RANGER REPORTS
Forensic Evidence—Human Fatality along the Mary Mountain Trail of Yellowstone National Park on August 25, 2011

prepared by

Kerry Gunther, Wildlife Biologist (Bears)
Yellowstone National Park

January 12, 2012

A preliminary report of the DNA and forensic evidence from Wallace fatality was completed on November 25, 2011. That report contained results of all DNA analysis completed as of that date. On January 6, 2012, additional DNA results were completed and received from the laboratory. The following final report presents the new DNA results as well as all previous DNA and forensics evidence collected as part of the investigation. This report (January 12, 2012) supersedes the November 25, 2011 report.

Incident Summary

On the afternoon of August 26, 2011, two hikers reported to the Canyon Backcountry Office that they had observed a human body on the Mary Mountain Trail, approximately 5 to 6 miles (mi) or 8-9.7 kilometers (km) from the Canyon side of the Mary Mountain trailhead. The hikers reported that the body had been covered with duff. Ranger and Bear Management Office personnel from Yellowstone National Park flew by helicopter to an area west of the estimated fatality site and began hiking east on the trail looking for the body. There were tracks of a female grizzly with at least one yearling on the hiking trail approximately 1.6 km (1 mi) west of where the body was later found. At approximately 1800 hours the body of 59-year-old John Wallace of Chassell Michigan was located next to the Mary Mountain hiking trail, approximately 8 km (5 mi) from the trailhead (Figure 1). The victim was found lying on his left hip and back [UTM: 12T, 532599 E, 4941253 N (NAD 83)]. The victim’s feet were in the hiking trail with his body lying to the up-hill (west) side of the trail (Figure 2). The body had been partially consumed and exhibited canine bite wounds and other injuries consistent with a bear attack. There were defensive wounds on the victim’s arms and hands. Bruising associated with some of the wounds indicated that Mr. Wallace was alive at the time some of the wounds were inflicted. The body had been cached by a bear, there were bear tracks in the dust in the hiking trail adjacent to the body, and bear scats were found near Mr. Wallace and some of his possessions. A bear had cached the victim by scrapping up dirt, duff, and grass, as well as several of Mr. Wallace’s belongings (including his pack, rain jacket, heavy long-sleeved shirt, and lunch container), over the top of the body. Two water bottles (one empty and one ¾ full) were found near Mr. Wallace and some of his possessions. A partially eaten power-bar was found under the victim. The victim’s lunch had not been consumed and was still inside a closed plastic container inside a plastic bag. There was a blood spot in the dirt and a piece of cloth from the victim’s boxer shorts approximately 12.5 meters (m) or 13.6 yards (yds) southwest of the body. The blood spot and piece of cloth from
the boxer shorts appeared to be the location where the attack started, but this cannot be
determined for certain. A trail of matted-down grass led from the blood spot and piece of cloth
in a northeasterly direction to the body. Along the trail of matted-down grass lay a whistle, then
further northeast a hat and bandana, then the body. Two bear scats were found on either side of
the hat and bandana. Heavy rain and hail from Thursday afternoon (8/25/11) had obliterated all
but a few fresh tracks in the dust on the hiking trail. Two grizzly bear yearling size hind foot
impressions and one partial adult grizzly bear front foot impression were found in the trail a few
meters south of the victim’s feet. When found, Mr. Wallace was not wearing his daypack, and
the packs’ main compartment zipper and hip-belt buckle were both open, suggesting that he may
not have been wearing his pack when attacked. Two obvious bear trails (paths of matted-down
grass) led from the victim and through downfall to an area of lodgepole pine regeneration west of
the trail. The area around the incident site contained abundant bear foods including clover,
yampa, elk thistle, strawberry, and a bison carcass. The bison carcass [UTM: 12 T, 532870 E,
4941071 N (NAD 83)] was found approximately 330 m (360.9 yds) southeast of Mr. Wallace’s
body. There were 16 bear day beds around the bison carcass and one bear day bed in the
lodgepole pine regeneration above the body. The bison carcass was not visible from the hiking
trail and had not previously been reported to park personnel. There was also a second bison
carcass [UTM: 12 T, 535434 E, 4944112 N (NAD 83)] near Violet Creek approximately 2.4 km
(1.5 mi) from where Mr. Wallace’s body was found. Nine different grizzly bears including a
female with two cubs-of-the-year had been observed by a day-hiker at the Violet Creek bison
carcass on August 22, 2011, three days before Mr. Wallace was killed. The Violet Creek bison
carcass was reported by a park concession employee to park personnel several days after Mr.
Wallace had been killed. A photo provided by the concession employee showed 5 bears feeding
on the bison carcass, including what was likely the female grizzly known as the Wapiti sow and
her two cubs. Additional bears not visible in the photo, were reported to be near but not on the
carcass.

Subsequent investigation indicated that Mr. Wallace had arrived at the park by himself sometime
on Wednesday August 24, 2011. Mr. Wallace’s wife, who had stayed home in Michigan, stated
that she had talked to her husband over the phone on that evening. Several witnesses reported
seeing a man with a bright colored pack and driving a vehicle similar to Mr. Wallace’s, at the
Mary Mountain trailhead on the morning of Thursday, August 25, 2011. Mr. Wallace carried a
distinctive bright orange pack. The two hikers discovered Mr. Wallace’s body at approximately
1030 hours on Friday, August 26, 2011. After discovering the body, the hikers walked back to
the trailhead and reported what they saw to the Canyon Backcountry Office. Based on witness
accounts at the trailhead, the estimated time it would take an average hiker to hike 5 miles (at 2-
3 miles per hour), and the fact that Mr. Wallace had not yet consumed his lunch, the fatality
likely occurred sometime late in the morning on Thursday, August 25, 2011. The manner in
which extra camping gear, equipment, and trail guidebooks were stored in Mr. Wallace’s vehicle
indicated that he was an organized, well planned hiker. A conversation Mr. Wallace had with
the concession employee that checked him into the Canyon Campground indicates that Mr.
Wallace was knowledgeable about bears. Family members stated that Mr. Wallace was a
competent, experienced backcountry hiker and outdoorsman. It is not unusual for experienced
outdoorsman to understand and accept the risks associated with hiking alone in bear country.
Many hikers in Yellowstone National Park hike alone
Figure 1. Overview of the Wallace fatality site along the Mary Mountain trail in the Hayden Valley of Yellowstone National Park on August 25, 2011.
Figure 2. Sketch of Wallace fatality site along the Mary Mountain trail displaying the body location and other key evidence.
Forensic Evidence

Forensic evidence collected as part of the investigation included bear track measurements and bear bite wound measurements, as well as bear hair, bear scat, and bear saliva for DNA (genetic) analyses. Measureable tracks were found in the dust on the trail near the victim’s body on the day the body was recovered. New fresh bear tracks were found on the trail at the body cache site on the morning after the body was recovered. Partial but un-measureable bloody bear tracks were found on logs near the body. Canine bite wounds that could be measured were found on the victim’s back. Bear scats were collected near the victim’s body and possessions scattered near the body. Bear hair was collected from the victim’s body, from stabs on logs near the victim’s body, and from the soil of the cache pile on top, under, and immediately adjacent to the victim’s body. Saliva was swabbed from bite wounds on the victim’s body and clothing.

