national forest vacations
Snowcapped peaks, mountain meadows, and swift-flowing streams; trout fishing amid scenic grandeur; a variety of wildlife and a profusion of colorful flowers and shrubs; countless birds and small animals in a forest setting. . . . This and more is offered to the American people when they visit the 187 million acres of the National Forest System administered by the Forest Service of the U.S. Department of Agriculture. From coast to coast and from border to border, 154 National Forests offer camping, fishing, hunting, picnicking, hiking, skiing, and many other forms of healthful outdoor activity. Why not spend your next vacation on a National Forest?

Issued June 1973
(Supersedes FS-50, same title)
You can enjoy doing your special vacation thing in a superlative setting of scenic charm and natural beauty—on one of the 154 National Forests managed by the Forest Service of the Department of Agriculture. The choice of outings is yours: rough it on a sylvan trail or relive the days of the pioneer by adventuring in remote stretches of comparatively untouched America, either on horseback or by toting a backpack into a wilderness. Or perhaps you'd rather take a leisurely drive to a nearby woods for a picnic outing or an extended weekend campout.

Whatever your desire, your quest for fun and excitement can be easily satisfied. You'll find a National Forest vacation spot within a day's drive of almost any point in the United States, except Hawaii and parts of Alaska. The 187 million acres in the National Forest System offer you endless variety in vegetation, scenery, climate, and topography:

- Cypress swamps and sand pines in the South
- Alpine meadows and great fir forests in the Rocky Mountains of the West and the Cascade Range of Oregon and Washington . . .
- Spreading hardwoods in the Midwest and Appalachian Mountains . . .
- Giant Sequoias in the Sierras of California
- Lush greenery and verdant slopes in the New England States . . .
- Semi-desert landscapes in Utah . . .

The National Forest System embraces dense, humid forest, desert range, parklike open timber, and above-timberland tundras. Each vegetative type has a seasonal mood to suit your fancy.

Thriving within the particular ecosystem created by each of these plant associations is a distinctive variety of wildlife and wildflowers, offering special appeal for recreationists and nature lovers.

Geologically, the topography ranges from limestone sinks to glacier-clad craggies and from coastal flats to deep-cut canyons. Most National Forests are in hilly or mountainous terrain, except for some units in the South and Lake States.

In summer, the days are warm and sunny and the nights cool; in autumn, the air sparkles and the hills are a symphony in color; in winter, deep snows cover the ground and store moisture for summer runoffs.

Skiers and snowmobilers find the snowclad hills of the National Forests an ideal playground. From Alta, Utah to Mt. Hood, Oreg. and from Mammoth Mountains to Wildcat Ravine, there's excitement and fun for everyone.

Select your National Forest for doing your thing. Forest Service officers are at your service to help plan a vacation you'll never forget. The list of offices on page 54 will guide you in directing your inquiry.
There's more to a forest than trees—and the Forest Service helps people see beyond the trees. Here are some ways your vacation outing is made more enjoyable and memorable.

**Signs.** We enhance your visit to a National Forest by providing information aids—signs on the land that identify where you are, describe what you are looking at, and tell why the area is significant as a natural attraction.

You will find particularly helpful:
- *Wayside exhibits and signs;*
- *Scenic roadside overlooks and vistas;*
- *Self-guiding and guided walking trails;*
- *Guided auto tours.*

Many National Forests also feature "front door" information stations where a visitor can obtain maps and brochures of the area and information about recreational attractions and opportunities.

**Visitor Information Service.** Some National Forest recreation sites have become publicly significant because of unusual historical, geological, scenic, or botanical features; consequently, they attract more visitors. At these locations, visitors are welcomed at an attractively designed and arranged Visitor Center which helps enrich their on-the-ground forest experiences. This interpretive service features exhibits, dioramas (three-dimensional scenes), slide-tape talks, and movies which explain highlights of botany, geology, ecology, zoology, history, geography, and archeology.

An *interpretive naturalist* adds a personal touch by greeting visitors at the Center and orienting them to the National Forest and its many recreation opportunities and facilities. He answers questions, distributes maps and brochures, and helps visitors plan their outing. Other forest naturalists present illustrated talks at the Centers, lead interpretive walks, and conduct evening campfire programs.

**Trails for Handicapped.** Recent additions to the interpretive program include trails designed for the visually and physically handicapped. The Roaring Fork Braille Trail, White River National Forest, Colo., and the Trail of the Whispering Pines, San Bernardino National Forest, Calif., are the first of these to be built. The most recently dedicated is the Trout Pond area in Florida. Nine National Forests now feature recreation sites that handicapped people can enjoy.

**Marine Life.** Visitors to the Lake Tahoe area of the Eldorado National Forest, Calif., can experience a unique underwater view of trout, Kokanee salmon, and other stream life in their natural habitat of Taylor Creek. Through the windows of the Stream Profile Chamber, visitors learn of the spawning and eating habits of fish and view exhibits which further explain the underwater ecology of Taylor Creek.

**More Attractions.** Other unique interpretive opportunities on National Forests include:

- *A ride on the Narrow Gauge Railroad in the San Juan National Forest, Colo.;*
- *A walk along the interpretive boardwalk through the botanical paradise of the Cranberry Glades, Monongahela National Forest, W. Va.;*
- *A guided boat tour on Echo Lake, Eldorado National Forest, Calif.;*
- *An inland waterway cruise aboard the Alaska Ferry up the North Pacific Coast from Seattle, Wash. to Skagway.*

Through all these activities, the Forest Service seeks to instill in forest visitors an appreciation of the value of their natural and cultural heritage, so that they may enjoy the natural environment, and understand the necessity for wise management of our natural resources. A listing of the major visitor information facilities can be found on pp. 26–27.
Recreation is One of Many Forest Resources

The National Forests are publicly owned lands managed for the sustained production of various products and services. They provide not only an important part of the Nation's recreation areas, but also produce vital quantities of water for domestic and industrial purposes, 30 percent of the Nation's softwood sawtimber harvest, and substantial forage crops sustaining more than 7.2 million head of livestock and a large part of the wildlife in America. They also contain outstanding examples of our Nation's previous wilderness heritage.

