Welcome

On behalf of the National Park Service men and women working here in southern West Virginia, I am proud to welcome you to three impressive and exciting units of your National Park System. New River Gorge National River, Gauley River National Recreation Area, and Bluestone National Scenic River offer spectacular scenery and a wealth of recreational opportunities. The diversity of natural and historical resources found in these national park areas is being preserved as part of a larger family of 391 nationally significant places which make up the National Park System.

These special places within our National Park System have become sanctuaries for national pride, a sense of place, and renewal of mind, body, and soul. As one of nearly 300 million visitors to America's national parks, we hope that you not only have a safe and enjoyable visit, but that you also take away a deeper understanding and appreciation of your role as stewards of these special places.

Please join in teaching and practicing good environmental stewardship and respect for our cultural heritage, not only when visiting the parks, but wherever you live, work, or play. Only then can we hope to ensure that these same resources that you and I enjoy today will be left unimpaired for future generations.

Welcome to New River Gorge National River.

Superintendent

Taking Part in Your Park

New River Gorge National River and the American public continue to work on revising the park's General Management Plan (GMP). The GMP will define a vision for the future of the park and will guide decisions for the next twenty years.

It has been over twenty years since the first park GMP was prepared. Visitation has increased from 231,295 in 1984 to over 1.1 million in 2006. Tourism has become a major industry and employer in the area. Over the years, land ownership within the park boundary, as well as the boundary itself, has changed. Increases in public land have allowed the park to provide new facilities, but it is now time to reassess past accomplishments as well as future needs. Concurrent with the GMP planning process, the National Park Service will prepare an Implementation Plan for the nationally significant historic resources at Nuttallburg.

Throughout 2006 and 2007, the National Park Service invited public comments about the future of their national park. According to Park Deputy Superintendent Debbie Darden, "There was a wonderfully diverse response, but some common themes did emerge. Included were the opportunities for peace and solitude, access to diverse outdoor recreation, historic resources and stories, scenic beauty, the river and clean water, education, and economic development opportunities."

A variety of management concepts have emerged and formed into five alternatives envisioning the future for New River Gorge and the historic Nuttallburg mining site. The effects of each alternative are assessed and a preferred alternative is identified. A draft plan that describes the alternatives and impacts of implementing each will be available for public input, and after analyzing public comments, a final plan will be completed.

Your concerns, interests, and opinions are crucial to the success of park planning efforts. We will keep you informed via the park website, newsletters, open houses, and public meetings. If you would like to be part of the park mailing list, please call (304) 465-6526, or visit the park website at www.nps.gov/neri and click on "General Management Plan." We look forward to hearing from you!

How's the Water?

The New, Gauley, and Bluestone Rivers are all part of the greater New River watershed that extends from the North Carolina mountains, through the mountains and pastoral farm lands of southern Virginia, to southern West Virginia. The rivers and streams of the watershed are affected by mining, logging, manufacturing, agriculture, and disposal of human waste.

continued page 7
Your Three Parks

BLUESTONE NATIONAL SCENIC RIVER

In 1988, Bluestone National Scenic River was designated a unit of the Wild and Scenic Rivers System, which Congress established to preserve the free-flowing condition of the nation's rivers. This park includes a 10.5-mile segment of the Bluestone River with virtually no vehicular access into the area. The most common methods of entry are the aerial tram at Pipestem Resort State Park and the trailhead at Bluestone State Park. The area is cooperatively managed with the West Virginia Division of Natural Resources. Wild turkey and whitetail deer are the featured species, and the area is popular with hunters.

GAULEY RIVER NATIONAL RECREATION AREA

Established in 1988, Gauley River National Recreation Area protects 25 miles of the Gauley River and 6 miles of the Meadow River. Dropping 26 feet per mile through a gorge that averages 500 feet in depth, the Gauley is a world-class destination for whitewater boaters. Only about 1/3 of the land within park boundaries is in federal ownership; public facilities, including river access areas, are limited and not well developed. The Tailwaters area below the Summersville Dam offers the only public facilities at this time.

NEW RIVER GORGE NATIONAL RIVER

New River Gorge National River was designated in 1978, protecting 53 miles of one of the oldest rivers in the world. The gorge averages 1,000 feet in depth and contains one of the most diverse plant species assemblages of any river gorge in the southern Appalachians. Cultural resources include prehistoric sites as well as remnants from the recent Industrial Age: abandoned coal mines, company towns, tipplers, and coke ovens. Annually, one million visitors enjoy a full spectrum of recreational activities. The New River is renowned for its warmwater fishery and outstanding whitewater boating. Massive sandstone cliffs challenge rock climbers, while trails and overlooks offer less strenuous opportunities for enjoyment.