Bear tracks are not 100% reliable as a method for identifying individual bears. An individual bear can leave different sized track impressions depending on the type of substrate (sand, fine dirt, dust, hard packed ground, wet ground, mud, snow, etc.) the track impressions are left in. The bears’ gate (walking, running, loping, standing on two legs) and the amount of weight or pressure placed on each foot will also affect the size of the foot pad impression left on the ground. There is significant overlap in track sizes between bears of the same sex and age classes and some overlap between bears of different sex and age classes. Also, the actual foot pad measurements taken from captured bears often don’t match 100% with measurements of the foot pad impressions from the same bear left in dirt or mud, because the bear’s foot pad flattens out as an increasing amount of weight or pressure is placed on the foot as it strikes the ground.

Likewise, bite wounds are not a 100% reliable method of identifying individual bears because human skin is somewhat elastic. In addition, the amount of pressure of the bite determines how deep the canines penetrate the skin. Any movement by the bear (shaking of the head) or by the person being bitten (pulling away) can tear or stretch the skin and change the shape and distance between canine impressions left in the skin. As with tracks, there is significant overlap in bite wound impressions between bears of the same sex and age class, and some overlap between bears of different sex and age classes.

DNA from blood, tissue, hair, scat, or saliva is the most accurate method of identifying individual bears. However, DNA deteriorates under outdoor environmental conditions, especially wet conditions. Heavy rain and hail that occurred after the fatality likely deteriorated the condition of some of the DNA samples collected. Fire weather data indicate that the Canyon area received 1.4 inches of precipitation between 1400 hours on August 25th and 1400 hours on August 26th. Hair, scat, and saliva samples collected for DNA analysis were sent to two laboratories for analyses:

    Wyoming Game and Fish Wildlife Forensic and Fish Health laboratory
    Biological Sciences Building
    1000 E. University Avenue
    Laramie, Wyoming 82071
The Wyoming Wildlife Forensics Laboratory analyzed bear hair and saliva samples collected as part of the investigation. However, because the Wyoming Wildlife Forensics Laboratory does not specialize in DNA extraction from bear scats, all bear scats as well as subsamples of hair were sent to the Wildlife Genetics International Laboratory which has had a high success rate at extracting DNA from bear scats. The Wildlife Genetics International Laboratory also houses the Interagency Grizzly Bear Study Team (IGBST) DNA database for the Greater Yellowstone Ecosystem. The IGBST DNA database allowed comparison of the genotypes of bears present at the Mary Mountain fatality site to the genotypes of 619 known individual grizzly bears from the Greater Yellowstone Ecosystem to help identify the individual bear or bears involved in the fatality. The IGBST DNA database contains individual genotypes from most bears handled in Yellowstone National Park since the late 1990s.

**Bear Track Evidence Collected Prior to the Body Recovery**

**Hind Foot Track Width** - On Friday, August 26, 2011 at approximately 1805 hours, two grizzly hind foot tracks were observed in the dust on the hiking trail near the victim’s body. The hind tracks did not have the large wedge instep common to black bear hind tracks. The track width (metatarsal pad) measurements on both tracks were 10 centimeters (cm) or 3.9 inches (in). A 10-cm hind foot track width is consistent with a yearling grizzly bear, subadult grizzly bear, or small adult female grizzly bear. These tracks were too small to be from a large adult male grizzly bear. The tracks looked fresh and dimpling in the dust on the trail indicated that these tracks were made after the most recent rain/hail storm.

**Front Foot Track Width** - On Friday, August 26, 2011 at approximately 1805 hours, a partial bear front track (3 toes, 2 claws, and partial foot pad) was also found on the trail near the victim’s body. Though un-measureable, the toe and claw imprints were suggestive of an adult grizzly bear. This track looked fresh and dimpling in the dust on the trail indicated that this track was made after the most recent rain/hail storm.

**Bear Track Evidence Collected After the Body Recovery**

On Saturday morning, August 27, 2011, fresh grizzly bear cub tracks were found in the dust in the hiking trail near the site where the victim’s body had been cached, suggesting that a female with cubs may have returned to feed on the body. These tracks were left sometime after the body was flown out on Friday, August 26, 2011 at 2000 hours, and sometime before the arrival of the trapping team which was flown in on Saturday morning, August 27, 2011. The tracks led south up the trail from where the body had been cached. The front pad width of these cub tracks measured 7.8 cm (3.1 in) and the hind pad width measured 7.2 cm (2.8 in). Less distinct grizzly bear tracks with a pad width of 11-12 cm (4.3 - 4.7 in) were also observed on the trail. The larger tracks are consistent with an adult female grizzly bear, while the smaller tracks are consistent with a grizzly bear cub-of-the-year.

Another set of grizzly bear tracks of an adult plus at least one cub-of-the-year were found on a bear path heading from the victim’s body cache site to a day bed in an area of lodgepole pine.
regeneration west of the body cache site. These tracks consisted of mud and blood paw prints on top of logs lying on the ground. These were not complete tracks and could not be measured accurately. These bloody tracks indicated that a female with a cub or cubs had fed on or made contact with Mr. Wallace’s body.

In addition, a second path used by a bear was also found heading west from the victim’s body cache site. Evidence suggested that a bear ran from the body cache site toward the lodgepole pine regeneration. While running through the blow-down numerous dead limbs were broken from branches of logs lying on the ground. Partial bear tracks on some of the logs contained dried blood. Track size indicated a medium size adult grizzly bear. Bear hair was collected from a broken stabb on one of the logs and DNA analyses indicated that the hair came from a female grizzly bear. This hair did not match DNA from the bear scats found at the site, any of the genotypes in the IGBST DNA database, or the genotype of the female grizzly bear (Wapiti sow) involved in the human fatality along the Wapiti Lake trail earlier in the summer. The DNA from this hair was a DNA match with DNA from adult female grizzly bear #693 captured on October 4, 2011, 500 m (546.8 yds) from the fatality site. Adult female grizzly bear #693 was not accompanied by cubs, yearlings, or two-year-olds and had no previous capture history.

