Backcountry Permits

A Backcountry Use Permit is required for all overnight trips in the backcountry. The permit is valid only for the dates, locations, and party size specified. Permits are not required for day hiking, however, day hikers must observe all backcountry regulations.

All Backcountry Use Permits must be obtained in person and not more than two days in advance of your departure. When you obtain your permit, you will receive important information on current trail and campsite conditions, hazards, and any restrictions or closures.

The key to a successful trip is careful planning and preparation. Please read this publication thoroughly. When planning your itinerary, keep in mind the time of year, difficulty of terrain, possible river crossings, closed areas, elevation changes, and the physical condition of everyone in your party. Remember you can only travel as fast as the slowest person in your group.

We recommend using topographic maps and reading a good hiking guide to assist you in planning.

Backcountry use permits have restrictions on group size, stock use, boating access, wood fires, and length of stay. (Campsite restrictions are listed on pages 6–11.) The maximum number of nights one can remain at a single site is three unless otherwise indicated. With the exception of four campgrounds, we allow only one party at each campsite. We recommend using topographic maps and reading a good hiking guide to assist you in planning.

Join the national Leave No Trace program (see page 12) in urging backpackers to keep campsite conditions, hazards, and any restrictions or closures.

Advance Reservations

Advance Reservations are held only until 10 AM on the day of your trip. If you are delayed, you may hold your reservation by calling the phone number shown on the confirmation notice. Reservations that have not been confirmed or exchanged for backcountry permits will be canceled and the campsites made available for other parties.

Only a portion of backcountry campsites will be reserved in advance. We leave some sites open in each area each night for people without reservations. Consequently, if you can be flexible in your choice of campsites, you may decide to wait until you arrive in the park to reserve your site(s) and obtain your permit.

We strongly encourage you to develop a second itinerary that may explore some less popular areas, in the event your first choice is not available. If you are camping with stock or requesting sites in one of our more popular areas such as Slough Creek or Yellowstone and Shoshone lakes, your chances of getting your first choices are best if you submit your request by April 1.

Please submit only one request per party per trip. Duplicate applications slow down the reservation process and may result in duplicate charges, overlapping itineraries, and unused campsites.

Where to Get Your Permit

For the best information on trail conditions, obtain your permits from the ranger station or visitor center closest to where your trip begins. From June through August, Backcountry Use Permits are generally available 7 days a week between 8 AM and 4:30 PM (some stations close for lunch) at the following locations:

- Bechler Ranger Station
- Mammoth Visitor Center
- Tower Ranger Station
- Grant Village Backcountry Office
- Bridge Bay Ranger Station
- Canyon Ranger Station/Visitor Center
- Old Faithful Ranger Station
- South Entrance Ranger Station
- West Yellowstone Visitor Information Center

Permits for boating trips must be obtained at Bridge Bay, Grant Village, or South Entrance backcountry offices. During the spring, fall, and winter, ranger station and visitor center hours may vary. To obtain a Backcountry Use Permit during these seasons, call (307) 344-2160 or (307) 344-7381.

Undesignated and Winter Camping

Camping in undesignated sites is occasionally allowed under certain circumstances and with special approval on a case-by-case basis. Strenuous policies govern this privilege, and adherence to Leave No Trace skills and ethics is required. Camping in designated campites is not required during the winter season. For more information about camping in undesignated sites and/or for a booklet about winter camping, contact the Central Backcountry Office at (307) 344-2160 or e-mail us at YELL_Backcountry_Office@nps.gov.
Hiking in Bear Country

Yellowstone Bear Management Areas

Eliminating human entry and disturbance in specific areas can prevent human-bear conflicts and provide areas where bears can pursue natural behavioral patterns and other social activities. Types of restrictions include area and trail closures, no-off-trail travel, a recommended size of party or four people, and travel limited to established trails or daylight hours. Check the campsite listings on pages 6-7 for restrictions that may apply to individual campsites. To reduce human related impacts on bears in high density grizzly bear habitat, we have established the following areas (see map page 3) and restrictions.

Firehole: Area (including Firehole Freigh Road and Firehole Lake Road) is closed March 10 through the Friday of Memorial Day weekend. The Mary Mountain Trail from the Nez Perce trailhead to Mary Lake is closed March 10 through June 15. Through travel from the Canyon trailhead is not allowed; however, travel is allowed from the Canyon trailhead to Mary Lake and back. Streamsides use is allowed from the point where Nez Perce Creek crosses the main road to a point one mile upstream along Nez Perce Creek.

Richard's Pond: Area is closed March 10 through the Fri of Memorial Day weekend. From the Saturday of Memorial Day weekend through September 30, Duck Creek, from the park boundary upstream to the Campanula Creek/Richard’s Creek fork, is open to streamside travel. The area upstream from Campanula Creek/Richard’s Creek fork is closed from March 10 through September 30.

Gneiss Creek: Area is closed March 10 through June 30. From July 1 through November 10, travel is allowed only on designated trails (off-trail travel is prohibited).

Gallatin: From May 1 through November 10, travel is allowed only on designated trails (off-trail travel is prohibited). A minimum group size of four or more is recommended for hiking and camping.

Blacktail: Area is closed March 10 through June 30.

Washburn: Area is closed August 1 through November 10. From March 10 through July 31, the area is open by special permit only. Contact the Tower Ranger Station for permit information.

Antelope: Area is closed March 10 through November 10. The Dunraven Road and related turnouts are open. From May 25 through November 10, foot travel is allowed on the Old Road Trail from Tower Falls Campground to the Buffalo Picnic Area.

Mirror Plateau: From May 15 through November 10, the area is open to day use only with the exception that from July 1 through August 14 overnight pumping is permitted for a combined total of 14 nights per summer.

Pelican Valley: Area is closed April 1 through July 3. From July 4 through November 10, the area is open to day-use only between the hours of 9 am and 7 pm.

Clear Creek: From April 1 through August 10, travel is only allowed on the east shore from Nine Mile trailhead to Park Point. Off-trail travel is prohibited. On August 11 all trails open and off-trail travel is permitted.

