through the years, the building has been modified and adapted, but it remains quite serviceable as quarters for park staff. The gable-front-and-wing National type of folk house has a compound shape. It is a long-removed descendent of Greek Revival architecture.
Figure 6. California ranch houses such as this—the main house for Upper Pierce Point Ranch (1869), Point Reyes National Seashore—provide onsite quarters for park employees and also contribute to the remnants of the cultural landscape of that ranching area of Point Reyes. Again, the building has a compound shape with multiple additions typical of vernacular buildings that evolved through time.
Figure 7. The Texiera Ranch at Point Reyes National Seashore is a late-Victorian ranch house with bay windows, jig-sawn railings, and decorative porch columns. This folk-Victorian building borrowed a few architectural features, such as the bracketed eaves, from the Italianate.
Figure 8. Far less opulent quarters, such as this cabin at Deer Haven at Rocky Mountain National Park, often house seasonal employees. This National type of side-gable cottage is two rooms wide and one room deep.
Figure 9. Onahu Lodge (1939) at Rocky Mountain National Park also houses park employees. Although the former resort has been determined ineligible for the National Register of Historic Places, it is representative of the types of resort structures that the National Park Service owns. Historic log octagon structures are seen in other park areas, including Yellowstone National Park.
Figure 10. This garage/motel unit (1927) at Scotty's Castle in Death Valley National Monument was constructed as part of a large private complex at the north end of Death Valley. Later in its history, its owners converted parts of it into a motel operation to bring in money. Park employees now occupy the structure. The low-pitched roofs, slight overhang of the eave, red tile roofs, and stucco wall surfaces identify its Spanish Eclectic style.
Figure 11. The Rockefeller family constructed a series of carriage paths in Acadia National Park. Lodges and gatehouses, such as this at Jordan Pond, guarded the entrances to the paths. Eventually, the family donated all of these to the National Park Service. They are used for housing. Characteristics of this French eclectic Norman cottage are the flared eaves at the roof junction; the stone, brick, and half-timbering; and the overhang of the upper story.
Figure 12. Santa Monica Mountains National Recreation Area possesses a number of buildings connected with more recent California history— that of the movie industry. This guest house (1923) on the Peter Strauss ranch houses a seasonal employee.
Figure 13. Rows of nineteenth-century military houses such as these at Fort Yellowstone gave order and architectural rhythm to the post. The Army constructed quarters similar to these at other posts throughout the nation. A few elements of the Shingle style are present including the moderately pitched roof, the side-gabled orientation, recessed porches, hipped dormers, flared eaves, and two-room depth. These buildings are now used as park housing.
Figure 14. This double officers' quarters (1893) at Fort Yellowstone, now in use as park housing, demonstrated some of the Army's architectural philosophy. The building is taller than the enlisted men's quarters, and it contains more square footage. Its comparative size commands attention, and its symmetry reinforced the formality required in the Army's order of things. Its size is commensurate with the rank of its Fort-period occupants. The building's bare-bones architectural style includes minimal decorative detailing: chamfered posts; small brackets; cornerboards; and corniced chimneys.
Figure 15. The stone construction of this U.S. Commissioner's residence (1895), also at Fort Yellowstone, gives the impression of permanence and durability. Again, the architecture reflects the social order at the Fort. Although it has no fancy detailing, the complex roof structure and chamfered posts could come from Colonial or Greek Revival architectural traditions. The buildings is in use as park housing.
Figure 16. The Commissary Storehouse (1891) at Fort Yellowstone lacks the more elegant feel of the residences. The building's architecture makes it readily apparent that it was not originally constructed as housing, although that is the structure's present use.
Figure 17. This cemetery lodge (1894) at Custer Battlefield National Monument originally housed the caretaker for the property. The National Park system contains a number of these former lodges, most of which were acquired during the 1930s. The front-gabled orientation and segmental arches of the windows tie it to Colonial architectural traditions.
Figure 18. At Charlestown Navy Yard in Boston National Historical Park, these Captain's quarters (1833) possess a similarity in design to other period residential structures in urban park areas of the northeast. These, however, are readily identifiable as U.S. military architecture because of the uniformity, simplicity, and repetition of the design features. Simplified Georgian elements include the panelled front door, modified crown with pilasters, and the belt course around the base.
Figure 19. The former Marine Barracks (1823), also at Charlestown Navy Yard, contains a number of units to house employees. Like any urban park, Boston National Historical Park has trouble attracting seasonals and permanents because of the extremely high cost of living in that area. Providing housing in this historic structure has alleviated some of the problem.