These forest resources are managed by the Forest Service under a coordinated system of multiple use. Multiple use means that National Forests support and supply several different crops and services simultaneously. Thus on large forest areas, timber harvesting, livestock grazing, various uses of water, recreation, hunting and fishing, berrypicking, and similar activities may be carried on at the same time. Adjustment of activities prevents measurable interference with each other. Here and there, one resource use may be so important as to be given top priority or exclude other uses. The multiple use plan provides for this. The objective is to maintain a coordinated pattern of use which will produce the largest net total of public benefits, both now and in the future.

In addition to their value for recreation, National Forest lands contribute to other areas of American life. Sales of National Forest timber for lumber and pulp, plus fees for various other uses of timber and National Forest land, bring in more than $300 million a year to the U.S. Treasury. One-fourth of this income is returned to the States from which it came for use on schools and roads in the counties having National Forest land. (In calendar year 1972, the States received $85 million as their share of fiscal year 1972 receipts.) An additional 10 percent is used to build roads and trails within the National Forests. The benefits of multiple-use management extend from beautiful forests and plentiful resources to the jobs and industries in the rural areas of our country.
Fees are generally charged for the use of developed recreation sites and areas for camping, swimming, boating, and similar activities on public lands. There are various kinds of fees that will be collected on National Forest Lands during the year under the guidelines of the Federal Recreation Fee Program. Special Recreation Daily Use Fees will be charged for specialized sites, facilities, equipment, or services provided by the Forest Service. No special recreation use fee will be collected for facilities which virtually all visitors might reasonably expect to use, such as roads or trails.

Entrance or admission fees will be charged at National Recreation Areas where admission can be uniformly controlled at established manned entrance stations and where fees can be collected and explained. A "Golden Eagle Passport" is valid at such National Recreation Areas. The Golden Eagle admits the purchaser, his immediate family, and all other persons accompanying the purchaser in one private, noncommercial vehicle. It sells for a nominal fee.

The new "Golden Age Passport" is a free annual entrance permit for any person 62 years of age or older. It entitles the bearer and any person accompanying the bearer in a single private noncommercial vehicle to enter any area designated for entrance or admission fees. In addition, it authorizes the use of sites, facilities, equipment, or services at a rate of 50 percent of the established daily use fee. The Golden Eagle Passport and the Golden Age Passport will be available at most local Forest Service Offices. One-day permits will be available at all designated recreation sites.
Do you like to barbecue a hotdog or broil a steak over charcoal? Do you relish a brisk morning outdoors, teased by the tantalizing aroma of fresh coffee and sizzling bacon? You can find a picturesque setting for this kind of enjoyment in a developed picnic area or campground on a National Forest. The Forest Service offers you nearly 7,000 of these friendly sites in sylvan settings that invite you to come back again. If all the sites were occupied at one time, some 515,000 people could find an escape from urban boredom. In 1971, people chalked up over 41 million visitor days of use on these sites—double the number tallied 20 years ago. The Forest Service has plans for many new camp and picnic grounds to meet the accelerating demand for this kind of outdoor recreation.

Convenience facilities are cued to the local environment. Near population centers where public use is heavy access roads may be paved, parking areas hard-topped, and sanitation facilities completely modern. In contrast, a remote site may have a more primitive or rustic atmosphere and more privacy. The choice is yours—you can have nearby neighbors or complete seclusion. Camper trailers are “in.” Many sites have been specially designed for these mobile units with built-in facilities that can wheel over modern highways to a comfortable setting in the pines. Where such trailers can be accommodated safely, they are permitted. At some sites, central sanitation stations are provided for disposal of sewage and waste water. Overcrowding may be a problem on weekends and holidays during the recreation season. For that reason, time limits for stays for each party may be required at some popular National Forest campgrounds. Notice of time limits are posted prominently. The more popular picnic and campground sites require an admission fee. If extra public facilities are furnished, an additional fee may be charged.

Location. The Forest Service selects the most attractive surroundings available in a National Forest for a campground or picnic site. You may find your campsite in dense timber on the shores of a lake in the Great Lakes region or beside an irrigation reservoir in the Arizona desert, within sight of a giant 40-foot cactus. You may picnic on an ocean beach with the surf pounding nearby, or you may camp in an alpine meadow where lovely flowers bloom near eternal snow. But wherever you go to enjoy a developed recreation site, you will find scenic beauty, shade, forest environment, and unusual recreational opportunity.

Accessibility. The typical picnic or campground site is well-screened from passing traffic. It is usually only a short drive from the arterial highway. The more remote sites may be reached only by quiet forest roads or on foot or horseback on wilderness trails. Some camps remain open the year around—others are usable only during the summer.

Supplies. “Bring your own” is the word. That goes for tents, bedding, cooking utensils, and food. Outdoor grills are usually available. Town stores near many of the campgrounds can furnish staple items. Other campgrounds may be remote from a supply source. The best advice is: plan carefully, obtain proper equipment, and take along enough food and drinking water. If you are planning a stay at a remote location, remembering these items is particularly important.
Enjoy the Thrill of Water Sports

You can swim, sail, or paddle a rubber raft on some of the more popular and accessible water areas on the National Forests. Adventurous folks can skin-dive, boat, fish, or water ski where conditions permit. The National Forests offer more than 70,000 miles of picturesque streams and rivers, plus thousands of beckoning lakes and ponds, to lure recreationists who like water oriented outdoor activities. Everyone can splash his way to fun in waters that suit his fancy and budget.

The exploring canoeist can lose himself in a maze of waterways on Minnesota's Boundary Waters Canoe Area, threading water trails that penetrate the trackless wilderness. The Canoe Area and similar sites offer unique recreation opportunities for the paddle and portage enthusiasts.

Even in Arizona's high and dry desert country, spectacular National Forest lakes near Phoenix and Tucson have boomed boating and swimming into big business. Sailboats, speedboats, and excursion craft travel the waters of many other popular lakes on National Forests, like Lake Chelan in Washington, an inland fiord tucked in between vertical cliffs. Some smaller lakes and parts of large lakes are reserved for motorless fishing boats only. The placid waters of swampland back country attract many visitors.