Clear Creek: From April 1 through July 14, travel is only allowed on the east shore trail from Park Point to Beavardam Creek. Off-trail travel is prohibited. Open campsites are SE2, SE3, SE4, and SE6 (no travel away from campground). All other campsites are closed. On July 15, all campsites open and off-trail travel is permitted.

Lake Spwan: From May 15 through July 14, no off-trail travel allowed and the Trail Creek Trail between Cabin Creek and Outlet Creek is closed. Open Campsites are 7L5, 7L6, 7L7, 7L8, 7M3, 7M4, 6A3, 6A4, and 6B1 (no travel away from campground). On July 15 all campsites open and off-trail travel is permitted.

Two Ocean: From March 10 through July 14, and August 22 through November 10, travel is allowed only on designated trails (off-trail travel is prohibited). From July 15 through August 21, a permit is required for persons wishing to travel away from designated trails. Contact the South Entrance Ranger Station for permit information.

Riddle/Solution: Area is closed April 30 through July 14.

Grant Village: Campground opens June 20 or earlier if bear use of the area spawning streams is over prior to that time. If bears are still frequenting the spawning streams after June 20, the campground loops adjacent to the stream(s) will remain closed until bear activity ceases. Campground closes October 16.

Heart Lake: Area is closed April 1 through June 30. Access to the area on July 1 may be delayed if conditions warrant.

Backpacking and Bears

To learn more about bears, read one of the numerous books that are available at visitor centers in the park or from the Yellowstone Association. It is quite reasonable to fear bears, but be aware that many bear stories are greatly exaggerated. Your chances of being injured on the way to Yellowstone are actually far greater than being injured by a bear. However, people have been injured and killed by bears in Yellowstone. Your safety is not guaranteed. Read the information below to learn good bear avoidance techniques and the proper actions to take if you encounter a bear.

Most attacks are caused by surprising a bear, getting between a mother bear and her cubs, or getting too close to a bear with food. The chances of being attacked by a bear can be reduced by avoiding the above situations and taking the following precautions:

- Be alert. Watch for tracks, excrement, diggings or other bear sign. Carry binoculars and scan ahead periodically. If you see a bear cub, the mother is close by.
- Don’t hike alone or at night. Bears travel (often on the trails) and feed mainly at dawn, dusk, and at night. Statistics show that parties of three or more are safer than solo hikers. Groups tend to make more noise and appear more formidable to a bear. Also, if there is an attack, members of the group can assist the injured while others go for help.
- Make noise. Talk, sing, clap your hands, shake pebbles in a can, anything to let a bear know you are present. Don’t rely on bells; usually they are too quiet. Shout often, especially when traveling upwind, near streams, or in thick brush.
- Stay on designated trails. You increase your risk of surprising a bear when hiking off-trail.
- Avoid carcasses. Never camp in a campsite that has a carcass nearby. It is very risky to approach a carcass; a bear may be out of sight guarding its food. Report dead animals near a trail or campsite to the nearest ranger station.
- Avoid bringing smelly food. A bear’s acute sense of smell can detect odors from great distances. Leave bacon, tuna, ham, scented deodorants and other odorous items behind. Dry foods are lighter to carry and not as aromatic.

If you encounter a bear:
- Stay calm
- Do not run or make sudden movements
- Back away slowly
- Talk quietly to the bear, do not shout
- Do not drop your pack
- Avoid looking directly at the bear

If you encounter a bear and it does not see you, keep out of sight and detour as far away as possible behind and downwind of the bear. Climbing a tree is a popular advice, but not always practical. All black bears, all grizzly cubs, and some adult grizzlies can climb trees if the spacing of the branches is right. Climb a tree only if the bear is far away, the tree is nearby, and one in which you can climb at least 15 feet. Running to a tree may provoke a bear to chase you. You cannot outrun a bear!

If the bear charges you, stand your ground and use bear spray if you have it. Some bears may bluff charge, then veer off or stop abruptly, allowing you to slowly back away. If the bear makes physical contact, drop to the ground, lie face down, and clasp your hands behind your neck. Your pack may shield your body. It may take all the courage you have, but lie still and remain silent. Resistance will only provoke the bear. Before moving, listen and look around carefully to make sure the bear is no longer nearby.

In exceptionally rare circumstances a bear may come to view humans as prey. This is often a hiker’s biggest fear, but this type of encounter is extremely rare. If you feel that a bear has been following you, be firm and aggressive, look big, yell, throw rocks or sticks, and use bear spray.

Night attacks on tents are extremely rare, but if this happens you should defend yourself aggressively. Any bear entering your tent at night doesn’t have good intentions; if it attacks fight back with any resource you have available to show that you are not easy prey.

Armed with the information above, we hope that you will have a safe and enjoyable experience in Yellowstone National Park.

Do You Know Your Bears?

A line drawn under the big toe across the top of the pad runs through the top half of the little toe on black bear tracks and through or below the bottom half of the little toe on grizzly tracks.

Food and Bears

Don’t let your actions cause a bear or other animal to be destroyed. A bear has an acute sense of smell. If you leave food out and unattended, you are inviting a bear into your camp. Just one incident of a bear obtaining human food may mean a dead bear. Why? A bear conditioned to human food is more likely to be aggressive and, subsequently, to injure or kill people in an attempt to obtain this easy source of food. When such a bear poses a risk of injuring someone, it is often necessary to destroy that bear.

Samples of odorous items which you are required to hang include all food, garbage, empty or full beverage cans, coolers, lip balm, sunscreens and lotions, toothpaste, food pans, horse feed, some medications, clothes worn while cooking, eating utensils which have not been properly cleaned, and any article that has an odor. Keep all food and odorous items out of sleeping bags, tents, and their stuff sacks.

Before starting a day hike or backcountry trip check at a Visitor Center or Ranger Station for any recent bear sightings or warnings. Look for posted warning signs at the trailhead. Report bear sightings or encounters to the nearest Ranger Station or Visitor Center.