**Bite Wound Evidence**

*Upper Canine Width* - On Sunday, August 28, 2011, three canine bite wounds on the victim’s body were measured at the autopsy in Bozeman, Montana. The center-to-center distance of all three of the upper canine bite wounds on the victim’s back measured 60 millimeters (mm) or 2.4 in. Upper canine bite wounds of this size are too large to be from a mountain lion, wolf, or average-sized adult male or female black bear, and too small to be from a large adult male grizzly bear. A 60-mm upper canine width is consistent with an adult female grizzly bear, subadult male grizzly bear, or large adult male black bear. The upper canine puncture wounds were fairly small and somewhat rounded, suggesting that they were inflicted by a young adult bear and not by an old bear with extremely worn or broken upper canines.

*Lower Canine Width* - Three lower canine bite wounds were measured on the victims back. One of the lower canine puncture wounds tore the skin making the tooth impression less distinct and harder to measure. The centers of the lower canine punctures had to be estimated. The lower canine estimated center-to-center distances were 50 mm (2.0 in), 52 mm (2.1 in), and 55 mm (2.7 in). Lower canine bite wounds of this width size are too large to be from a mountain lion, wolf, or average-sized adult male or female black bear, and too small to be from large adult male grizzly bear. A 50-55 mm lower canine width is consistent with an adult female grizzly bear, subadult male grizzly bear, or large adult male black bear.

**Bear Saliva DNA Evidence**

Multiple bite wounds on the victim’s body and clothes were swabbed with swabs moistened with sterile water to collect saliva of the bear that attacked and/or partially consumed the victim. All of these swabs were non-reactive for DNA. Heavy rain and hail on Thursday afternoon which saturated the victims clothes may have contributed to deterioration of saliva DNA evidence.

**Bear Scat DNA Evidence**

The Wildlife Genetics International laboratory in Canada was able to get genotypes from two bear scats collected near Mr. Wallace’s body. Bear scat number #1 was collected next to the
victim’s hat and bandana and 4.4 m (4.8 yds) southwest of the victim’s body (Table 1). DNA from bear scat #1 indicated that it was from the adult female grizzly bear referred to as the Wapiti sow that had been captured on September 28, 2011. Bear scat #2 was collected next to the victim’s hat and bandana and 6.9 m (7.5 yds) west-southwest of the victim’s body. DNA from bear scat #2 indicated it was from the Wapiti sow’s blonde colored male cub captured on September 29, 2011. DNA from the female bear scat (bear scat #1) collected near the victim’s body matches DNA from both hair and scat from the Wapiti sow collected at the Wapiti Lake trail fatality incident site of July 6, 2011. DNA from the male scat (bear scat #2) did not match the genotype of the male bear scat collected at the Wapiti Lake trail fatality incident site, but was consistent with a sibling of that male bear. DNA from the scats of the female and male bears at the Wallace fatality site did not match any of the 619 bears in the IGBST DNA database and were therefore new bears with no known previous management or capture history.

Table 1. Distance in meters (m) of bear scats #1 and #2 from Mr. Wallace and his possessions along the Mary Mountain trail in Yellowstone National Park on August 26, 2011.

**Bear Hair DNA Evidence**

**Bear Hair Collected From the Victim’s Body and Clothes** – The Wyoming lab was only able to get a partial genotype from the bear hair collected from the victim’s body and clothes. Microscopic analysis confirmed the hair as being from a bear. Most of the hairs collected from the victim’s body and clothes were non-reactive (no DNA extracted). The partial genotype allowed identification of the sex of a bear that had contact with the victim’s body. The bear was a male. The partial genotype did not allow identification of the individual bear or bear species (grizzly or black). From this hair we cannot determine if this bear was an adult male, subadult male, yearling male, or male cub-of-the-year. Heavy rain and hail on Thursday afternoon which saturated the victim’s clothes may have contributed to deterioration of saliva DNA evidence.

**Bear Hair Collected From Soil of the Body Cache Site** – The hair collected from the soil on top of, under, and around the victim’s body was all non-reactive or turned out to be human hair. Heavy rain and hail on Thursday afternoon which saturated the victim’s clothes may have contributed to deterioration of saliva DNA evidence.

**Bear Hair Collected from Logs Along the Bear Trails Leading from the Victim’s Body** – The Wyoming and Canadian labs were able to get a complete genotype from one set of hair samples collected from a broken-off branch on a log along a bear path 20 m (21.9 yds) west of the victim’s body. The DNA indicates that the hair on the stau of this log was left by adult female grizzly bear #693 which was captured on October 4, 2011; 500 m (546.8 yds) from the Wallace fatality site. The DNA from this hair does not match the DNA collected from the bear hair (Wapiti sow’s hair) snagged on the eye glasses of the victim (Mr. Matayoshi) in the Wapiti Lake
trail fatality incident, and did not come from offspring of the bear involved in the Wapiti incident.

The Wyoming and Canadian labs were also able to get a genotype from bear hair collected from a staub next to a bear daybed approximately 150 m (164 yds) southeast of Mr. Wallace’s body. The daybed was associated with a bison carcass and may not be directly related to the fatality incident. The DNA from this hair is from a male grizzly bear. The DNA from this hair did not match the DNA from the hair collected from the staub 20 m (21.9 yds) from Mr. Wallace’s body, two bear scats found near the victim’s body, or bear hair snagged on the eyeglasses of the Wapiti Lake trail incident victim (Mr. Matayoshi). This bear was also not offspring of the bear involved in the Wapiti Lake trail fatality incident. The DNA from this male bear was a match with the genotype of a male grizzly bear in the IGBST DNA database. The hair in the database was collected remotely from a hair snare at Clear Creek on the east side of Yellowstone Lake during a research project in 2008.