Swimmers may relax in warm Florida waters or brave the nippiness of mountain lakes or streams at higher altitudes. The Lake States, the Northwest, and the Rockies have generous water resources. The best swimming in the West occurs where clear mountain rivers have run far enough into the valleys to lose their high-country chill. In many places, the Forest Service has developed beaches; provided for public safety; installed diving boards, rafts, and dressing rooms; dammed streams to raise water levels; and built public boat ramps at marinas. Hundreds of ways have been developed to enhance the attractiveness and improve the accessibility of popular streams and lakes.
Small and big game animals, birds and fish, plus reptiles and amphibians, thrive in the favorable natural habitats found on National Forest lands. The generous supply of food and cover furnishes the proper environment needed to protect and propagate the Nation's fish and wildlife. In some cases, this safeguarding may favor the survival of an endangered species whose existence has been threatened by man's activities or other factors. A wildlife refuge established for the rare California condor is an example of such protective custody. More recently, a management area was established in Oregon for the American osprey, through cooperative action by the Oregon State Game Commission and the Forest Service.

Wild mammals and birds are frequently the principal attractions that draw motorists, campers, or hikers to outdoor recreation sites. The chance to see a bear and cubs, a raccoon, or a deer in a forest or mountain environment excites the typical National Forest visitor. Wildlife found in picturesque settings enhances the esthetic values of forests and offers choice subjects for camera fans. For most families, shooting a picture for fun offers more recreational satisfaction than firing a gun to obtain meat.

The resource management program of the Forest Service provides habitats for many well known species. Deer are the most common of all big game animals; elk rank second. Other popular big game species include antelope; black, grizzly, and Alaska brown bear; moose; mountain goat; bighorn sheep; and peccary or javelina.

Other less often seen species of wildlife are cougar, coyote, lynx, and bobcat, plus many smaller furbearers. Popular game birds include blue grouse, ruffed grouse, Franklin grouse or "food hen," quail, wild turkey, and many species of ducks.

This great variety of fish and wildlife and the opportunities it brings to sportsmen, makes the National Forests increasingly popular with the Nation's fishermen and hunters. The National Forests provide an ideal home for more than half the big game animals in the West. Some of America's finest fishing waters are in National Forests, with many of the country's best trout streams on these public lands. Cold mountain lakes, clear fast-running streams, and the slower rivers and meandering brooks provide habitats for a wide variety of food and game fish, and fishing opportunities for millions of people.

State game laws apply to all wildlife whether found on National Forests, State, or private lands. There are no separate or special game laws for wildlife found on National Forests. See your local State game and fish department officials for information about open seasons, license fees, bag limits, and other details. Forest Service officials will help you with maps and other information if you plan to visit a National Forest on your next hunting or fishing excursion.
When deep winter snows mantle mountainous National Forest lands, another contingent of adventurous fun seekers heads for the hills. They are out to enjoy a thrilling variety of winter sports, which are now among the fastest growing segments of outdoor recreation. Winter is a time of comradeship—a cheerful occasion for downhill skiing, ski touring, skating, snowmobiling, tobogganing, snowshoeing, ice fishing, and ski jumping for the daring. Downhill skiing is the most popular of winter sports. Developed areas with uphill lifts and tows and attractive lodge facilities have boomed skiing, as both a spectator and participant sport. Most major ski areas in the western States are situated in whole or in part on National Forest lands. Squaw Valley, California on the Tahoe National Forest, was selected as the site for the International 1960 Winter Olympics. Fine slopes for skiers are also found on the National Forests of the Great Lake States and New England. In the Southwest, several high-altitude ski runs are 1 or 2 hours' drive from a balmy winter climate. The National Forests have about 208 developed ski areas with a total one-time capacity of 378,000 persons. These areas have varying combinations of such facilities as shelters, ski shops, and ski lifts or tows. Many areas have restaurants, lodges, ski schools, and other services operated by concessioners under permits from the Forest Service. Forest Service snow rangers and engineers carefully inspect all ski lifts and tows and assist the concessioners in providing avalanche control where needed for public safety. The National Ski Patrol, which searches for lost skiers and renders first aid to injured persons, works closely with snow rangers who are in charge of most areas. You will have more fun and be better able to avoid accidents if you take lessons from a good instructor. Instructors certified by the National Ski Association are available at all but the smallest areas. Any enjoyable ski outing begins with the proper equipment. Well-fitted ski boots and skis are essential. Snow-proof ski clothing and glare protection can make your day on the hill much more pleasant.

The best places to ski are high in the mountains where the snow is deep and dependable, and enough development has taken place to make skiing a pleasure. Seasons run from November to as late as June in the high country. Snow avalanches are a hazard at some of the steepest alpine areas, so heed the advice of the snow ranger or ski patrolmen and stay off slopes that are designated "closed." There are extensive stretches of fine skiing touring country. Ski touring, or cross-country skiing, is a sport for the experts. It requires competence, stamina, and careful preparation. Cross-country skiing, like mountain climbing and wilderness hiking, should never be undertaken alone.

Within a comparatively short period, snowmobiling has swept into a leading position in the field of winter sports. In 1971, some 2 million visitor days were devoted on the National Forests to use of ice and snow craft, including snowmobiles. The agile tracked snowcraft can travel cross-country and require no trails. They have opened up previously inaccessible back-country to concentrated use by many people; this has brought some problems as well as benefits. Lakes are particularly popular, as are cross-country trails, with picnic lunch stopovers enroute. This new use of National Forest lands is scheduled to increase tremendously as the popular priced snowcraft becomes available to more families.