Bear Pepper Sprays

The best way to avoid being injured by a bear is to take all the necessary precautions. However, if these measures fail and you are charged by a bear, your reactions can, in many cases, defuse the situation. Bear spray is a good last line of defense that has been highly effective in the reported cases where it was used. The use of bear spray is especially appropriate if you are attacked in your tent at night. If you successfully use pepper spray to stop a bear, leave the area immediately. The spray is effective for a short time and is less effective the second time around. Bear spray is effective only at distances of 10–30 feet and is adversely affected by wind, cold temperatures, and age. Carefully read the instructions, know how to use the spray and be aware of its limitations. Be sure to check the expiration date. If you decide to carry bear spray, the canister must be immediately available, not in your pack.

In choosing a pepper spray please consider the following: Purchase only products clearly labeled “for deterring attacks by bears.” Concentration should be between 1 and 2% capsaicin. The minimum net weight should be 225 grams or 7.9 oz. The spray should be delivered in a shotgun-cloud pattern at a minimum range of 25 feet and EPA approved.

Although bear sprays have been highly effective at stopping charging bears, there are some indications that the residue from some oil-based sprays may possibly act as a bear attractant. Use your spray only as a last ditch deterrent on the bear. Do not spray around your campsite, tent, camping gear, or in any bear habitat.

Recommended camp setup in bear country

A food storage pole is provided at most campsites, so that food and other attractants can be suspended. You need to provide your own rope (35 feet recommended).

- Suspend items 10 feet above ground and 4 feet out from tree trunks.
- In addition to food and garbage, suspend all odorous items including toothpaste, deodorant and lotion.
- Hang your food and odorous items at night and at any time which they are unattended or not being used.
- Keep a clean camp; remove any food scraps and trash from the fire pit. Pack out all trash.
- Don’t sleep in the same clothes worn while cooking.
- Store food in airtight containers.
- Keep your sleeping area at least 100 yards from the cooking and food-storage area.
- Strain food particles from dishwater and pack out. Scatter dishwater at least 100 yards from tent site.
- Never eat or store food in your tent.
- Sleep in a tent, not under the stars.
Trails and Trailheads

Maintained trails are marked by orange metal tags on trees and posts. Some trails may be hard to follow due to infrequent use, missing markers, recent fires, or large meadows where the trail tread is not clear. We strongly recommend that you carry a compass and topographic map and know how to use them. Distance and directional signs are at most trail junctions. Yellowstone has several designated loop trails, however, loops can be devised by combining several existing trails. Doing this generally requires some segments of backtracking or entering and exiting at different trailheads. Leaving a vehicle at one trailhead and coming out at a different trailhead requires two vehicles or a shuttle. For a list of licensed shuttle providers contact the Central Backcountry Office or go online to www.nps.gov/yell/planyourvisit/transbus.htm.

Parking is available at all trailheads. Overnight camping at trailheads is not allowed.

Where and When To Go

When planning your backcountry trip, remember that many of Yellowstone’s trails are more than 7,000 feet above sea level. Most areas have some snow until late May or early June, and some areas (especially mountain passes) are snow-covered until mid- to late July. In addition, many routes require fording rivers and creeks. In spring and early summer, some of the creeks and streams in the park may be 25 feet wide, 3–4 feet deep, extremely cold, and swiftly running. It’s hard to tell by the map whether or not a drainage stream, or river will be a raging torrent or merely a swollen creek.

Following is a breakdown of when many areas in the park are typically free of snow or standing water and can be reached safely (refer to campsite map on pages 6–11). To be sure that a route can be accessed at the time you plan to take your trip, call the Central Backcountry Office or talk to a ranger who is familiar with the area you plan to visit. Keep in mind when reading through the time progression that the listing is cumulative.

CDT The Continental Divide National Scenic Trail (CDNET) and the Nez Perce National Historic Trail (NPNHT) utilize parts of Yellowstone’s trail system. For further information on these trails, contact the Central Backcountry office.

Be Prepared

Weather in Yellowstone is Highly Unpredictable

Many warm, sunny days abruptly turn into fierce storms afternoons. Strong, gusty, south-to-southwest winds are common each afternoon in Yellowstone. Sudden high winds, rain, and lightning storms can follow. If you are hiking or boating when these storms approach, get off the water, shores, ridges, and open places. Thick forests of equal height offer better protection than meadows.

Backpackers in Yellowstone may be surprised to experience winter-like weather any time of year. Rain, wind, sleet, and snow can be deadly if proper precautions are not taken. Always bring rain gear and extra clothes for warmth. Nighttime temperatures can drop into the 30s and 40s. Depending on elevation, temperatures may even fall into the 20s with a light freeze in July.

Summer daytime temperatures are usually in the 70s and 80s. June can be cool and rainy; July and August tend to be drier, with afternoons thundershowers common. High water from spring runoff can make stream crossings hazardous and some trails wet and muddy until mid-July. Check current conditions before venturing into the backcountry.

Thermal Features and Geyser Basins

Burns from thermal features are a common cause of serious injury and death in the park. Following large animal tracks through geyser basins is no insurance of safety. Check at a ranger station before you go exploring; some areas may be restricted.

Early May: 1A, 1V, 1R and the lower 2H sites.
Mid-to late May: 3C2, 3C3, 3H1, the 25 sites.
Early June: 1B1, 1G sites, 2C1, 2C2, 2C3, OG1, OD sites, OA1, OA2, OA3.
Mid-to late June: WF1, WB and WC sites, 1C sites and 1F sites, 3P1, 4F1, 4C, 4D, 4E, 4G, and 4R sites, 8G1, Shoshone Lake sites (8Q6, 8Q2, 8R1, 8R4, 8R5, 8S1, 8S2), some of Yellowstone Lake except 7M4 shore sites and those closed for bear management, 5E sites, and most Old Faithful area sites except OEl.
Early July: 3P sites, 3A4, 3L, Lower 3M, 3T and 3U sites, 8M1, 8M2, 8Q1, 8R2, 8S4, 8S5, 8S7, 8T1, Heart Lake 8H sites (except 8H3) and 8J sites, 9U sites (Union Falls in Bechler area), WAI.
Mid-to late July: WD sites, WE sites, Fawn Pass and Electric Pass, 2V1, the trail connecting the 25 and 3P sites (Bliss Pass), 4M2, 4B and 4W (Wapiti Lake) sites, 4P1, Specimen Ridge trail, all Yellowstone Lake sites, 6B1, 6B4, 6C and lower 6D sites, 6M and 6Y sites, 8Q2, 8T3, 8T5, some 8B and 8C sites depending on the Snake River ford at 8K7, and 9A sites and 9B1–9B6 sites in the Bechler area.
August: Bighorn Pass, Yellowstone River fords south of Yellowstone Lake, 6T sites, 6B2, 6A4 by foot, 7G1, 7G2, the upper 6D sites and Eagle Pass, 9B7–9B9, 9D sites (Beccher River Canyon), 8P1, 8P2, OEl, most trails & campgrounds.