Summary of Track Evidence Related to the Mary Mountain Incident

- Sometime after the last rain following the fatality and before Mr. Wallace’s body was located by park personnel at approximately 1800 hours on Friday August 26, 2011, a small adult female grizzly bear, yearling grizzly bear, or subadult grizzly bear left hind foot tracks in the hiking trail next to the victim’s body. The width of the hind foot tracks was 10 cm.
- Sometime after the fatality but prior to the body being removed, a female grizzly bear visited the body and left bloody tracks on logs heading west from the victim’s body cache site. Hair from this bear was snagged on the staub of a log approximately 20 m (21.9 yds) from the body cache site. DNA providing both an individual genotype and sex of the bear (female) was obtained from this hair.
- Sometime after the fatality but prior to the body being flown out, a female grizzly bear with at least one cub-of-the-year visited the victim’s body and left partial bloody paw prints on logs along a path leading from the body to the young forest regeneration to the west of the body cache site.
- Sometime after Mr. Wallace’s body was flown out at 2000 hours on Friday, August 26, 2011, and sometime prior to the arrival of the trapping team on the morning of August 27, 2011, a grizzly cub-of-the-year left fresh tracks in the dust on the trail next to the body cache site. The front tracks measured 7.8 cm (3.1 in) and the hind foot tracks measured 7.2 cm (2.8 in). These tracks match the foot pad measurements of the dark colored grizzly cub-of-the-year captured at the Wapiti trap site on September 29, 2011 (Wapiti sow’s dark colored cub).
- On September 22, 2011, yearling male grizzly bear #688 was observed along the Natural Bridge road. The bear’s tracks measured 10.0 cm (3.9 in) in the dirt, the same as the hind foot tracks found in the trail next to Mr. Wallace’s body on August 26, 2011, the day the body was found. A female grizzly bear with one large yearling and one small yearling was observed multiple times in Hayden Valley during summer 2011. Yearling male #688 is the larger of the two yearlings. The adult female and the smaller yearling were not captured during the fatality investigation. No DNA from grizzly bear #688 was found at the Wallace fatality site.
Conclusion: Based on track evidence, an adult female with cubs and an adult female with yearlings or a subadult or small adult female grizzly bear were present at the Wallace fatality site. Bloody cub paw prints indicate that an adult female with cubs likely fed on or made contact with Mr. Wallace's body.

Summary of Bite Wound Evidence Related to the Mary Mountain Incident

- As evidenced by canine bite wounds on the victim’s body, an adult female grizzly bear, subadult male grizzly bear, or large adult male black bear bit Mr. Wallace on the back. As evidenced by defensive wounds on Mr. Wallace’s hands and arms and bruising associated with some of the wounds on his body, Mr. Wallace was alive when the attack was initiated.
- Conclusion: Based on bite wound evidence, an adult female grizzly bear, subadult male grizzly bear, or large adult male black bear attacked Mr. Wallace.

Summary of DNA Evidence Related to the Mary Mountain Incident

- Based on bear hair collected from the victim’s body, a male bear of unknown age and species made contact with Mr. Wallace (Table 2).
- DNA from the bear known as the Wapiti sow (#2011030) captured on September 28, 2011, is a match with DNA from the female bear scat found along the suspected attack path approximately 4.4 m (4.8 yds) from Mr. Wallace’s body. DNA from the Wapiti sow is also a DNA match with the female bear scat collected at the Matayoshi fatality site. In addition, hair collected from the Wapiti sow is also a DNA match with grizzly bear hair snagged on Mr. Matayoshi’s eye glasses.
- DNA from the Wapiti sows’ blonde colored male cub (#2011032) is a match with DNA from the male bear scat found along the suspected attack path approximately 6.9 m (7.5 yds) from Mr. Wallace’s body.
- DNA from the Wapiti sows’ dark colored male cub (#2011031) is a match with DNA from the male bear scat found at the Matayoshi fatality site.
- DNA from adult female grizzly bear #693 captured on October 4, 2011 approximately 500 m (546.8 yds) from the Wallace fatality site, is a DNA match with the female grizzly bear hair found along a fresh bear path approximately 20 m (21.9 yds) from Mr. Wallace’s body.
- DNA from yearling male grizzly bear #688 captured on the Natural Bridge Road on September 21, 2011, and whose on the ground track size impressions matched tracks found in the trail at the Wallace fatality site, did not match with any DNA found at the attack site. Due to the considerable over-lap in track sizes between different individual bears, this yearling bear and its mother cannot be conclusively linked to the fatality site.
- DNA from one additional unmarked individual bear, a male, was collected approximately 150 m (164 yds) southeast of Mr. Wallace’s body. Based on DNA, this male bear is not related to either the Wapiti sow or female grizzly bear #693. This male bear hair was collected on a stub at a daybed associated with a bison carcass and therefore cannot be directly linked to the fatality incident. The DNA from this male bear was a match with the genotype of a male grizzly bear in the IGBST DNA database. The hair in the database was collected remotely with a barbed wire hair snare at Clear Creek on the east...
side of Yellowstone Lake during a research project in 2008. This bear is not currently and likely has never been captured or radio collared.

- **DNA Evidence Conclusion:** DNA evidence indicates that the Wapiti Sow (#2011030) and the Wapiti sows' blonde cub (#2011032) were both present at the Wallace fatality site and deposited scats there. By association, we can assume that the Wapiti sows’ dark colored cub (#2011031) was present as well. In addition, adult female grizzly bear #693 was also present at the Wallace fatality site. DNA from an additional grizzly bear, an unmarked male, from hair found at a daybed associated with a bison carcass near the fatality location cannot be directly linked to the fatality site. The male bear was never captured during the investigation.

<sup>a</sup>The Wapiti Sow is also the bear known (through DNA) to be involved in the Matayoshi Fatality on July 6, 2011. The Wapiti sow and her two cubs were captured and removed from the ecosystem on September 28, 2011.

<sup>b</sup>Adult female grizzly bear #693 was first captured on October 4, 2011, approximately 500 m (546.8 yds) from the Wallace fatality site. Grizzly bear #693 was radio collared and released on site pending results of DNA analysis.

<sup>c</sup>DNA match with bear hair collected from a barbed wire hair snare in the Clear Creek drainage on the east side of Yellowstone Lake during a research project in 2008.

<sup>d</sup>This bear has likely never been captured as a research or management bear and is known only from hair collected remotely from a hair snare during a research project.
Aerial Reconnaissance

In an effort to identify grizzly bears using the Hayden Valley area, nine reconnaissance flights were conducted during the 33 day period starting on August 27, 2011, the day after Mr. Wallace’s body was discovered, through September 29, 2011, the day the Wapiti sow’s cubs were captured. During reconnaissance flights over Hayden Valley, 30 bear sightings and/or radio locations (telemetry) of a minimum of 19 individual bears were documented. Individual bears in the Hayden Valley area included radio collared grizzly bears #155, #211, #281, #321, #394, #448, #481, #688, and #689. In addition, an ear-tagged lone adult female (possibly #205), and an ear-tagged adult female with two yearlings were observed. Six unmarked grizzly bears were also observed in Hayden Valley, including the Wapiti sow and her two cubs-of-the-year, one un-marked subadult grizzly bear, one unmarked average-size grizzly bear, and one large unmarked adult male grizzly bear.

Reconnaissance Flights

August 27, 2011 – Grizzly bears #448 and #481 were radio-located 9.5 and 3.4 miles, respectively, away from the fatality site.