A 24-page booklet entitled "Skiing," which lists the ski areas in National Forest throughout the country, is for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402—price 50 cents. Colorful ski safety posters are also available from any of the Forest Service regional offices (see p. 54) or the Washington office.
Wilderness Satisfies the Search for Solitude

Viewed with awe and some misgivings by early settlers, America's wilderness has been interwoven into the Nation's folklore, history, art, and literature. The wilderness that witnessed the birth and early growth of this Nation no longer spreads from ocean to ocean. But neither has it been vanquished. These untamed wild lands now comprise about 10 percent of the National Forest System. About 10 million acres of roadless wilderness in 61 areas are held in trust by the Forest Service for the use, enjoyment, and spiritual enrichment of the American people. Another 4.3 million acres in 27 primitive areas are being reviewed under provisions of the Wilderness Act of 1964 to determine their suitability for inclusion in the National Wilderness Preservation System. The Wilderness Act directs three Federal Agencies—the Forest Service, Fish and Wildlife Service, and National Park Service to take appropriate action to preserve wilderness. Wilderness is defined in the Act as Federal land "where the earth and its community of life are untrammeled by man . . . retaining its primeval character and influence, without permanent improvements or human habitation . . . generally appears to have been affected primarily by the forces of nature, with the imprint of man's work substantially unnoticeable. . . ."

In wilderness, man is merely a visitor. He leaves only footprints and takes away only memories. So when you enter a National Forest Wilderness on foot, in a canoe, or on horseback—no motorized conveyances are permitted—expect no resorts, no piped water, no prepared shelters, no toilet facilities, no table on which to eat your meals, and no grill to hold your cooking utensils. There will be few trail signs to guide you, so you must know how to use a compass and read a map. You will be on your own in a sometimes alien and unfamiliar environment. Be prepared to meet unexpected storms and overcome other climatic dangers.

You may also meet wild creatures who likewise love solitude, and may resent your intrusion on their domain.

Varying from the spectacular Three Sisters in central Oregon to the blistering desert of the Superstition Mountains in Arizona, from the Great Gulf Wilderness in New Hampshire to the San Rafael just east of Santa Barbara, National Forest Wildernesses contain examples of all types of wilderness resource. In these unique places, the enduring resource of wilderness is protected for you and your grandchildren. These oases of untouched nature are immeasurably valuable as preserves for scientific and educational purposes and for the physical and spiritual renewal of the American people. Dedicating a reasonable amount of the National Forests to such use is a part of the concept of multiple use for the greatest public good.

A unique part of the National Forest Wilderness System is the Boundary Waters Canoe Area in Superior National Forest in Minnesota. Here is a lake-and-stream wonderland left over from the last Ice Age—hundreds of miles of wilderness paddle-and-portage routes accessible only by canoe.

Although many visitors to the National Forests penetrate the wilderness entirely on their own, either afoot or on horses rented from nearby ranches, solo travel is not recommended for safety reasons. In some areas, a popular method is to lead a single burro carrying the camp outfit while the hiker enjoys the trail unburdened by a load. Several organizations also sponsor group pack trips into the National Forest Wildernesses for hunting or sightseeing—or just to get people away from city streets for awhile. Guides who double as cooks, packers, and horse wranglers usually accompany these trips. Any able-bodied person is eligible to join a group.

Many of our country's major rivers have played a dramatic role in the history and settlement of our nation. Their historic and cultural significance has stimulated conservationists to protect those portions of our national river system that remain natural, relatively undisturbed, and rich in scenic qualities. Congress recognized the need for this safeguarding action by enacting the Wild and Scenic Rivers Act in 1968. It directed that studies be made of 27 rivers named in the Act to determine their qualifications for inclusion in the Wild and Scenic Rivers System. The Forest Service was designated as the Federal leader in the study of nine of these rivers. These streams are the Chattooga in Georgia, North Carolina, and South Carolina; the Flathead in Montana; the Illinois in Oregon; the Pere Marquette in Michigan; the Moyie, Priest, St. Joe, and Salmon, all in Idaho; and the Skagit in Washington. Each river study is done cooperatively with various Federal, State, and local agencies and other interested parties. The completed study report will be submitted to the President and Congress by the Secretary of Agriculture with his recommendations and the views of other Federal agencies and the States concerned. Scenic rivers so designated are to be kept natural and free-flowing without dams or other obstructions, and water quality is to be maintained. The shorelines are to be kept in a relatively primitive condition. Recreation is to be encouraged in harmony with the other resource values.

Parts of the Clearwater and Salmon Rivers in central Idaho, the Feather River in northern California, Rogue River in southwestern Oregon, Rio Grande in northern New Mexico, St. Croix and Wolf in Wisconsin, and Eleven Point River in southern Missouri were designated as wild or scenic rivers by Congress in 1968. All but the St. Croix are partly in National Forests. Sections of rivers classed as wild will be kept nearly primitive, with certain portions restricted to canoes or other nonmotorized craft, so that visitors may fully appreciate and enjoy the natural environment. In the scenic sections, a few minor facilities will be provided, such as picnic tables, fireplaces, parking areas, and restrooms.
A network of about 101,000 miles of hiking and horseback trails brings more remote National Forest recreational attractions within reach of the adventurous. This impressive mileage will undoubtedly expand as demands increase to improve the accessibility of off-road fishing, camping, and hunting areas. In 1971, about 5 1/2 million visitor days were chalked up by hikers and mountain climbers, and 2 1/2 million by horseback riders.

Congress, in 1968, saw the need for a superior trail system and established a Nationwide System of Trails. This is intended to meet future needs of hikers and horseback riders and to set standards for the construction and use of trails. The Act recognizes two kinds of trails, **Scenic** and **Recreational**. The Act designated the Appalachian Trail in the East and the Pacific Crest Trail in the West as the first components of a national trails system. Both trails try to avoid the intrusion of commercial and industrial developments.

In the East, the 2,000 mile Appalachian Trail extends from Mount Katahdin in Maine to Springer Mountain in Georgia. Almost one-third of this historic trail winds through eight National Forests. Skirting along the backbone of the Appalachians and other ranges, the trail traverses beautiful country giving hikers unusual pleasure, especially in spring or fall. Open-faced shelters and lean-tos are spaced along this trail at regular intervals. Open shelters are free for anyone to use; closed shelters, usually owned by local Appalachian Trail Clubs, rent for a moderate fee.