Only limited areas are accessible in May and early June. In general, you will encounter fewer closures, dry trails, lower stream crossings, and fewer mosquitoes if you travel later rather than earlier in the season. For your safety and pleasure, please plan your itinerary to avoid high elevations and major river crossings early in the season. Certain areas may be closed during the early season if conditions are considered unsafe. In addition, please review the list of Bear Management Areas on pages 2–3 for seasonal restrictions and closures.

Don’t approach or shortcut through geyser basins after dark when there is greater danger of stepping into a hot spring.

For your safety and for the protection of thermal features in Yellowstone, it is illegal to swim or bathe in any water that is entirely of thermal origin. Many springs and pools in Yellowstone are extremely acidic or very alkaline; only a small number are neutral. Many thermal features also contain algae, bacteria, and fungi that are found nowhere else in the world. Soaking or wading in the pools can destroy these delicate life forms. Altering the status of any thermal feature is prohibited. Please don’t put rocks, sticks, or any objects into them. Doing so may clog the vents and cause their extinction. Food and smoking are not allowed in thermal areas.

Be alert for bears in geyser basins in spring and early summer. Stock are not permitted in thermal areas.

Ticks and Mosquitoes

From mid-March to mid-July, grassy, brushy, low elevation areas (4,000–6,500 feet) are ideal tick habitat in Yellowstone. Wear repellent even on shoes, socks, cuffs, and pant legs. Tuck your pant legs into your socks and your shirt into your pants. Check your clothes and your body often.

During the summer season, mosquitoes are common and widespread around lakes and streams, especially in wet areas. They are most intense during June and July and tend to diminish in mid- to late August. Repellent, netting, and wearing clothing with long pants and sleeves are your best options. After that, patience and forbearance are required.

**Regulations**

The National Park Service is required by law “to preserve” park resources and the values and purposes for which the park was established, as well as “to provide for the enjoyment” of those resources and values by such means as will leave them “unimpaired for future generations.” You can help us by obeying the following regulations:

- Financial, cultural, or archaeological resources is prohibited.
- Digging a trench or leveling the ground is prohibited.
- Food, garbage, cooking gear, and other odoriferous items must be suspended at least 10 feet above the ground at night and when unattended.
- Carry out your trash, if you pack it in, pack it out.
- Bury human waste at least 100 feet from a water source, campsite, or trail. Putting items other than human waste and toilet paper in composting or pit toilets is prohibited.
- Bathing, soaking, or swimming in water entirely of thermal origin is prohibited.
- Polluting or contaminating any water source (with any soap, waste, food, etc.) is prohibited.
- Tossing, throwing, or rolling rocks or other items inside caverns, into valleys, canyons, or caves, down hillsides or mountain sides, or into thermal features is prohibited.
- Bicycles, wheeled vehicles (except wheelchairs), and operat-ing motorized equipment in the backcountry are prohibited.
- Feeding or intentionally disturbing wildlife is prohibited.
- Collecting or disturbing natural features, plants, rocks, ant-lers, cultural, or archaeological resources is prohibited.
- Impeding or disturbing horses or pack animals is prohibited.

**Interested in a guided trip?**
Visit www.nps.gov/yell/planyourvisit/concession.htm for a list of companies permitted to conduct overnight backcountry trips in Yellowstone.

**Campfires**

Open wood fires are permitted only in established fire rings at designated campsites. Use only dead and down wood which is wrist size or smaller so that it can be burned completely before you leave the campsite. Make certain the fire is cold before leaving your site. Restrictions may be in place due to dry conditions and forest fire danger. At some sites fires are not permitted any time of year; back-packing stoves are allowed at all campsites. Those sites which do not allow wood fires are specified with the initials NWF on pages 6-11.

**The Following are Prohibited in the Backcountry:**

- Firearms, weapons, traps and nets, pets, motorized equipment, wheeled vehicles, and hay are prohibited in the backcountry. We do allow wheelchairs and trained service animals in the backcountry.
- Due to personal safety concerns, please contact the Central Backcountry Office for further information before taking a wheelchair or service animal into the backcountry.

**Hypothermia**

Hypothermia is the major killer of unprepared recreationalists. It is the lowering of a person’s inner-core temperature, followed by rapid, progressive mental and physical collapse. Each year outdoor recreationalists die from it. Most of these deaths could have been prevented with prior knowledge and appropriate action. To avoid hypothermia:

- Stay dry, stay out of the wind, avoid getting chilled. Put on rain gear before you get wet and warm clothes before you start shivering. Use a hat and gloves to conserve vital body heat.
- When a person is wet, the body cools rapidly as moisture evaporates; a breeze increases the rate of heat loss dramatically. When clothes get wet, they lose much of their insulating value; cotton and synthetics; a breeze increases the rate of heat loss dramatically. When clothes get wet, they lose much of their insulating value; cotton and synthetic materials such as fleece lose the least and dry out quickly. Most hypothermia cases happen in air temperatures of 35-50 Fahrenheit.

Warning signs of hypothermia include uncontrollable shivering.

- Immobile, fumbling hands; slow, slurred speech; stumbling, staggering gait; exhaustion; memory lapses, incoherence, and drowsiness; and eventually coma. Be aware of the “denial syndrome” in which the victim negates any problems, “I’m OK, really!”