August 30, 2011 – One unmarked subadult grizzly bear was observed 4.5 miles from the fatality site. Grizzly bears #448 and #481 were radio-located 9 and 6-7 miles, respectively, from fatality site. The Wapiti sow and 2 cubs-of-the-year were observed on a bison carcass with 4 wolves in the Sour Creek drainage.

September 2, 2011 – No bears were observed in the Hayden Valley area.

September 4, 2011 – Grizzly bear #155 was located in the Canyon area.

September 10, 2011 – Grizzly #155 was radio-located in Cascade Lake area, grizzly bear #281 was radio-located in Otter Creek drainage, and grizzly bear #394 was radio-located in the Mount Washburn area. An ear-tagged female (possibly grizzly #205) was observed in the Hayden Valley.

September 11, 2011 – An ear-tagged adult female grizzly bear with 2 yearlings was observed between Trout Creek and Elk Antler Creek in the Hayden Valley.

September 27, 2011 – Grizzly bears #155, 211, 281, 321, 394, 688, and 689 were all radio-located. One uncollared grizzly bear was observed in west side of the Hayden Valley. The Wapiti sow and her cubs were not observed.

September 28, 2011 – The Wapiti sow and her cubs were not observed. No bears were seen in the Hayden Valley.

September 29, 2011 – The Wapiti sow and two cubs, grizzly bear #321 and yearling #689, and one large unmarked grizzly bear were observed or located in the Sour Creek drainage.
Bear Trapping Operations

Bear traps were set at the fatality site of Mr. Wallace on Saturday, August 27, 2011, the day after Mr. Wallace’s body was discovered. Initial trapping operations at the fatality site used minimal bait to increase the chances of catching the target bear while minimizing the chances of luring bears that were not involved in the incident to the site. Later, traps were set over a larger perimeter to catch any bears in the area. Some trap sites were used primarily to attract large adult male grizzly bears away from other trap sites to increase the probability of catching females with young and subadults, the sex and age classes of the bears thought to be involved in the incident based on track and bite wound evidence. Bear trapping operations continued through the morning of October 16, 2011.

Traps were set at 10 different locations in the Hayden Valley area (Figure 3). In 173 trap-nights of effort, there were 25 captures of 13 individual grizzly bears. Five adult males, four adult females, 2 yearling males, and two male cubs-of-the-year were captured. Adult male grizzly bear #281 was captured six times, adult male #394 four times, adult male #211 three times, adult female #321 twice, adult female #448 twice, adult male #155 once, adult male #589 once, yearling male #688 once, yearling male #689 once, adult female #693 once, and the unmarked Wapiti female and her two male cubs-of-the-year were captured once each.

Bear Trapping Effort
Bear traps were set at the following locations in an effort to catch the bears involved in the Mary Mountain trail fatality:

- Alum Creek trap site: 12 trap-nights.
- Arnica Creek trap site: 1 trap-night, 4 bait-camera nights.
- Bridge Creek trap site: 5 trap-nights.
- Crater Hills trap site: 24 trap-nights, 1 bait-camera night.
- Grebe trap site: 30 trap-nights.
- Highland Springs trap site: 6 trap-nights.
- Mary Mountain fatality site: 15 trap-nights.
- Natural Bridge road trap site: 12 trap-nights, 13 bait-camera nights.
- Otter Creek trap site: 30 trap-nights.
- Wapiti trap site: 38 trap-nights.

Bear Captures
September 2, 2011 – Twenty-five year-old, adult male grizzly bear #155 was captured at the Otter Creek trap site. Weight = 191 kilograms (kg) or 421 pounds (lbs); upper Canine Width = 72 mm, lower Canine Width = 60 mm; front foot pad width = 16.0 cm, hind foot pad width = 14.0 cm. Grizzly bear #155 was first captured as a 2-year old in 1988 in a management action for killing sheep on the Targhee National Forest. The canine width and hind foot pad measurements of adult male grizzly bear #155 are inconsistent with (significantly larger than) the evidence found at the Mary Mountain fatality site. None of the DNA evidence found at the fatality site was from grizzly bear #155.
September 4, 2011 – Nineteen year-old, adult male grizzly bear #281 was captured at the Grebe Pit trap site. Weight = 243 kg (535 lbs); upper canine width = 72.5 mm; lower canine width = 70.9 mm; front foot pad width = 14.6 cm; hind foot pad width = 13.6 cm. Grizzly bear #281 was first captured as a 4-year-old in 1996 after killing sheep in Pindale, Wyoming. The canine width and hind foot pad measurements of adult male grizzly bear #281 are inconsistent with (significantly larger than) the evidence found at the Mary Mountain fatality site. None of the DNA evidence found at the fatality site was from grizzly bear #281.

September 4, 2011 – Fifteen year-old, adult male grizzly bear, #394 was captured at the Grebe Pit trap site. Weight = 230 kg (507 lbs); upper canine width = 72.5 mm; lower canine width = 70.0 mm; front foot pad width = 15.7 cm; hind foot pad width = 15.0 cm). Grizzly bear #394 was first captured as a 5-year-old in 2001 after killing sheep on the Bridger Teton National Forest. The canine width and hind foot pad measurements of adult male grizzly bear #394 are inconsistent with (significantly larger than) the evidence found at the Mary Mountain fatality site. None of the DNA evidence found at the fatality site was from grizzly bear #394.

September 6, 2011 - Adult male grizzly bear #281 was recaptured at the Grebe Pit trap site. Bear #281 was not handled and was released on site.

September 6, 2011 - Adult male grizzly bear #394 was recaptured at the Grebe Pit trap site. Bear #394 was not handled and was released on site.

September 7, 2011 - Adult male grizzly bear #281 was recaptured at the Grebe Pit trap site. Bear #281 was not handled and was released on site.

September 8, 2011 - Adult male grizzly bear #281 was recaptured at the Otter Creek trap site. Bear #281 was not handled and was released on site.

September 14, 2011 – Adult male grizzly bear #281 was recaptured at the Crater Hills trap site. Bear #281 was not handled and was released on site.

September 15, 2011 – Twenty-one year-old, adult male grizzly bear #211 was captured at the Grebe Pit trap site. Weight = 205 kg (453 lbs); all four canines heavily worn and broken; upper canine width = 68.5 mm; lower canine width = 55 mm; front foot pad width = 15.1 cm; hind foot pad width = 13.4 cm. Grizzly bear #211 was first captured inside Yellowstone National Park in 1993 after bluff charging park visitors near Mae West curve. The canine width and hind foot pad measurements of adult male grizzly bear #211 are inconsistent with (significantly larger than) the evidence found at the Mary Mountain fatality site. None of the DNA evidence found at the fatality site was from grizzly bear #211.