The more rugged Pacific Crest Trail System in the West will eventually stretch more than 2,300 miles from Canada to Mexico, traversing 25 National Forests for two-thirds of its length. At present, almost 900 miles of this trail running through Washington and Oregon are finished, as well as sections of the 1,400-mile stretch on National Forests in California. The trail runs along the summits of the Southern Cascade, Sierra Nevada, and Sierra Madre Mountain Ranges. Shelters are available on some parts of this trail. About 1,500 miles of it traverse National Forest Wilderness.

Studies are also underway on the Continental Divide and the Potomac Heritage Scenic Trails. Advisory Councils are being established to make long range planning consistent with public demands.

Joining the East and West together are several historic "cross-country" trails now being studied for restoration and marking—the Lewis and Clark Trail, the Oregon Trail, the Santa Fe Trail, and a proposed new one, the North Country Trail. The first is the 4,600-mile route taken by the Lewis and Clark Expedition of 1804-06 which explored the northwestern U.S.

It leads from the confluence of the Missouri and Mississippi Rivers near St. Louis across the Great Plains and the Rocky and Cascade Mountains to the mouth of the Columbia River near Portland, Oreg. After following the Missouri River for nearly 2,500 miles into central Montana, the trail passes through several National Forests, including one named after Lewis and Clark. The route passes over lofty forested mountains and traces swift rivers. Less well-known but equally inviting are thousands of other trails that crisscross scenic back country of the National Forests throughout the United States. For example, in the Pecos Wilderness of the Santa Fe National Forest, you can ride a horse or hike up a switch-back trail to high Lake Katherine or the top of Pecos Baldy Peak (12,500 feet) for a splendid view of the New Mexico high country. If you take this trip, you will come away feeling fortunate to be a part owner of this and 153 other National Forest areas that offer thrilling recreational opportunities.
Almost 200,000 miles of forest development roads serve the 187 million acre National Forest System. These arterials are commonly designated as primary roads or forest highways and secondary roads. The latter branch off from the principal high-speed traffic arterials to tap resource management areas in the back country. Forest highways traverse the more scenic sections of National Forests and are designed and built by the Bureau of Public Roads. They meet commonly recognized standards that protect and enhance natural beauty.

Secondary roads have been built for forest protection and resource development purposes, including timber harvesting and administrative use. They may be narrower and steeper than surfaced highways familiar to most motorists. Nevertheless, they are usually quite safe if traveled at reasonable speeds and with caution. Roads built for timber access or fire control reasons are planned to make accessible vast, virtually unused areas for public hunting, fishing, and forest recreation of many kinds. This is particularly true in remote sections of the West.

Hardly a mile of the roads that make up the National Forest Transportation System is without scenic appeal. A road may lead into a streamside sanctuary where fishing and camping is the attraction. Or, it may wind to the top of a lofty lookout peak where a panoramic view of forested lands can be absorbed visually. Many families derive satisfaction from taking a windshield tour of scenic forest areas. Whatever the roads' route or destination, the beauty of the forest environment is always considered when locating the road through National Forests. During road construction (as well as in timber harvests) special efforts are made to retain the trees and scenic values along roadsides. Unnecessary scarring of the landscape is avoided, slash is cleaned up, and disturbed soil in mulched and reseeded. With a little assistance, Nature heals herself rapidly and soon presents a fresh green look.
National Recreation Areas are large sections of public land with superb scenic and outdoor recreational features. They are within easy reach by road of many people living in nearby major population centers. The main purpose in management of National Recreation Areas is to develop them for public use and enjoyment—while conserving scenic, historic, scientific, and natural history values.

Congress has designated a number of such areas on National Forest lands—Spruce Knob-Seneca Rocks in eastern West Virginia; Mt. Rogers in southwestern Virginia; Shasta-Trinity in northern California, and Flaming Gorge in Wyoming-Utah—while still others border on National Forest lands. Picnicking, camping, boating, sanitation, and other facilities are being built on these areas to accommodate visitors for outdoor relaxation and play.

Your interest may be bird study, or wildflowers, or collecting minerals and rocks, or picking wild huckleberries in season. For many people, the magnet is autumn color, the golden aspens of the Rockies, the red-and-gold maples of the Lake States, or the scrambled, multihued pink of the forests of the southern Appalachians.
The Government owns only a few of the almost 400 resorts on National Forest land, with a total one-time capacity of about 38,000 persons. All others belong to private concessioners who operate them under permits with the Forest Service regulating the type of developments, the character of services furnished, and the charges. Even the few resorts that are publicly owned are also operated by concessioners.

At many resorts in the National Forests, adequate accommodations are available at rates comparable to those charged for similar facilities on private land in the same area. Special services, such as saddle horses or boat rental, are, of course, additional. Besides resorts on National Forest lands, there are many accommodations at motels, dude ranches, and hotels on private lands within and adjacent to the National Forests. For information and rates, write the Chamber of Commerce in nearby cities, or the operator of the resort you have in mind.

**Recreation Residences Are in Limited Supply.** Many people ask if they can have a summer home in the National Forests for their individual family recreational use. Although some 18,000 private recreation residences now occupy sites on National Forests, no new sites are being established because of increasing public demands for other uses. In most localities, the desirable sites for summer homes have already been developed. New sites are still available, but only in Alaska and deep in a few western National Forests.

In the East, private land is heavily intermingled among public lands within the boundaries of National Forests and is usually available for recreation residences. On the public lands, however, particularly where there is a high demand for outdoor recreation, special-use permits for private recreation residences are not justified and are seldom granted. It has even become necessary, under certain circumstances where a greater public interest is involved, to arrange for the eventual cancellation of some permits to provide room for more public facilities.
Other Outdoor Interests Attract Visitors

Because the National Forests offer such an endless variety of scenic and natural attractions, visitors seldom run out of things to do.

Mountain Climbing. This is a most vigorous, fascinating, and at times dangerous outdoor sport. The urge to conquer high or precipitous mountains stimulates many people to take chances and forget safety rules. Don't climb a mountain alone. Join a mountain club, learn safe techniques, and get plenty of practice. File a climb plan at the nearest headquarters, so Forest Service officers can check your expected return.