If you cannot stay warm and dry, and assess and alter your plans. Remember that you are only as strong as the weakest person in your group. Persistent or violent shivering is a clear warning that you are on the verge of hypothermia. Find shelter from the storm and make camp. Get out of wind and rain. Remove wet clothing. Get into dry clothing and a sleeping bag. Administer warm drinks. Never give alcohol.

**Emergency Communication & Cell Phones**

Cell phone coverage throughout the park is variable and intermitt-ent. Several different companies provide coverage, each in different areas. Your ability to transmit a call depends on your carrier and your location. Coverage in the backcountry is even more unpredict-able. Backcountry cell phones should not count on their cell phones as a reliable means of communication in case of an emergency. Satellite phones typically have better coverage, but even they are not 100% reliable due to varying satellite coverage.

Regardless of whether or not you carry a phone, all backcountry visitors should have a plan for what to do in case of an emergency. The best insurance for a safe and enjoyable trip rests with your ability to exercise good judgment, avoid unnecessary risks, and assumes responsibility for your own safety while in the backcountry.

**Camp Crossings**

Few of Yellowstone’s rivers or streams have bridges, and many are not fordable until July or later. Even in late summer, water levels can rise quickly after rainsstorms or from snowmelt in the high coun-try on warm afternoons. The water can be cold, fast, and more than thigh-deep, making any attempt to ford perilous. Trying to ford-deep, swift water has resulted in loss of gear, injury, and death. Carefully check your itinerary on a topographic map for stream crossings, and ask about ford conditions at a ranger station before beginning your trip. Don’t be afraid to turn around if conditions appear dangerous. Be fore you cross make sure all members (especially smaller members) of your party are comfortable with fording.

- During spring and early summer, stream depths are likely to change from morning to afternoon. Streams which can be crossed in the morning may rise and become dangerous to cross by afternoon as snow melts in higher elevations.
- Seal important items in plastic bags and put danging items inside your pack before crossing.
- Search up- and downstream to find the safest place to ford. You don’t have to cross where the trail meets the river. Wider sec-tions are generally slower and shallower.
- Do not ford barefooted, stay sideways to the current, and be aware of deceptive currents. Don’t look at moving water when crossing, keep your eyes on the opposite bank.
- Use a long sturdy stick to make your crossing safer. If you are part of a group, hold hands or interlock arms.
- Use extreme caution if you use a fallen tree or logjam, they can be very slippery and trap you if you fall.
- Under the waist and chest straps of your pack; a full pack could drag you down. If you fall while fording in deep water, release your pack and swim.

**Water Treatment**

Backcountry waters may look clean and refreshing, but con-taminants such as the microscopic protozoan Giardia lamblia may be present. Ingesting Giardia can cause Giardiasis, an intestinal dis-order which appears weeks after your trip. As a safeguard against Giardiasis, other parasites and bacteria, we recommend that you boil, filter, or chemically treat all drinking water. Any water brought to a boil, even at high altitudes, should be safe. For additional as-surance boil water for one minute. Filters should be capable of re-moving particles of 1 micron or smaller and stated as being effective against Giardia.
### Backcountry Campsites

- **Mallard Lake (area 1)**: This area is in the park boundary and not accessible by road.
- **West Thumb Geyser Basin Campgrounds**: All the park area campsites are not recommend for camping due to high visitation.
- **Midway Geyser Camps**: All the park area campsites are not recommend for camping due to high visitation.
- **Old Faithful Campgrounds**: All the park area campsites are not recommend for camping due to high visitation.
- **Lower Midway Campgrounds**: All the park area campsites are not recommend for camping due to high visitation.
- **Upper Midway Campgrounds**: All the park area campsites are not recommend for camping due to high visitation.
- **Yellowstone Lake (area 2)**: This area is on the park boundary and not accessible by road.

### Trailheads

- **Jackson Lake**: This area is on the park boundary and not accessible by road.
- **Mammoth Hot Springs Area**: This area is on the park boundary and not accessible by road.
- **Old Faithful Area**: This area is on the park boundary and not accessible by road.
- **Bison**: This area is on the park boundary and not accessible by road.
- **Winter (area 3)**: This area is on the park boundary and not accessible by road.
- **Grand Canyon of the Yellowstone (area 4)**: This area is on the park boundary and not accessible by road.
- **Canyon (area 5)**: This area is on the park boundary and not accessible by road.
- **Riverside (area 6)**: This area is on the park boundary and not accessible by road.
- **Hoodoo Geyser Basin**: This area is on the park boundary and not accessible by road.
- **Shoshone Falls**: This area is on the park boundary and not accessible by road.
- **Heart Lake**: This area is on the park boundary and not accessible by road.
- **Lava Creek**: This area is on the park boundary and not accessible by road.
- **Bison Camp**: This area is on the park boundary and not accessible by road.
- **Gros Ventre**: This area is on the park boundary and not accessible by road.
- **Kearns**: This area is on the park boundary and not accessible by road.
- **Langley**: This area is on the park boundary and not accessible by road.
- **Biscuit Basin**: This area is on the park boundary and not accessible by road.
- **Firehole River**: This area is on the park boundary and not accessible by road.
- **Upper McDonald Pass**: This area is on the park boundary and not accessible by road.
- **Biscuit Basin Trail**: This area is on the park boundary and not accessible by road.
- **Spotted Wolf Creek**: This area is on the park boundary and not accessible by road.
- **Lavender**: This area is on the park boundary and not accessible by road.
- **Blacktail**: This area is on the park boundary and not accessible by road.
- **Roe Creek**: This area is on the park boundary and not accessible by road.
- **Lava Creek**: This area is on the park boundary and not accessible by road.
- **Biscuit Basin Trail**: This area is on the park boundary and not accessible by road.
- **Spotted Wolf Creek**: This area is on the park boundary and not accessible by road.
- **Lavender**: This area is on the park boundary and not accessible by road.
- **Blacktail**: This area is on the park boundary and not accessible by road.
- **Roe Creek**: This area is on the park boundary and not accessible by road.
- **Lava Creek**: This area is on the park boundary and not accessible by road.
- **Biscuit Basin Trail**: This area is on the park boundary and not accessible by road.
- **Spotted Wolf Creek**: This area is on the park boundary and not accessible by road.
- **Lavender**: This area is on the park boundary and not accessible by road.
- **Blacktail**: This area is on the park boundary and not accessible by road.
- **Roe Creek**: This area is on the park boundary and not accessible by road.
- **Lava Creek**: This area is on the park boundary and not accessible by road.
Shoshone Lake

Shoshone Lake is a magnificent wilderness resource. It has primitive campsites, no road access, and only non-motorized boats may reach its waters. One of the park’s amazing geysers basins lies near the northwest shore. With the freedom to experience a thermal area without fences and boardwalks comes the responsibility to use great care to protect the fragile features and yourself. Remember that it takes only seconds to destroy what took nature hundreds of years to make, and that there is no 911 or rapid rescue in the backcountry. Please exercise consideration and caution.