One recent park employee and resident of this structure commented in the October 1987 Courier that his apartment in the building was not "as luxurious as it may sound. Sufficient for a family's needs, the apartment contains three bedrooms, a dining room, kitchen, living room, and two bathrooms, plus places to store the unpacked boxes from the last move. The kids have plenty of play area. But there are disadvantages, too. To live in a city, one must adapt to the noise (different from croaking ravens), the smells (different from flowering cliff rose) and the animal pests (very different from scorpions and black widows)."
Figure 20. As documented in the following photograph from Wupatki National Monument (1948), conditions for housing park employees and their families often were primitive. Similar conditions existed at Grand Canyon, Yosemite, Sequoia, and countless other areas. Housing was not a top priority of the agency, and often employees and their families were expected to maintain high morale even under these conditions.
quarters for the family of a permanent ranger

The lack of adequate housing is a serious handicap in recruiting the type of men we need in the National Park Service. Most wives will not live in the kind of quarters available. The "Log House" has been in continuous use since June, 1947.

Wyattki National Monument
Dec. 10, 1948
Figures 21 and 22. Prior to construction of the Munson Valley group at Crater Lake National Park, the superintendent had two residences: a summer residence in the park, and a winter residence in Medford, Oregon. The wood-frame park residence (following page) was reminiscent of Army construction in its lack of stylistic detailing. The Medford residence looked like a suburban residence of the period with its Tudor features including the arched entrance, steeply pitched roof, stucco-clad walls, flared eaves, and cross-gables.
Figure 23 and 24. Early residences for the rest of the park staff at Crater Lake were quite simple (see following two pages). Occupied only seasonally, the board-and-batten and log cabins were simple buildings that fulfilled their part-time, warmer weather uses.
Figure 25. During the late 1920s and early 1930s, stone cottages such as this one on the following page replaced the less durable dwellings. The buildings show characteristics of the rustic design ethic: battered masonry, board-and-batten gable-ends, and the rich textures that mimicked those of the surrounding environment.
Figure 26. At Glacier National Park, the superintendent's residence (1923) had an odd combination of logs and shingles and a lack of emphasis on horizontality. The building combined several architectural traditions without keying to any of them specifically. Transitional buildings like this one are seen commonly in historic housing in national parks.
Figure 27. The overall pattern of the first housing area at Glacier (ca. 1919) had setback and layout that harked back to the design of Army posts. The buildings, however, were spaced at greater distances. Again, note that the residences lack ornate detailing.
Figure 28. Superintendent Jesse Nusbaum and his wife Aileen relied heavily on prehistoric pueblo architecture in designing their residence (1921) at Mesa Verde National Park.
Figure 29. When additional park residences (ca. 1930) were constructed at Mesa Verde, they, too, were in the Pueblo Revival style. The adoption of individual architectural themes for specific parks was common during the late 1920s and 1930s.
Figure 30. Mesa Verde's design theme went beyond the bound of following architectural styles appropriate for the park setting. In addition, Mesa Verde was the first National Park to provide ethnic housing specifically designed for a certain population. Several traditional Navajo hogans like this one (1935) were built to house Navajo employees of the park.
Figure 31. The naturalists' residence (1930) at Fishing Bridge in Yellowstone National Park was constructed as part of a small grouping that included a museum, and amphitheater, lake overlooks, and a stone-edged parking lot. Well-planned development groups also occurred at entrance stations and headquarters areas.
Figure 32. The Superintendent's Residence (1933) at Grant Teton National Park has some of the classic elements of rustic architecture. The logs and shingles, the board-and-batten siding in the gable ends, and the steepness of the intersecting gable roofs clearly defined the building's rustic character.
Figure 33. Smaller residences, such as this one (1933) at Giant Forest in Sequoia National Park, were more of the size allotted to most park employees. Two bedrooms, a kitchen, and a living room were the standard spaces found in residences for most married park employees during the 1930s.
Figure 34. Park architecture of the 1930s often incorporated local architectural traditions. At Hawaii Volcanoes National Park, the wide eaves and low pitch of the metal roof were adopted from the local architecture. The substantial stone foundation and lower walls kept moisture away from the wood of the superstructure (1937).
Figure 35. At Zion National Park, Park Service designers looked toward Mormon architectural traditions in this Ranger Dormitory (1941). The random coursing of the ashlar masonry, the cornice returns at the eaves, and the fenestration mimicked that type of regional architecture.
Figure 36. Less glamorous quarters (1938) were at Wildrose at Death Valley National Monument. The asbestos-sided building was serviceable but lacked any distinctive architectural identity.
Figure 37. Patrol cabins such as this one at Crystal Springs in Yellowstone National Park, needed to be stout. The building's temporary occupant had to be able to secure the structure from grizzlies and squatters when he left. The structure had to withstand the harsh winter climate. And the building had to provide a safe, comfortable shelter for the patrol ranger who used it.
Figure 38. Many parks had Civilian Conservation Corps camps during the 1940s. After the CCC completed its work in a park, most often the park took over the "temporary" camp buildings and used them for housing. Areas similar to this one at Rocky Mountain existed at Sequoia, Shenandoah, and other national park areas.
Figure 39. Just prior to World War II, design of park houses was pulling out of the rustic trends. Although the double-coursing of the wood shingles and the wide boards of "rustic siding" (as they termed it) were part of that earlier era, the architectural economy of the cleaner lines was becoming evident. The lack of broad eaves and the single mass of the building gave it a modern feeling.
INVENTORY OF HISTORIC AND POTENTIALLY HISTORIC PARK HOUSING
THE INVENTORY