September 15, 2011 – Adult male grizzly bear #394 was recaptured at the Grebe Pit trap site. Bear #394 was not handled and was released on site.

September 16, 2011 - Adult male grizzly bear #211 was recaptured at the Otter Creek trap site. Bear #211 was not handled and was released on site.
September 16, 2011 – Adult male grizzly bear #394 was recaptured at the Otter Creek trap site. Bear #394 was not handled and was released on site.

September 17, 2011 - Adult male grizzly bear #281 was recaptured at the Sour Creek trap site. Bear #281 was not handled and was released on site.

September 19, 2011 - Adult male grizzly bear #211 was recaptured at the Crater Hills trap site. Bear #211 was not handled and was released on site.

September 21, 2011 – An unmarked yearling male grizzly bear (became bear #688) was captured at the Natural Bridge road trap set. Weight = 45 kg (100 lbs); upper canine width = 51.5 mm; lower canine width = 47.8 mm; front foot pad width = 10.5 cm; hind foot pad width = 9.4 cm. This bear was observed walking in the dirt along the Natural Bridge road on September 22, 2011 and its track prints were measured. The actual hind foot track impression left in the dirt measured 10.0 cm, the same size as the hind track found in the trail next to the victim’s body and measured on August 26, 2011. Track measurements are generally wider than the actual pad measurements because the pad flattens out when the animal places weight on its feet. A female grizzly bear with one large yearling and one small yearling were observed multiple times in Hayden Valley during summer 2011. Yearling male #688 is the larger of the two yearlings. The adult female and the smaller yearling were not captured during the investigation. Based on track size alone, this yearling (and by association his mother and sibling) cannot be ruled out as being present at the Wallace site. However, no DNA evidence linking this bear to the Wallace fatality site was ever found.

September 22, 2011 – Nineteen-year-old female grizzly bear #321 (and her unmarked male yearling) were captured at the Wapiti trap site. Weight = 122 kg (269.5 lbs); upper canine width = 65 mm; lower canine width = 55 mm; front foot pad width = 13.6 cm; hind foot pad width = 12.7 mm. Grizzly bear #321 was first captured as a research bear in Yellowstone National Park in 1998. None of the DNA evidence found at the fatality site was from grizzly bear #321.

September 22, 2011 – An unmarked male yearling (became bear #689) was captured at the Wapiti trap site along with his mother, bear #321. Weight = 49 kg (109 lbs); upper canine width = 50 mm; lower canine = 43 mm; front foot pad width = 10.5 cm; hind foot pad width = 10.4 cm. None of the DNA evidence found at the fatality site was from grizzly bear #689.

September 28, 2011 – On Wednesday evening, the unmarked adult female grizzly referred to as the Wapiti sow was captured at the Wapiti trap site. Weight = 113 kg (249.5 lbs); upper canine width = 58.0 mm; lower canine width = 52.9 mm; front foot pad width = 12.1 cm; hind foot pad width = 11.0 cm. The Wapiti sow was estimated to be 6-7 years old. DNA from the Wapiti sow matches DNA from the female bear scat found near some of Mr. Wallace’s possessions and 4.4 meters (4.8 yds) from his body. DNA evidence indicates that the Wapiti sow was responsible for the death of Mr. Matayoshi on the Wapiti Lake trail in Hayden Valley on July 6, 2011. The Matayoshi fatality site is approximately 13 kilometers (8.1 mi), straight line distance, from the Wallace fatality site. DNA from the Wapiti sow is a DNA match with hair snagged on Mr. Matayoshi’s eye glasses and from a bear scat collected at the Matayoshi fatality site. Although the Wapiti sow had never been previously captured and was not wearing a radio collar or ear-
tags, she was the only female with cubs-of-the-year known to be frequenting Hayden Valley during the spring and summer of 2011. The Wapiti sow was also easily recognized by the presence of one of her cubs which had a very distinctive blonde head. The Wapiti sow was primarily observed on the east side of the Yellowstone River in Hayden Valley, but was also observed a few times on the west side of the river (Figure 4).

**September 29, 2011** – On Thursday morning, the Wapiti sow’s blonde-colored male cub was captured in a trap at the Wapiti trap site. Weight = 20 kg (45 lbs); upper canine width = 42.8 mm; lower canine width = 35.8 mm; front foot pad width = 8.5 cm; hind foot pad width = 7.8 cm. DNA from this bear is a DNA match with the male bear scat found near some of Mr. Wallace’s possessions and 6.9 meters (7.5 yards) from his body.

**September 29, 2011** – On Thursday morning, the Wapiti sow’s dark-colored male cub was captured in a trap at the Wapiti trap site. Weight = 19 kg (42 lbs); upper canine width = 39.5 mm; lower canine width = 35.9 mm; front foot pad width = 7.8 cm; hind foot pad width = 7.2 cm. This bear’s track width measurements are consistent with tracks found on August 27, 2011 in the dust on the trail next to where Mr. Wallace’s body had been cached by a bear. DNA from this bear is a match with DNA from the male bear scat collected at the Matayoshi fatality site.

**September 29, 2011** – Nineteen-year old female grizzly bear #321 was captured at the Wapiti trap site. Her male yearling, grizzly bear #689, was present at the trap site but was not caught. Bear #321 was not handled and was released on site.

**October 2, 2011** – Nine-year-old, adult female grizzly bear #448 was captured at the Natural Bridge road trap site. Grizzly bear #448 was already wearing a radio collar (from a research capture in 2010) and was already in the IGBST DNA database. Thus, she was not handled and was released on site. Grizzly bear #448 was first captured as a research bear as a yearling in 2003. None of the DNA evidence found at the fatality site was from grizzly bear #448.

**October 4, 2011** – An unmarked, 8-10-year-old adult female grizzly bear was captured at the Highland Springs trap site and became bear #693. Weight = 141 kg (310 lbs); upper canine width = 65.0 mm; lower canine = 60.0 mm; front foot pad width = 12.3 cm; hind foot pad width = 12.3 cm. DNA from this bear was a match with DNA from bear hair collected on a bear path 20 meters (21.9 yards) from Mr. Wallace’s body.

**October 4, 2011** – Nine-year-old, female grizzly bear #448 was re-captured at the Arnica Creek trap site. Weight = 126 kg (277 lbs); upper canine width = 59 mm; lower canine = 58 mm; front foot pad width = 12.0 cm; hind foot pad width = 10.8 cm. None of the DNA evidence from the fatality site was from grizzly bear #448.