Photography. If you are a "shutterbug" and love to photograph landscapes and people, the National Forests offer great opportunities to you. Among the scenic attractions for amateur and professional photographers are north Idaho's lake country, the Mackinac Island country of Michigan, the Colorado Rockies, the rugged Cascade Range skyline in Oregon and Washington, the picturesque Sierra Nevada mountains in California, the colorful cliffs of Oak Creek Canyon in Arizona, or the beautiful Cherokee National Forest in Tennessee.

"Rockhounding" and Nature Study. Geologists and amateur prospectors find especially fascinating the spectacular rock outcrops, fossil deposits, and caves in the National Forests. In some areas, special sites have been set aside for digging by rockhounds. Botanists study the strange Cranberry Glades of West Virginia, the exotic plants of the Oregon Coast, the Calaveras giant sequoias, or the tropical forest growth in the Caribbean National Forest, Puerto Rico. Archeological remains and cliff dwellings abound in the Southwest.
If you follow these neighborly rules, you'll protect yourself and others:

1. Read and obey signs and posters.
2. Observe State and Federal game and fish laws.
3. Keep the ground and water of your recreation site clean and free of pollution. Fish and clothes should not be cleaned in lakes or streams.
4. Please leave trees, shrubs, and flowers undamaged for others to enjoy. They make the area more attractive.
5. Tables, toilets, and shelters are expensive and are for your convenience. Don't cut initials or otherwise mutilate or destroy them—it only increases your tax bill, or reduces the recre- tional resource of your area and the Nation.
6. Observe caution in drinking water from streams. Even clean water may be polluted and dangerous to drink.

7. Don’t discharge firearms or fireworks on or adjacent to recreation areas—it is prohibited.
8. When camping away from improved areas, pack out all refuse that will not burn. Be extra careful with your campfire—be sure it is out when you leave it.

Campfires. Build them only in safe places—not against logs, brush, trees, or under overhanging limbs.

In regular camp and picnic sites, build fires only at designated places.

Outside of developed sites, be sure to scrape away all flammable leaves, pine needles, and duff to get on pure mineral soil.

Put your fire out—dead out—before you leave. Soak the coals, turn all sticks, stir, and soak again. Feel with your hands to see if the heat is gone.

Campfire permits are required in many National Forests. Be sure to check with the District Ranger before you enter an area.

Smoking. When driving through the forest, don’t be a “flipper.” Use your ashtray. In areas where smoking is permitted, don’t smoke when walking or riding through the forest. If necessary, stop for a “smoking break,” and dig a small hole in which to stamp out all smoking materials. Be sure your match, cigarette, cigar, or pipe heel is dead out before you discard it.

Fire seasons, dangers, and regulations vary widely with the climate and conditions of each part of the country. Learn the local regulations. In times of extreme fire hazard, certain areas will be closed to all use. Such closed areas are conspicuously posted.
Don't Get Lost!

Each year forest officers spend hundreds of man-days searching for lost persons, rescuing the injured, or recovering the bodies of people who have been killed. Most of those who get lost do so by straying off posted forest roads and trails or entering undeveloped areas without guides or proper maps. Injuries and deaths occur from inexperience in coping with woods or mountain hazards and from lack of proper equipment. Agonizing "lost in the woods" experiences, common injuries, and camper-caused fires can be avoided by:

Going to the forests properly equipped with local maps, shovel, ax, and bucket, stout shoes, warm clothes, and plenty of food;
Determining in advance where the nearest forest ranger or forest guard station is so that, in emergency, help can be called for without too much lost time;
Staying on signed forest roads and trails unless you know how to take care of yourself in isolated places;
Forming the habit of keeping oriented with the terrain as to direction of sun, landmarks, main lay of the land and minor variations, as you move through the woods. And above all, make sure someone knows where to look for you if you don't return.
If you do get lost, don't panic—remember, even the most skilled woodsmen get lost on occasion. Sit down a few minutes, get your breath, and calm down. Then survey where you are, decide on the best direction to go, and stay oriented with the sun or landmarks to keep to your plan.
Rest when you need to; don't overexert. If the country is hilly, traveling downhill is usually best. Avoid dangerous cliffs or steep slide areas where possible. A signal fire may guide searchers or keep you warm through the night, but be just as careful with this fire as with any other in the forest—it could get out of control. And don't forget that you will make it to civilization—if you think you can.
Remember: shelter, warmth, and water are important. You won't starve to death quickly, but exposure and cold in the mountains can kill. Find shelter—don't worry about food.

Ancient Bristlecone Pines: Inyo National Forest, Calif.
Groves of bent, twisted, wind-battered trees hugging the dry rocky slopes above 10,000 feet on the White Mountains. Oldest known living things on earth, several over 4,000 years. These along with many other features are explained and interpreted at modern Mammoth Visitor Center. About 20 miles east of Bishop, via U.S. routes 6 and 395.

Large, clear springs. Abundant fish, wildlife. Excellent swimming, canoeing, camping in pine forests. Between Ocala and DeLand off State Route 40.

Spectacular mountain scenery along 65-mile highway from Red Lodge to Cooke City, Mont., which crosses 11,000-foot Bear Tooth Pass, enroute to Yellowstone Park. Grasshopper Glacier contains frozen bodies of millions of grasshoppers. Large area preserved in primitive status. U.S. route 212 southwest of Billings.

Brasstown Bald: Chattahoochee National Forest, Ga.
Highest point in Georgia; fine view of southern Appalachians. Twin waterfalls. Tower and visitor center. Off State Route 17, 30 miles northwest of Clarksville; off U.S. Routes 76 or 19-129 near Blairsville.

Columbia River Gorge and Multnomah Falls: Mt. Hood National Forest, Ore.; and Gifford Pinchot National Forest, Wash.
High cliffs, spectacular waterfalls. Columbia River cuts through Cascade Mts. Interstate Route 80-N just east of Portland.

Botanical paradise of subalpine tundra and bog. Visitor center. Picnicking, camping. Go 6.5 miles west of Mill Point on State Route 39; 3 miles west on Forest Service Road 102.

Daniel Boone Country: Daniel Boone (formerly Cumberland) National Forest, Ky.
Immense natural stone bridges, waterfalls, wooded valleys. East and south of Winchester; take U.S. Route 60, State Route 15, or U.S. Route 25.