Considering the beautiful qualities of this backcountry lake, it is no wonder that the campsites along its shores are occupied almost every night of the summer. In order to protect the vegetation, soil, water, wildlife, and delicate thermal features, and provide for the enjoyment of all the lake’s visitors, regulations are strictly enforced. Below are restrictions and recommendations specific to this area.

- Permits for boating parties must be picked up at the South Entrance, Grant Village, or Bridge Bay backcountry offices.
- Party size is limited to eight people per site. This helps alleviate disturbance to wildlife and other campers, reduce soil compaction, and cut down on the amount of human waste. Groups larger than eight must secure multiple sites and be prepared to cook and camp at their individual sites. They are encouraged to paddle together, but they may not congregate at a single site.
- Woods fires are not allowed. Past use of campfires and wood-gathering practices, combined with high levels of visitor use, caused significant and lasting impacts. Gas stoves, lanterns, and heaters are allowed. Charcoal fires are allowed in fire pans or grills elevated above mineral soil. All coals and ashes must be packed out.
- Maintaining an acceptable level of sanitation is a challenge in an area without fences and boardwalks comes the responsibility to use great care to protect the fragile features and yourself. Remember that it takes only seconds to destroy what took nature hundreds of years to make, and that there is no 911 or rapid rescue in the backcountry. Please exercise consideration and caution.
- Practice capsize recovery techniques with all party members prior to your trip.
- A U.S. Coast Guard approved personal flotation device (PFD) is required for each person on board and should be worn while on the water. PFDs should fit properly and be in serviceable condition. Children 12 and under are required to wear their PFD at all times.

All park rivers are closed to boating except the Lewis River Channel between Lewis Lake and Shoshone Lake where non-motorized boats are permitted.

Motor-driven vessels are permitted only on Lewis Lake, and most of Yellowstone Lake except in portions of the South, Southeast, and Flat Mountain arms. Boats too large to be carried can be launched only at Bridge Bay, Grant Village, and Lewis Lake boat ramps. Hand carried boats may be launched and removed at Sedge Bay. Towing water skiers and using jet skis are prohibited on park waters. Sailboat users should contact the Central Backcountry Office for more information.

Boat permits are required for all boats and float tubes. Permits can be obtained at any of the following locations: South Entrance, Lewis Lake Ranger Station, Grant Village Visitor Center, and Bridge Bay Marina. All motorized boats must be registered in the state of principle use. In addition, Canyon, Old Faithful, and Mammoth Visitor Centers provide non-motorized permits. Further information is available at www.nps.gov/yell/planyourvisit/boating.htm.

Boating

The leading cause of death in Yellowstone’s backcountry is cold-water (hypo-thermic) drowning. Over 100 people have lost their lives in the park’s cold lakes and streams. Water temperatures on Yellowstone, Lewis, and Shoshone lakes are in the 40s (Fahrenheit) in June, and the 60s by late summer. Survival time is minimal in the 40s (Fahrenheit) in June, and the 60s by late summer. Survival time is minimal in frigid waters. In addition, sudden strong winds can produce 3–5-foot waves. Boat-capsize accidents become frequent in storms subside in the late afternoon and evening. Take time to properly pack and balance your load; overloaded boats are dangerous and against regulations. Use dry bags rather than plastic bags to keep contents dry and provide flotation. A properly loaded boat may float if capsized, while an improperly loaded boat could sink if capsized. Always carry a bailing device, extra paddle, throw ring buoy and/or rope and a sound-producing device such as a whistle or air horn. Practice capsize recovery techniques with all party members prior to your trip.

A U.S. Coast Guard approved personal flotation device (PFD) is required for each person on board and should be worn while on the water. PFDs should fit properly and be in serviceable condition. Children 12 and under are required to wear their PFD at all times.
Yellowstone Lake

Yellowstone Lake is the second largest freshwater lake in the world that is above 7,000 feet. It encompasses 136 square miles, with 20-mile stretches of open water. Its 110 miles of shoreline provide access to some of the most beautiful wilderness in the park. There are only two backcountry trails near its shores, the Thorofare Trail along the east shore and the Trail Creek Trail which connects the Thorofare and Heart Lake Trails south of the South and Southeast arms.

Power boats can be launched from ramps at Bridge Bay and Grant Village. If the water is calm, boaters can reach the camps in a relatively short time. In keeping with the serene and wild nature of the arms, boasters must reduce their speed to a maximum of 5 miles per hour once they enter the South and Southeast arms. Additionally, the last 2 miles of the South, Southeast, and Flat Mountain arms are restricted to hand-propelled craft only.

Canoeing and kayaking on Yellowstone Lake is a memorable experience but not without its dangers. The water temperature during summer is typically 40–50°F Fahrenheit. Almost daily, sudden winds can create waves as high as 4–5 feet that are choppy and very close together, making it especially hazardous for small boats. Most commonly the winds are out of the southwest but at high altitudes and in thunder storms, the winds can shift at any time.

The ice on Yellowstone Lake normally does not leave until late May or early June. In addition to site-specific restrictions, some sites may be closed in the early season when lake levels rise and may flood sites.

Bears are frequent visitors along the lake and its more than 100 tributaries. Three Bear Management Areas have closures and restrictions on travel that are in effect until July 15. See pages 2 and 3 for details.

Yellowstone Lake is the home of the premier surviving inland cutthroat trout fishery in North America. To protect this exceptional fishery, the National Park Service has established special regulations. See the park’s fishing regulations and information on page 11 for further information.