**October 4, 2011** – Nine-year-old, adult male grizzly bear #589 was captured at the Bridge Creek trap site. Weight = 167 kg (368 lbs); upper canine width = 69.5 mm; lower canine = 65.7 mm; front foot pad width = 13.5 cm; hind foot pad width = 12.5 cm. The canine width and hind foot pad measurements of adult male grizzly bear #589 are inconsistent with (significantly larger than) the evidence found at the Mary Mountain fatality site. None of the DNA evidence found at the fatality site was from grizzly bear #589.
Conclusion

On August 26, 2011, the partially consumed and cached body of 59 year-old Mr. John Wallace was found in Hayden Valley next to the Mary Mountain trail. Wounds found on Mr. Wallace’s body were consistent with a bear attack. Hayden Valley contains abundant bear foods and is known to have a high density of grizzly bears. Black bears are rarely observed in Hayden Valley. The autopsy indicated that Mr. Wallace had been in good health prior to his death. Defensive wounds on the victim’s hands and arms, as well as bruises associated with bite wounds on his body, indicate that Mr. Wallace was alive when attacked by the bear. His good health combined with the presence of defensive wounds and bruising associated with bite wounds, rules out the possibility that he died from natural causes and was later scavenged by bears. A bison carcass surrounded by 16 bear day beds was found 330 m (360.9 yds) southeast of the body. A second bison carcass located approximately 2.4 km (1.5 mi) from the body was being scavenged by at least nine different grizzly bears on August 22, 2011, three days before the attack on Mr. Wallace. Photo evidence indicates that the female grizzly bear known as the Wapiti sow and her two cubs were feeding on that bison carcass on August 22, 2011. DNA evidence indicates that the Wapiti Sow (#2011030) and the Wapiti sows’ blonde cub (#2011032) were both present at the Wallace fatality site and deposited scats there. By association, the Wapiti sows’ dark colored cub (#2011031) was likely present as well, as cubs are usually accompanied by their mothers. Bloody cub tracks at the site indicate that a female with cubs had likely fed on Mr. Wallace’s body. In addition, DNA evidence from hair indicates that adult female grizzly bear #693 was also present at the Wallace fatality site. DNA from an additional grizzly bear, an unmarked male, from hair found at a daybed associated with a bison carcass near the fatality location cannot be directly linked to the Wallace fatality site, but cannot be completely ruled out either. The male bear was not captured during the investigation. In addition to the presence of four individual bears based on DNA evidence, tracks found in the trail near the body on August 26 suggest that a subadult grizzly, independent yearling grizzly, small adult female grizzly (track size smaller than #693), or a female grizzly accompanied by one or more yearlings, were also present at the Wallace attack site. Unless weaned early, yearling grizzly bears are usually accompanied by their mothers. No DNA evidence of these bears was found at the site.

The roles that the Wapiti sow and adult female grizzly bear #693 played in the Wallace fatality and/or consumption of his body are not known, although it is likely, based on the presence of their scats and the bloody cub paw prints, that the Wapiti sow and her cubs scavenged on the body. Given the large number of bears that were utilizing nearby bison carcasses, DNA and track evidence suggesting that several bears were present in close proximity to the fatality site, and the lack of an eyewitness, it is not possible to precisely determine the identity of the bear or bears responsible for the death and/or consumption of Mr. Wallace.

Figure 4. Observations of the female grizzly bear with two cubs-of-the-year known as the Wapiti sow, Hayden Valley area, Yellowstone National Park, 2011.
Acknowledgements

Dave Page, Justin Ivary, Matt Vanzura, Kyle McDowell, and Kerry Gunther conducted the initial investigation of the fatality site on the night the body was found. Dave Page, Pat Navaille, Travis Wyman, and Craig Whitman, conducted follow-up investigation of the fatality site the next day. Craig Whitman, Travis Wyman, Lynn Clarke, John Carnes, and Jonathan Ball conducted roadside and helicopter assisted backcountry trapping operations. Chad Dickinson, Seth Thompson, Travis Wyman, and Doug Blanton conducted horse-assisted backcountry trapping operations. Pilots Dave Stradley and Steve Ard along with observers Travis Wyman, John Carnes, Doug Blanton, Dan Stahler, and Josh Irving conducted aerial reconnaissance flights. Colette Daigle-Berg, Bonnie Whitman, and Kerry Gunther collected forensic evidence at the autopsy. Bonnie Whitman, Craig Whitman, and Kerry Gunther sifted through the soil and debris from the body cache pile for bear hair. Mark Haroldson of the Interagency Grizzly Bear Study Team made his staff available for all aspects of the investigation and trapping operations. Kevin Frey provided tooth measurements from skulls of different bear, wolf, and mountain lion sex and age classes for bite wound comparisons. Tyler Coleman assisted with preparation of scat samples for shipment to the laboratories. Mark Bruscino and his staff relayed DNA samples to the Wyoming Wildlife Forensics Laboratory. Nick Herring flew DNA samples to the Wyoming Wildlife Forensics Laboratory. Chris Servheen and Wayne Kasworm assisted with getting DNA samples to the Wildlife International Genetics Laboratory in Canada. Kimberly Frazier of the Wyoming Game and Fish Wildlife Forensics Laboratory conducted DNA laboratory analysis of bear hair and saliva samples and gave up her weekend to complete DNA analysis in a timely manner. Leanne Harris of the Wildlife International Genetics Laboratory conducted DNA analysis of bear scat and hair samples. Wendy Hafer and her staff provided helicopter operations assistance. Many other people assisted with all aspects of the investigation.

**Nature of Incident**: Fatality Investigation

**Reclassification of Incident**

**Summary**:
On August 25, 2011, subsequent to receiving a report from visitors of a deceased male body near the Canyon Village side of the Mary Mountain Trailhead, a male identified as John Wallace was located adjacent to the trail approximately six miles from the Canyon Village trailhead in the Hayden Valley. Investigations and autopsy results showed Wallace died due to injuries sustained from by a grizzly bear attack. Evidence collected on-scene included hair and scat samples that were transferred to the park Bear Management Biologist for DNA forensic analysis.

**Narrative**:
On August 26, 2011, at approximately 1630 hours, I received a report of a body found in the Canyon District in Yellowstone National Park. Snake District Ranger Matthew Vandzura requested that I respond from Grant Village to assist in the investigation. I responded and when I arrived at the Canyon Ranger Station Incident Command Post, I was briefed by Special Agent Dan Kirschner and Operations Chief Ranger Boone Vandzura. I was then assigned lead of investigations.