Campgrounds and trails at site of pioneer iron furnace. Scenic drive in Massanutten Mountains; views of Shenandoah River. Eight miles west of Front Royal on State Route 55 to Waterlick, then 3 miles south on State Route 678.

Harney Peak: Black Hills National Forest, S. Dak.
Camping, fishing, historical points nearby. Near Custer; 30 miles southwest of Rapid City, off U.S. Route 16.

Hells Canyon-Seven Devils Peaks: Payette and Nezperce National Forests, Idaho; Wallowa-Whitman National Forests, Ore.
Deepest river gorge on the American continent (more than a mile), over 22 miles long, steep slopes, formed by the Snake River, separating Idaho and Oregon. Fishing, hunting, hiking, mountain climbing. Very limited access.

Joyce Kilmer Memorial Grove: Nantahala National Forest, N. C.

Kancamagus Highway—Presidential Range: White Mountain National Forest, N. H.
Scenic 35-mile drive through part of northern Appalachian Mts., from Conway to Lincoln. To the north is the Presidential Range, "Backbone of New England," featuring Mt. Washington, highest peak in the Northeast; cog railway and auto toll road to summit; Great Gulf Wilderness; unusual rock formations, hiking trails, rock climbing, overnight huts, excellent fishing, waterfalls. Off State Route 16 or U.S. Route 302, south of Berlin.

Lava Butte Geological Area: Deschutes National Forest, Oreg.
Steep 500-foot cone with observatory on top, and surrounding area of solidified lava from very recent volcanic eruption (not over 1000 years ago). U.S. astronauts practiced their “moon walks” here, because of similarity of
terrain to the moon. U.S. Route 97 or State Route 31 from Bend, Redmond, or Sisters, Oreg.

Madison River Canyon Earthquake Area: Gallatin National Forest, Mont. Massive earth slide caused by earthquake in 1959 created a new lake along the Madison River, burying a highway and campground, and destroying buildings. The earth dropped about eight feet along a fault line. Visitor center interprets the phenomenon. Just west of Yellowstone National Park boundary; 92 miles south of Bozeman off U.S. Route 191.

Mendenhall Glacier: North Tongass National Forest, Alaska. One of largest glaciers in the world which is accessible by road. Massive face of deeply crevassed cobalt-blue ice nearly 1.5 miles wide, 100-200 feet high, 12 miles long. Circular observatory and visitor center gives year-round, all-weather view from across Mendenhall Lake formed by glacial melt. By road from Juneau.

Oregon Sand Dunes and Cape Perpetua: Siuslaw National Forest, Oreg. Outstanding 2,760-acre area of dunes up to 300 feet high along Pacific Ocean, near Reedsport, preserved in near natural condition. Up the coast about 45 miles along U.S. Route 101 is Cape Perpetua, on high cliffs where the forest meets the sea. Visitor center and overlook give dramatic view of the ocean. West of Eugene and Corvallis.

Pounds Hollow: Shawnee National Forest, Ill. Lake with camping, fishing, hiking, and interesting rock formation. State Routes 13 and 1, 30 miles southeast of Harrisburg.

Salmon River Country: Boise, Bitterroot, Challis, Nezperce, Payette, and Salmon National Forests, Idaho. Outstandingly rugged mountain region in central Idaho. Steep, deep river canyons, colorful Indian pictographs, wild water. Long sections passable only by float or jet boats. Middle Fork now a national Scenic and Wild River. North Fork called "River of No Return." Trail of Lewis & Clark winds through this region. Excellent fishing and hunting, backpack hiking. Very few roads penetrate this wild area, almost 1.5 million acres of which is protected as Primitive Areas.

Trail's End: Superior National Forest, Minn. Entrance to the Boundary Waters Canoe Area. Forty miles northwest of Grand Marais on Northshore Highway (U.S. 61) from Duluth. (See also list of Visitor Centers on p. 27; Wild and Scenic Rivers on p. 15; National Recreation Areas on p. 19; and list of National Forests and facilities, pp. 32-54.)
Note.—Write to the nearest Regional Forester (see p. 54) for up-to-date directories of recreation sites or to the Forest Supervisor for map folders and other detailed information. His headquarters are at the town named directly beneath each National Forest. Acreage figures below are rounded off; they change somewhat from year to year.

ALABAMA

William B. Bankhead National Forest (181,000 acres).

Conoehu National Forest (85,000 acres).

Talladega National Forest (360,000 acres).
Montgomery, Ala. Highways: US 78, 231; Alabama 5, 6. Attractions: South Sandy Wildlife Management Area; Skyway Motorway; Mount Cheaha, 2,407 feet, highest point in Alabama; Lake Chinnabee. Deer, turkey, duck, and squirrel hunting, bass, bream, and perch fishing; swimming at Cheaha State Park. Facilities: 5 camp and picnic sites, 11 picnic only; 3 swimming sites. Resort, hotel, and cabins at Cheaha State Park. Nearby towns: Anniston, Centerville, Hefflin, Marion, Selma, Sylacauga, Talladega, and Tuscaloosa.

Tuskegee National Forest (11,000 acres).

ALASKA

Chugach National Forest (4,723,000 acres).

Tongass National Forest (16,001,000 acres).
North Division—Juneau, Alaska. Alaska Highway to Haines, with road and ferry to Juneau, June 1—Nov. 1; also direct plane service to Juneau. Attractions: Rugged Alaska coast; hundreds of islands, fiords, snowcapped mountains above the sea; totems; territorial museum and Indian villages. Salmon canneries. Gateway to Canadian hinterland and Yukon, "Trail of '98" gold mines. Glaciers; "Ice Cap" back of Juneau; fiords of Tracy Arm. Admiralty Island. Trout fishing, also salt-water fishing for salmon and halibut. Hunting for Alaska brown and grizzly bear, mountain goat, and deer. Boating on lakes and inland waterways. Scenic wilderness trails; mountain climbing. Facilities: 95 camp and picnic sites, 14 picnic only; 1 swimming site; 2 winter sports areas. Hotel accommodations in all southeastern Alaska towns such as Juneau, Petersburg, Sitka, and Skagway; all of these are served by plane.