Visitor Information

In Case of an Emergency
Call 911 from any phone in the park to report emergencies. Park rangers, as well as county sheriffs and state police, are on patrol throughout the park. Emergency care facilities and hospitals are located in Summersville, Oak Hill, Beckley, and Hinton.

Weather and Climate
- Winters are variable, ranging from mild to frigid. Prepare for ranges from 50 degrees and mild, to -10 degrees and blizzard conditions.
- Spring is very unpredictable — generally mild and wet, it alternates between beautiful and questionable conditions.
- Summers are always warm, sometimes hot, with thunderstorms likely.
- Fall is generally the driest and most stable season, with cool mornings and mild days.
- Plan your trip to expect rain or thunderstorms; expect snow during the winter months.
- The weather can vary greatly within the region. This is particularly true during the spring and summer thunderstorm season.
- Thunderstorms are common. If caught outside during a storm, avoid high points, exposed locations, and open fields.

Getting Around
To the Park: by personal vehicle via Interstate 77/64, U.S. Route 19; via airplane with airports in Beckley and Charleston; via train — AMTRAK stops at Montgomery, Thurmond ("flag" stop, reservations required), Prince, and Hinton.

Within the Park: personal vehicle, foot, or boat; bicycle and horseback on designated trails. A Scenic Drives brochure is available on request.
Out and About

The three parks offer a great variety of outdoor activities — biking, fishing, hiking, paddling, rock climbing, or sightseeing. Please enjoy the parks, but also take steps to protect both yourself and the park environment. Always respect privately-owned land!

Safety First

- Area roads are narrow. Share the road. Expect oncoming traffic.
- Railroad lines throughout the park are active and are private property. Do not cross railroad tracks or trespass on railroad rights-of-way.
- Know the weather forecast and plan/dress accordingly. If you hear thunder, you are close enough to the storm to be struck by lightning. Seek shelter and stay away from water.
- Take drinking water, and do not drink water from streams or rivers.
- Poison ivy is common. Leaves of three, let it be!
- Be aware of two species of venomous snakes, the copperhead and timber rattlesnake.
- Hunting is allowed within the park — wearing blaze orange is recommended during hunting season.
- Many recreation activities (paddling, climbing, etc.) require special equipment, knowledge, and skills — contact a park ranger or qualified instructor for more information.

Leave No Trace

Each of us has different reasons for visiting parks. Today, more and more of us are taking the opportunity to explore these areas and the land often shows the results of this use.

You can help minimize the impact of your visit to the park by following these basic Leave No Trace principles:
- Plan ahead and prepare
- Travel and camp on durable surfaces
- Dispose of waste properly
- Leave what you find
- Minimize campfire impacts
- Respect wildlife
- Be considerate of other visitors

Put litter, even crumbs, peels and cores, in its proper place — a trash can.

Observe wildlife from a distance and never approach, feed or follow them.

Special Events

EXCURSION TRAIN AND HINTON RAILROAD DAYS
Two Weekends in October
Hinton (www.newrivertrain.com)

BRIDGE DAY
3rd Saturday in October
New River Gorge Bridge (9:00 am – 3:00 pm)

WILDFLOWER WEEKEND
Last Weekend in April
Locations throughout the park

Volunteers in the Parks

Volunteers at New River Gorge National River provide valuable service to the park and the environment with resource management projects, trail construction and maintenance, administration, interpretive activities, special events, and cleanup programs.

Volunteers of all backgrounds and skills are encouraged to become involved and contribute their talents and enthusiasm toward helping the park.

The Volunteer In Parks (VIP) program is the means by which volunteers can assist the park in a way that is mutually beneficial to the National Park Service and the volunteer or volunteer group. For more information, contact the Volunteer In Parks Program Coordinator at (304) 466-0417.
Map and Highlights

The world's second largest single span steel arch bridge carries U.S. Route 19 across the gorge under the bridge. Parking at the river affords views of a Whitewater rapid and the New River Bridge Day, the third Saturday in October.

Canyon Rim Visitor Center
A special celebration is held there on Bridge Day. The 3.8 miles of trails provide an introduction to the geology, history, and ecology of the area. The restored depot provides a glimpse of the golden days of railroading. It serves as a summer visitor center and museum.

Thurmond Depot
A fully-accessible boardwalk winds across islands to viewing areas of the river-wide falls. Boardwalk exhibits enhance the walk. Enjoy fishing or a picnic near the river. Stone Cliff has primitive camping (no water).

Sandstone Falls Overlook
A steep descent to the Kaymoor Mine site.

Grandview Information Station
This small summer-season center offers information and a bookstore. Notable are a floor map of the New River Watershed, a bookstore, and a native plant garden.

Middle Gorge Area
This center has a theater, information desk, bookstore, and exhibit areas highlighting park history, geology, and ecology. The gorge and bridge may be viewed from indoor and outdoor fully-accessible observation areas.