PURPOSE. The primary purpose of the inventory portion of this study is to provide the National Park Service with the number of historic and potentially historic structures that it uses as park housing.

METHODOLOGY. To get at those numbers, the author assembled and correlated the following lists: the housing inventory of all units built prior to 1950 (provided by the WASO Housing Office); the List of Classified Structures; a listing of all National Park System structures in or eligible for the National Register of Historic Places.

Armed with that information, the author contacted by telephone all of the parks that reported pre-1950 residences in their housing inventories to: 1) verify that the units remained in use as housing; and 2) ascertain whether any additional pre-1950 structures would be added to park housing inventories during 1990. The author worked closely with park and regional staffs in weeding out those structures that were merely old from those structures that were historic or potentially historic. Park and regional staffs also helped clarify National Register district boundaries to determine which structures belonged in historic districts.

Next, the information gathered was entered into a computer database. Date-entry categories included the following: structure number; unique LCS number; housing number; name of the structure; historic and present-day functions; National Register status; level of significance; date of placement on the National Register; National Historic Landmark status and date; and National Register reference number.

1 The author relied solely on information gleaned from park and regional staffs. Funding for the project did not permit field-checking the information in the inventory.
Most of the structures already on the List of Classified Structures (LCS) had little information on the LCS database besides structure name and number. Approximately 85% of those LCS structures used for park housing did not have "housing" listed in the function category of the LCS. This lack of adequate, extant data meant additional work.

If a structure had no LCS number, the author assigned it a unique five-digit number beginning with ZZ___. The computer program for this project was designed specifically to upload into the LCS database and update that body of information. Those structures in the inventory with ZZ___ numbers instead of the LCS unique number will not upload into the LCS database, and they are not considered LCS structures. Rather, they are structures that need to be evaluated for the LCS. However, information on LCS structures that are presently used as park housing will upload into the LCS database.

Several factors should be taken into account when reading the information presented in the following tables. First, the WASO Housing Inventory counts housing by units; and the List of Classified Structures counts housing by structures. In other words, an apartment building at Yellowstone with 20 apartments is seen in the Housing Inventory as 20 separate units. The List of Classified Structures interprets that same apartment structure as one building. Therefore, the following tables have both the structure count and the unit count. Because this study updates information on the LCS database, the only column that uses the unit count is the one labelled Total Units. Counts presented in all other columns are numbers of structures.

Another factor to keep in mind while reading the following tables is that dormitory spaces are not considered individual housing units. Although these dormitories may house a number of seasonal employees, the Housing Inventory interprets these dormitories as one unit. Also, this database does not differentiate between permanent and seasonal housing. These aspects help clarify the figures and put them in perspective.

Deciphering some of the terminology on the inventory may be slightly confusing for those unfamiliar with the List of Classified Structures format. Under the Function category, for instance, category 01A is listed "Single Dwelling (Rowhouse)." This translates as "single dwelling including rowhouse." Likewise, category 01B reads "Multiple Dwelling (Duplex)." This means "multiple dwelling including duplex." For further explanation of the List of Classified Structures terminology, the reader should consult User Manual: List of Classified Structures and Cultural Resources Management Bibliography available from the National Park Service, Park Historic Architecture Division, Washington Office.
Summary. As of this writing, the National Park Service has 5135 housing units. Of that total number:

- 31% of all park housing units were constructed prior to 1950;
- 24% of all park housing units are historic or warrant evaluation.