Tongass National Forest

South Division—Ketchikan, Alaska. Direct plane service to Ketchikan. Attractions: Fiords of Walker Cove and Ruderyd Bay of the Behm Canal, and Portland Canal. Trout fishing; salt-water fishing for salmon and halibut. Alaska brown, black, and grizzly bear, goat, and deer hunting. Totems. Indian villages. Salmon canneries; pulpmill. Boating on inland waterways. Facilities: 10 camp and picnic sites, 1 picnic only; 3 swimming sites; 1 winter sports area. Hotel accommodations in all southeastern Alaska towns, such as Ketchikan and Wrangell; all these served by plane.

ARIZONA

Apache National Forest (1,808,000 acres—partly in New Mexico).
Springerville, Ariz. Highways: US 60, 180, 666. Attractions: Scenic Coronado Trail and other drives through spruce and mountain-meadow country. Prehistoric Blue River cliff dwellings, Big Lake, Crescent Lake, Luna Lake, Blue Range Primitive Area; Mount
Baldy Primitive Area. Lake and stream trout fishing. Big-game hunting: elk, deer, bear, antelope; also turkey hunting. Horseback riding; pack trips, hiking. Facilities: 30 camp and picnic sites, 4 picnic only; boats without motors for rent on Big and Luna Lakes. Resorts and motels. Nearby towns: Alpine, Greer, and Springerville, Ariz.; Luna and Reserve, N. Mex.

Coronado National Forest (1,791,000 acres—partly in New Mexico).

Kaibab National Forest (1,720,000 acres). Williams, Ariz. Highways: US 66, 89, 64, 67. Attractions: Grand Canyon National Game Preserve with the famous North Kaibab deer herd, a wild buffalo herd and the only habitat of the Kaibab squirrel. Indian village in Havasu Canyon. Other points of interest are beautiful North Kaibab high country; pine, spruce, and aspen forests with open meadows; East Rim, North Canyon, Bill Williams Mountain, Whitehorse Lake, Cataract Lake, and Sycamore Canyon Wilderness. Hunting of deer, elk, antelope, bear, mountain lion, turkey, and limited buffalo. Scenic drives, fishing, riding pack trips. Photographic opportunities; wildlife and vivid geologic formations. Facilities: 8 camp and picnic sites, 1 picnic only. Motels, resorts, guest ranches. Hunting camps with groceries open in season. Nearby towns: Ashfork, Cottonwood, Flagstaff, Fredonia, Grand Canyon, and Williams, Ariz.; Kanab, Utah.

Prescott National Forest (1,249,000 acres).

Sicgreaves National Forest (811,000 acres).

Tonto National Forest (2,885,000 acres).

Phoenix, Ariz. Highways: US 60, 77, 80, 89. Attractions: Semidesert to pine-fir forests, elevations 1,500 to 7,300 feet. The lakes in the low country from an all-year haven in the desert; the cool pine forest along the Mogollon Rim are very popular in summer. Famous Mazatztal and Superstition Wildernesses, Pine Mountain Wilderness; Sierra Ancha Wild Area. Thirty thousand acres of manmade lakes including

ARKANSAS

Ouachita National Forest (1,570,000 acres—partly in Oklahoma).

Ozark National Forest (1,103,000 acres).

CALIFORNIA

Angeles National Forest (650,000 acres).

Pasadena, Calif. Highways: US 6, 66, 99; California 2, 39. Attractions: Steep, rugged mountains adjoining Los Angeles metropolitan area; Old Baldy, 10,000 feet. Chiefly a chaparral forest that serves as a watershed for the Los Angeles area and as an easily reached mountain playground for the area’s inhabitants. San Gabriel Wilderness. Scenic drives with wonderful views, especially of the city lights at night. Riding and hiking trails, skiing season, fishing and hunting, some swimming and boating. Facilities: 98 camp and picnic sites, 33 picnic only. (Because of extreme fire danger in southern California, no open campfires are permitted in this National Forest.) Boating and swimming; winter sports areas with ski lifts and other facilities. Resorts, cabins, pack and riding stables. Hotels and motels in Los Angeles and foothill towns. Calaveras Big Tree National Forest (350 acres—see Stanislaus).

Cleveland National Forest (395,000 acres).

Eldorado National Forest (653,000 acres).

Inyo National Forest (1,836,000 acres—partly in Nevada).

Bristlecone Pine Forest Botanical Area with many 4,000-year-old trees—the oldest living things on earth. Many wild granite peaks 12,000 to more than 14,000 feet in elevation. Mount Whitney, 14,495 feet, highest point in continental United States, and its closest approach road. Lake and stream fishing, deer hunting, wilderness trips. Dozens of natural lakes, some accessible by paved road up to 9,700 feet in elevation. Mammoth and Revered Creek recreation Areas. Facilities: 17 camp and picnic sites. Boating, swimming, winter sports. Resorts, motels. Nearby towns: Bishop, Independence, Leavining, and Lone Pine.

Klamath National Forest (1,699,000 acres—partly in Oregon).

Lassen National Forest (1,048,000 acres).

Los Padres National Forest (1,724,000 acres).

Santa Barbara, Calif. Highways: US 101, 99, 399; California 1, 166, 150, 178. Attractions: Undeveloped, rugged country, varying from lonely coast to semidesert, from brush to oak country to pine timber; elevations from near sea level to almost 9,000 feet; home of the rare California condor. Ventana Primitive Area and San Rafael Wilderness; snowcapped peaks in winter. Quail and pigeon hunting, some deer and wild boar hunting, trout fishing; scenic drives; oceanside camping, wilderness trips. Facilities: 325 camp and picnic sites, 22 picnic only. (Because of extreme fire danger in Southern California, no open campfires are permitted in this National Forest.) Swimming and winter sports areas including Kern County Ski Lodge. Hotels, cabins, and a few dude ranches. Nearby towns: Atascadero, Carmel, King City, Monterey, Ojai, Paso Robles, Taft, San Luis Obispo, Santa Barbara, Santa Maria, and Ventura.