Bears are frequent visitors along the lake and its more than 100 tributaries. Three Bear Management Areas have closures and restrictions on travel that are in effect until July 15. See pages 2 and 3 for details.

Yellowstone Lake is the home of the premier surviving inland cutthroat trout fishery in North America. To protect this exceptional fishery, the National Park Service has established special regulations. See the park’s fishing regulations and information on page 11 for further information.

Shuttle service on the lake for boaters and hikers is provided by Xanterra ParkExpeditions and Resorts from Bridge Bay Marina. For shuttle information and reservations contact Bridge Bay Marina at (307) 242-2883 (mid-May through mid-September) or Xanterra Transportation Department at (307) 344-5217.

www.nps.gov/yell/planyourvisit/backcountrytripplanner.htm
Campsites (continued)

Yellowstone River/ Hellroaring Creek Area

This trail is typically dry enough for hiking by mid-May. However, Hellroaring Creek remains too swift and deep to ford until August. When traveling to campsites 2H1, 2H3, 2H5, and 2H7 from trailhead 2K8, hikers must use the bridge north of campsite 2H7 to cross the creek. If the creek subsides, usually by mid-August, hikers might be able to ford southeast of campsite 2H3. Fords are dangerous, especially in high water, and not recommended. Also, during the spring and early summer, this area has a healthy population of ticks so hikers should take appropriate precautions. A report of current conditions is available at backcountry offices that issue permits. All the campsites along this trail system prohibit wood fires except 1A1–3, 2C1–3 and 2H9.

Heart Lake Area

Located at the base of Mt. Sheridan, Heart Lake is a popular destination with a much competition for the campsites along its shores in July, August, and early September. Campsites on the west shore have a limit of two nights per trip. A day hike up Mt. Sheridan is an option for hikers who have the time and energy. The hike to the summit is strenuous as the trail climbs over 2,700 feet in 3 miles. Of the five sites at the base of Mt. Sheridan only 8B2 and 8H3 permit fires.

The Heart Lake area is prime bear habitat and part of a Bear Management Area that does not open before July 1. Depending on trail and bear management conditions, the opening might be delayed a day or two. The Trail Creek Trail east of campsite 8O2 remains closed until July 15. Near the northwestern shore of the lake are several thermal areas one of which is home to Rustic Geyser. Use caution around all thermal areas where boiling water and unstable ground can cause serious damage to the feature. Along Heart and Snake rivers to the south and southeast of Heart Lake there are several significant river fords that are high, swift, and often impassable in the early season. In addition, there are two fords of the Snake River between the South Entrance and campsite 8B2. In a typical year, hikers should plan trips for after mid-July to minimize the chances of encountering dangerous ford conditions. Contact the Central Backcountry Office for current conditions.

Horsepacking

Plan Ahead

Traveling on horseback is a traditional and exciting way to see Yellowstone’s backcountry. Due to the limited number of campsites that allow stock we strongly suggest making an advance reservation if you’re planning an overnight trip with stock. In planning for your trip keep these things in mind:

• Prior to July 1 most park trails are closed to stock use due to range-readiness and wet conditions. Overnight trips with stock are not allowed before July 1. If you are planning an overnight trip or day ride contact the Central Backcountry Office for information on trail conditions, restrictions, and regulations pertaining to stock use.

• Stock users must possess proof of a negative Coggins test dates within the last 12 months for all equine stock entering the park. Be prepared to present a copy of the certification—signed by a licensed veterinarian—at an entrance station, when obtaining a backcountry permit, or in the backcountry.

• To prevent the spread of non-native weeds and grasses, hay is not permitted in the backcountry or at the trailhead. Stock trailers should be free of excess manure and all loose hay when entering the park. Certified weed-free hay is allowed in your trailer and the frontcountry, but must be bagged when entering the park. Processed, weed-free feed (hay cubes, pellets, oats, etc.) is allowed in the backcountry, but must be securely stored, per food storage regulations, when not in use. Spilled or leftover feed must be cleaned up and packed out.

• The only pack stock permitted in Yellowstone are: horses, burros, mules, ponies, and llamas.

• Take only enough stock to accommodate your party and equipment. Fewer animals make for less work, worry, and impact.

At the Trailhead and on the Trail

The only overnight boarding of stock in the park is at backcountry campsites. Stock may not be kept at trailheads or any of the roadside campgrounds overnight. Plan to arrive at the trailhead, pack up, and depart the same day. Call the Central Backcountry Office for information on campgrounds that allow stock outside of the park.

• Manure from around the trailhead, parking area, and hitch rails must be removed or scattered elsewhere before leaving on your trip.

• Keep stock off roadways, except at designated trail crossings.

• When approaching other parties on the trail, exercise caution and have your animals under control. Give the right-of-way when possible. If backpackers seem unsure of what to do, politely offer solutions for safe passage.

• Food or equipment caches are prohibited.

• All non-ridden stock must be led. Stock in excess of those needed for the trip are prohibited.

Managing Stock in Camp

Each backcountry campsite has a limit on the number of people and stock allowed per night. Consult the campsite list to find a site that will accommodate your stock and party size.

• Manure must be completely removed from the core camp, which is the area within a 100-foot radius of the fire ring or cooking area.

• Stock must be kept out of the core camp, except for short periods during packing and unpacking.

• Use care in water tank to prevent stream bank damage. Avoid soft or marshy areas.

• Stock in a manner that damages trees or vegetation is prohibited. If stock must be tied for a brief interval, use only mature or dead trees.

• If you picket stock, use only dead and down wood for picket pins and drag logs. We recommend that you carry picket pins and hobbles as part of your equipment. Locate picket sites well away from camp and at least 100 feet from the nearest water or trail. Rotate picket sites frequently to avoid overgrazing. Highlines should be used only for short-term retention, not for holding stock overnight. If you use one, be sure to pad the anchor trees and situate it well away from the core camp in an area where there will be minimal impact.

• Campsites and their surroundings must be returned to a natural condition before you leave. Remove picket pins and drag logs from meadows. Repair any trampled areas with a rake or shovel. Scatter (kicked) manure in stock retention areas.