New River Gorge Bridge
This center has a theater, information desk, bookstore, and exhibit areas highlighting park history, geology, and ecology. The gorge and bridge may be viewed from indoor and outdoor fully-accessible observation areas.

Gorge Bridge Day
The third Saturday in October.

Fayetteville Trail
A leisurely walk on this forest loop trail offers river views and picnic tables.

Bluestone River Park
Hiking/biking along a rail line

Sunset Station Road
This road descends into the gorge under the bridge. Parking at the river affords views of a Whitewater rapid and the New River Bridge Day, the third Saturday in October.

New River Bridge Trail
A steep descent to the Kaymoor Mine site.

Long Point Trail
A steep descent to the Kaymoor Mine site.

Long Point Trail
A steep descent to the Kaymoor Mine site.

A short path from a roadside pull-off on Route 20

Arbuckle Connector Trail
A moderate hiking/biking trail requiring a 150-step climb.

Tunnel Trail
A loop through a ridge-top forest

Theatre West Virginia offers outdoor dramas nightly in the summer seasons.

Sandstone Visitor Center
This small summer-season center offers information and a bookstore.

Dunglen and Stone Cliff Area
A pleasant place along the river, the site offers a boat launch and primitive camping (no water).

Twilight Park Loop Trail
A leisurely walk on this forest loop trail offers river views and picnic tables.

Middle Gorge Area
This center has a theater, information desk, bookstore, and exhibit areas highlighting park history, geology, and ecology. The gorge and bridge may be viewed from indoor and outdoor fully-accessible observation areas.

Arrowheads of the Past and Present

Look closely at the National Park Service arrowhead symbol and you will see the purpose of the National Park System—the protection and understanding of all the objects illustrated there—the trees and bison for plant and wildlife, the mountain and river for landscapes and water resources, and all this inside an arrowhead representing the human history of our nation. The arrowhead is a fitting symbol for our history; it is part of the beginning of the human story of our nation.

The story of American Indians in the New River Gorge area of southern West Virginia is very rich, but often misunderstood. Most of the stories involving native peoples center on “historically” documented tribes and their interaction with the European and African peoples who came into this area in the mid 1600s. What we usually consider the beginning of the story is actually an ending.

The Arrowheads of the Past

Peoples of the Archaic and Woodland periods lived in our area for thousands of years (from approximately 8,000 B.C. to 1,200 A.D.), constructing palisaded villages and elaborate burial mounds, progressing from spears to bow and arrows, producing clay and stone pottery and art objects, and extensively cultivating corn, squash, and beans. They were the ancestors of the people we know of today in eastern North America as the Cherokee and Shawnee.

Dating artifacts and archeological sites is the first step in unfolding the history of humanity. To carelessly remove or disturb archeological sites is like tearing out chapters from an ancient book or throwing away pieces to a puzzle—the story of our past will never be complete.

The National Park Service arrowhead symbol reminds us all of our responsibility to protect and preserve our nation’s heritage. The lands of New River Gorge National River, Bluestone National Scenic River, and Gauley River National Recreation Area protect 400 documented Indian archeological sites. These sites range from temporary rock shelter campsites to small villages. All artifacts and objects in the parks are protected, may be collected and studied only by the park archeologist, or authorized university or preservation organizations.

The Sandstone Visitor Center includes an exhibit concerning American Indian peoples and a sample Clovis point. The park occasionally offers special programs, including the display of ancient artifacts, storytelling, and demonstrations of American Indian lifestyles by costumed re-enactors.

Read All About It!

To learn more about your national parks—read on. When you shop in one of the park visitor center bookstores you increase not only your understanding, but also your support, of New River Gorge National River. Eastern National is a non-profit organization that operates many national park bookstores. It is committed to the protection, of New River Gorge National River and Gauley River National Recreation Area serve as an important habitat for bats. Protecting these resources benefits all bats in the area.

Once the bats start emerging, the evening goes pretty quickly. Josh pulls bats out of the traps, back lights them with a flashlight, scrutinizes the wing membrane, and calls out to me, “adult, male, little brown!” He pulls out pipistrels, northerns, small-footed, big browns, Indians, and Virginia big-eared bats. Josh particularly enjoys it when a big brown hits the net. “Looks like a B-52 compared to the others,” he says, wincing from the pressure of its bite through his thick leather glove.

Bats are still among the world’s least appreciated and most endangered animals. Like other wildlife, bats suffer from habitat loss and environmental pollution, but persecution from humans remains a primary cause of their decline. There are thirteen bat species documented in West Virginia; three are federally listed as endangered (Virginia big-eared bat, Corynorhinus townsendii virginianus; gray bat, Myotis grisescens; and Indiana bat, M. sodalis) and two are identified by the West Virginia Division of Natural Resources as rare or critically imperiled in West Virginia (Rafinesque’s big-eared bat, C. rafinesquii; and small-footed myotis, M. leibii). The abandoned coal mines, large tracts of intact forest, and reliable water sources at New River Gorge National River and Gauley River National Recreation Area serve as an important habitat for bats. Protecting these resources benefits all bats in the area.