Out of the 1580 housing units constructed prior to 1950 that the National Park Service uses as housing, 79% or 1241 are historic or potentially historic. Those 1241 housing units amount to 1082 historic/potentially historic structures. Of those 1082 structures that are historic or potentially historic:

- 51% (550 structures) are in the National Register of Historic Places or have been determined eligible.
- 45% (488 structures) have not been through an official determination of eligibility (many are in process).
- 4% (44 structures) have been determined ineligible. They are included here because they remain on the List of Classified Structures.

Of the 1082 structures that are historic or potentially historic:

- 67% (730 structures) are on the List of Classified Structures.
- 33% (352 structures) have not been surveyed for the List of Classified Structures, and they warrant evaluation.

We can infer a number of things from this information. First, a 79% chance exists that any pre-1950 housing unit in a park is historic or potentially historic. Although this number seems rather high, looking at the development history of the National Park System helps us better understand why that number is large.

Most parks underwent huge building programs during the 1920s and the 1930s. The quality of the architecture that the agency produced during that time was quite high, and the significance of that architecture has been recognized in the last decade. The overall quality of park architecture started to decline just prior to World War II.

Also, nearly all construction programs stopped during and immediately after the War. The lack of new construction meant that the total number of structures did not increase significantly between 1940 and 1950. The decline in quality, coupled with the lack of new construction, left the Service with a large number of significant structures from a short period of time. So, a park
manager can expect a high proportion of his/her pre-1950 quarters to be historic.\(^2\)

Although 51% of the structures in this inventory are officially in or eligible for the National Register, more than half of the 488 structures in the "undetermined" category are going through the National Register process at this writing. Of particular note are the National Register forms for the South Rim Historic District at Grand Canyon and various nominations at Rocky Mountain, Grand Teton, Yellowstone and Glacier national parks. When processed, these nominations will move many structures from the "undetermined" category to the National Register category.

When considered in a broader sense, the above figure seems to indicate that considerable work remains to be done throughout the National Park System in following through with the agency's responsibilities under Executive Order 11593 and Section 110 of the National Historic Preservation Act. This applies not only to structures used as housing and included in this inventory, but to all park cultural resources.

On the other hand, some of the structures presently included on the List of Classified Structures shown here in the inventory eventually may be determined ineligible. Regional and park staff might consider joining forces in compiling lists of these structures that go through the official determination of eligibility process. By having lists of all ineligible structures available, park managers, maintenance staff, planners, and other interested parties could have quick, reliable references available for their use. The lists would be especially useful in parks that have hundreds of structures. No region has a complete list of ineligible structures. Again, this applies to other structures besides those used as housing.

The remaining figures show that considerable work still needs to be done to survey and add qualifying structures to the List of Classified Structures. Most regional cultural resource staffs are forced to view this task as a low priority. Lack of specific funding for surveys, small staff, frequent emergencies, heavy workloads, collateral assignments, and the overwhelming demands of day-to-day operations contribute to this condition.

---

\(^2\) This probably will not hold true for Mission 66 structures. As they approach 50 years of age, their clean-lined generic style may be determined to possess considerably less architectural significance than the buildings and landscape features constructed during the development programs of the 1920s and 1930s. Only time, however, will give us enough historical perspective on the importance of Mission 66.
Another factor bearing on the need for additional survey work is that some of the pre-1950 structures not presently on the LCS were inventoried fifteen years ago. In the interim, additional research may have shed light on their significance, or the structures now may be among the last remaining examples of their type. Some structures needing evaluation may be recent acquisitions, and others may be approaching 50 years of age now and were bypassed in earlier survey work because of their relative youth.

Survey work is a dynamic process. The LCS and the National Register are not static. Although this agency has made great strides in including so many eligible structures on the LCS and the National Register, the work is far from completed.

Recommendations.

1. Aggressively seek funding for and continue in the inventory and evaluation process for the National Register of Historic Places. This is not a frill; it is a legal mandate.

2. Update the List of Classified Structures database. The computerized process makes the task considerably easier than it was ten years ago.

3. Compile lists of structures determined ineligible for the National Register, complete with dates of the determination.

4. Remember that there is a 79% chance that any pre-1950 structure used as housing in the national parks is historic or potentially historic.

5. Develop interpretive literature for park staff and visitors in selected areas explaining the history and significance of park historic housing. Develop structure-specific literature for the occupants of park historic housing to increase their awareness of and sensitivity toward their historic structure and to provide guidance in its daily use.