Whatever retention method you use, it must be moved often enough to prevent damage to the resource. Even if you use an electric fence, you need to monitor and move it before resource damage occurs.

Fish Stock Regulations

For more information or for assistance in planning your horseback trip, call the Central Backcountry Office or go online to www.nps.gov/yell/planyourvisit/horse.htm

Fishing Regulations

Yellowstone National Park offers some of the finest trout fishing in America. But as important as fish are to anglers, they are even more important to the park’s native residents. Bald eagles, osprey, pelicans, otters, grizzly bears and other wildlife depend on fish for a major portion of their diet. Additionally, all fish are wild (there is no stocking), so populations must have sufficient numbers of adult fish to reproduce and maintain populations, and assure genetic diversity. Cutthroat, trout, grayling, and mountain whitefish—the native sport fish—are catch and release only in all park waters. More information is available at www.nps.gov/yell/planyourvisit/fishing.htm.

A current Yellowstone Fishing Permit is required. Anglers 16 years of age and older are required to purchase a three-day, seven-day, or a season permit. Anglers 12 to 15 years of age are required to obtain a non-fee permit. Permits are available at all ranger stations, visitor centers, general stores in the park, and many vendors in our gateway communities. State fishing licenses are not required in the park and are not a substitute for a Yellowstone Fishing Permit.

Fishing Seasons

With some exceptions, Yellowstone’s fishing season begins on the Saturday of Memorial Day weekend and continues through the first Sunday of November. Some exceptions to these dates are Yellowstone Lakes tributary streams and the Yellowstone River (above the falls), which are open July 15.

(continued on page 12)

www.nps.gov/yell/planyourvisit/backcountrytripplanner.htm
Plan Ahead and Prepare

- Know the regulations and restrictions for the area you visit.
- Prepare for extreme weather, hazards, and emergencies.
- Select terrain and mileage based on what you can handle.
- Schedule your trip to avoid times of high use.
- As you look through the campsite list in this planner, please note the party size limit that pertains to each campsite. If your group size exceeds these limits, you will need to camp and cook as smaller groups in separate campsites with separate permits.
- Repackage food to minimize waste.

Travel and Camp on Durable Surfaces

- To prevent erosion, avoid shortcuts and switchbacks.
- Walk single file in the middle of the trail, even when wet or muddy.
- Camp in designated campsites.
- Protect riparian areas by camping at least 100 feet from lakes and streams.
- Keep campsites small. Focus activity in areas where vegetation is absent. Avoid leveling the tent site.

Dispose of Waste Properly

- Pack it in, pack it out. Inspect your campsite and rest areas for trash or spilled foods. Never bury it or dump it in pit toilets. Pack out all trash, leftover food, and litter.
- To wash yourself or your dishes, carry water 100 feet away from streams or lakes and use small amounts of biodegradable soap. Scatter strained dishwater.
- Deposit solid human waste in catholes dug 6 to 8 inches deep at least 100 feet from water, camp, and trails. Cover and disguise the cathole when finished.
- Pack out toilet paper and hygiene products.

Respect Wildlife

- Do not approach wildlife. All wild animals are potentially dangerous. Observe wildlife from a distance. If your presence causes an animal to move away, you are too close.
- Never feed or harass animals. Feeding wildlife damages their health, alters natural behaviors, and exposes them to predators and other dangers.
- Protect wildlife and your food by storing rations and trash securely.
- Avoid wildlife during sensitive times: mating, nesting, raising young, or winter.

Minimize Campfire Impacts

- Campfires can cause lasting impacts to the backcountry. Use a lightweight stove for cooking and enjoy a candle lantern for light.

Exotic Threats

In 1994, the discovery of non-native lake trout in Yellowstone Lake caused great alarm among biologists throughout the Greater Yellowstone Area. Because of the lake trout’s history of displacing species such as cutthroat trout in other western lakes, an expanding lake trout population has ominous implications for the continued viability of the native cutthroat trout. Additionally, other species that depend on the cutthroat as a significant food source could be adversely affected.

Two other potentially damaging exotic organisms threaten Yellowstone’s fishery. Whirling disease has been implicated in the decline of numerous wild trout populations, and the New Zealand Mud Snail, which occurs in the Firehole and the Madison rivers, may harm aquatic insect communities. Please help prevent further spread of these invaders by thoroughly cleaning mud, plants, and debris from your fishing equipment, and inspecting footwear before leaving your angling site. Drain livewells and only clean fish in the same body of water in which they were caught.

Non-Toxic Fishing

Yellowstone National Park has implemented a non-toxic fishing program. Nationwide, over three million waterfowl die each year from lead poisoning through ingestion. Fishing tackle such as leaded split-shot sinkers, weighted jigs (lead molded to a hook), and soft lead-weighted ribbon for nymph fishing are no longer allowed.

Note: This copyrighted information has been reprinted with permission from the Leave No Trace Center for Outdoor Ethics. For more information or materials, please visit www.LNT.org or call 103.442.8222.

Developed by the National Outdoor Leadership School, the principles of Leave No Trace are an extension of the National Park Service mission to preserve a vast system of resources “unimpaired for the enjoyment of future generations” that challenge individuals to become active stewards in its preservation. The program builds awareness, appreciation, and respect for the land, and provides a foundation for applying minimum-impact techniques.

Leaving What You Find

- Where fires are permitted, use established fire rings, fire pans, or mound fires. Campfires are only permitted in specified campsites in designated fire rings.
- Keep fires small. Burn only small diameter dead and down wood. Do not break, cut or saw branches from any standing tree (dead or alive).
- Burn all wood and coals to ash, put out campfires completely. Fires must be completely extinguished before you leave the site.

Be Considerate of Other Visitors

- Respect other visitors and protect the quality of their experience.
- Be courteous. Yield to other users on the trail.
- Step to the downhill side of the trail when encountering pack stock.
- Take breaks and camp away from trails and other visitors.
- Let nature’s sounds prevail. Avoid loud voices and noises.

www.nps.gov/yell/planyourvisit/backcountrytripplanner.htm