I find it both important and fascinating to discover what is living in these old mine openings. My firsthand experience with the bats will help me to develop a range of measures to protect their habitat. Although old mine works in the park are mostly devoid of coal, they still serve an important purpose and are worthy of preservation.

Gene Clare, NPS Geologist
Traveling Home

The peregrine falcon is the world’s fastest bird. It can reach a speed of over 200 miles per hour in a vertical dive, and in level flight average about 40 to 55 miles per hour. The name “peregrine” comes from Latin peregrini, “to travel in foreign countries,” referring to the peregrine’s habit of making long fall and spring migrations between its North American nesting and South American wintering habitats. Despite these travels, these majestic birds have not been seen in New River Gorge National River in many years. It is time they traveled home.

How’s the Water?

continued from page 1

Precipitation, and high discharge. The rivers may also be negatively affected by trace metals and other compounds, sediment, and acidic runoff.

The National Park Service takes a proactive stance to maintain and improve water quality in the three parks. We share information and work with watershed associations, local communities, counties, and state and other federal agencies, environmental groups, industries, schools, and individuals to foster a sense of responsibility for these nationally important waters so that water quality is improved and maintained to inspire future generations.

For more information about water quality in the three parks, please contact the Aquatic Resources Team program leader, Dr. Jesse M. Purvis, at (304) 465-6513.

Bearly Edible

The gastronomic delights acquired by wild animals in their nightly perusal of trash cans are detrimental to their health, and the resulting mess created by their less than epicurean manners creates a costly clean-up.

Animals that become accustomed to treats found in garbage cans may inadvertently consume plastic, paper, fishing line, aluminum foil, Styrofoam, and other indigestible products that can clog their digestive system. And, when animals learn that humans can provide a cheap and easy food source, they often lose their natural fear of humans, and this leads to safety problems for both parties.

Forbidden Fruits

Sheet moss, ginseng, black cohosh, bloodroot, redbud, cherry trees, shrub yellow-root, and grapevines... what do these plants have in common? Each occurs within New River Gorge National River and is highly desired for its commercial value. Each year, hundreds of plants are illegally harvested for medicinal use, their landscape appeal, or for the craft industry.

Ginseng, a slow-growing plant native to the hardwood forests of the eastern United States, has been harvested for centuries as a healing herb and is prized in the Orient for its purported curative properties. Today, the world demand for Appalachian ginseng is so great that the price is soaring, poaching is increasing, and the plant is disappearing.

Sheet moss, although it pays relatively little, is rapidly becoming the “quick buck” of the commercial harvester. Large sections of moss are ripped from the ground, rolled like a carpet, and stuffed into bags. The moss is used in the craft and nursery industries to line flower baskets. Traditionally, moss was used to line caskets, and is still occasionally used for that purpose today.

Although plants are taken for their short-term commercial value, they have a more important long-term role in the ecosystem of the park. Many plants are food sources; others offer shelter and shade for a variety of animal and other plant life. When one species is eliminated from the forest, it changes the dynamics of the entire ecosystem.

Occasionally plants are illegally taken from our state and national parks and forests due to unfamiliarity with park boundaries and regulations. For some, however, the money makes it seem worth the risk. Imagine the loss if every one of the over one million visitors to New River Gorge National River took one bag of moss, or one cherry tree, or one ginseng plant.

All of the plants within the park are protected forever, so that present and future generations can enjoy them, and so the ecosystem can develop and evolve. You can help. Commercial harvest is illegal. If you see someone digging plants or cutting trees within the park, please notify the park rangers. Help us to educate collectors and to protect your national park.
Especially for Kids!

The Arrowhead is the National Park Service symbol.

Using what you see on the arrowhead, fill in the blanks.

The _______ _______ _______ represents all of the plants that grow and are protected in your National Parks.

The _______ _______ _______ represents all of the animals that live in parks and are protected in your National Parks.

The _______ _______ _______ represents the different landforms that are found in your National Parks.

The _______ _______ _______ _______ _______ shape represents many stories from the past and special places in history that are preserved in your National Parks.

Parks are Homes

Many different kinds of animals find food, water, and shelter in the park. Trees are animal homes and hiding places. The seeds of some trees are animal food.

Find ten animals hidden in this tree, and then use the code to find the name of each.

| A | B | C | D | E | F | G | H | I | J | K | L | M | N | O | P | Q | R | S | T | U | V | W | X | Y | Z |