**Initial Report**:
Ranger Boone Vandzura informed me that a father and daughter had observed a deceased male body on the Mary Mountain Trail approximately six miles from the Canyon Trailhead earlier in the day. Ranger Boone Vandzura stated a helicopter was already on-route to bring an on-scene team to the reported location on the Mary Mountain Trail to investigate. Ranger Boone Vandzura identified the on-scene team to consist of: District Ranger Matthew Vandzura, Ranger Dave Page, Ranger Kyle McDowell, Bear Management Biologist Kerry Gunther and Special Agent Justin Ivary.

A green Jeep Cherokee, bearing Michigan registration, was located at the trailhead of the Mary Mountain Trail on the Canyon Village side. This was the only vehicle unaccounted for from both sides of the trail (Old Faithful and Canyon Village). Ranger Chris Flesch informed me that the Jeep had been parked at this location for over 24 hours, a violation of day use restrictions on in Hayden Valley. Ranger Chris Flesch stated he observed the Jeep at the trailhead on the afternoon of August 25, 2011. Dispatch notified me that the Jeep was registered to John Wallace. A check with Canyon Village Campground Xanterra employees showed that Wallace was currently registered in the campground at site D82. Ranger Mark Plona checked this site but could not locate any occupants. The occupants of adjacent campsites surrounding D82 informed Ranger Mark Plona that they had not seen anyone at site D82 for a day.

**Scene Investigation**:
At approximately 1800 hours on August 26, 2011, the on-scene team notified me that they located a deceased male body on the Mary Mountain Trailhead. The area of the body located by the on-scene team was consistent with the reported location and general description given by the reporting party.

The on-scene team stated the male body they located matched basic features of a picture of Wallace’s Michigan driver’s license (provided by Yellowstone National Park Dispatch). The on-scene team also informed me that they located a key to a Jeep in the pants pocket on the body. The on-scene team informed me that the body had...
been partially consumed by an animal and partially buried (by approximately two inches of dirt). Special Agent Justin Ivery informed me that the on-scene team did not observe any bears in the area, but that they had observed bear tracks, bear scat and hair near the body. Special Agent Justin Ivery stated he completed the on-scene investigation with Ranger Dave Page. The body was collected in a body bag and flown to a prepared landing zone near the upper falls in Canyon Village. The body was then transported to Canyon Maintenance Yard and held by Assistant Park Coroner Ranger Colette Daigle-Berg and Ranger Amanda Wilson. Assistant Park Coroner Ranger Dennis Lojko assisted Ranger Colette Daigle-Berg.

Subject Investigation:
Special Agent Dan Kirschner, Ranger Dennis Lojko and I contacted Assistant United States Attorney Lee Pico and advised him of the situation. AUSA Pico advised me to impound the Jeep and inventory it per park policy. Ranger Thomas Mazzarisi and Ranger Katie Trewick impounded the vehicle (towed from Mary Mountain Trailhead to the Canyon Maintenance area by Canyon YPSS (Yellowstone Park Service Station)) and completed an inventory of the vehicle. Items located inside the Jeep showed that Wallace had entered the East Entrance of Yellowstone National Park after passing thru Cody, WY on August 24, 2011, at 0745 hours. Other items inside included: Park entrance ticket, 2008 Yellowstone Trip Planner, 2009 entrance ticket, park map, Backcountry reservation 2009, Xanterra Campground reservation 2011, Yellowstone Backcountry trip planner, 2009 Yellowstone newspaper, 2011 Yellowstone newspaper and Falcon Guide Yellowstone hiking book with hikes marked on the routes in ink, including the Mary Mountain Trail (Alum Creek and Nez Perce Creek). The key located in the pants pocket on the body opened the door and started the engine of the Jeep registered to John Wallace that was parked at the trailhead.

I contacted Yellowstone National Park East Entrance Supervisor Dennis Lenzendorf and asked him to review the entrance camera video located at the entrance booths for August 24, 2011, at 0745 hours. Dennis Lenzendorf informed me that after he reviewed the entrance video, he observed a Jeep matching the one observed at the Mary Mountain Trailhead registered to Wallace. Dennis Lenzendorf indicated that based on the video, the Jeep entered the east entrance to the Yellowstone National Park on August 24, 2011, at 0753 hours. Dennis Lenzendorf stated that the video showed a white male in his 50's matching the general description of Wallace operating the Jeep. Dennis Lenzendorf stated the video did not show anybody else in the vehicle.

Assistant Coroner Ranger Colette Daigle-Berg informed me that she positively identified the body located to be John Wallace, based on the totality of information she had. Ranger Colette Daigle-Berg informed me that the Michigan State Police assisted her in notifying Wallace’s next of kin late Friday night (early Saturday morning on August 27, 2011).

On August 27, 2011, I assigned Rangers Mark Plona and Dennis Lojko to interview Canyon Village Campground personnel. Ranger Dennis Lojko interviewed on August 31, 2011, works in the Campground Registration Desk for Xanterra Parks and Resort and she remembered checking Wallace into the Campground on August 24, 2011. stated Wallace informed her that he was a grizzly bear expert and did not want to hear the “Bear Speech” given to all campground registrants concerning
being in grizzly bear country. [REDACTED] stated that she gave Wallace the “Bear Speech” anyway and checked Wallace in as normal. Ranger Dennis Lojko showed [REDACTED] a picture of Wallace. [REDACTED] stated this was the person she had checked in (see witness statement).

Evidence Investigation:
Special Agent Justin Ivary stated he had recovered a digital camera during his initial on-scene investigation that belonged to Wallace. Special Agent Justin Ivary stated he obtained permission from [REDACTED] to collect and examine any pictures on the camera. After reviewing this camera, I identified three pictures taken in the northern end of Hayden Valley near the Mary Mountain Trailhead. These pictures showed cloud cover and the open field of the valley. The internal date on the camera was not set. I submitted these pictures to then National Oceanic Atmospheric Administration (NOAA) master forecaster Kelly Allen (phone 307 857-3898) from the Riverton, Wyoming field office for analysis for a possible time frame based on the clouds in the pictures. Kelly Allen stated that based on the cloud cover, she believed the pictures were taken on the morning or evening of Thursday August 25, 2011.

I assigned Ranger Eric Kelsey to document bear signage and brochures offered to visitors entering Yellowstone National Park thru the East Entrance from Cody, Wyoming along Rt. 14/16/20/North Fork Highway. Ranger Eric Kelsey completed this task and collected brochures in this area on September 5, 2011 (submitted into evidence).

I contacted Yellowstone National Park, Tower Backcountry office to locate a signed hardcopy of the backcountry permit issued to Wallace in 2009. They were only able to provide an electronic copy as all hard copies from 2009 were shredded in the spring of 2011 (as normal operating procedure) (see Wallace backcountry permit 2009).

I also contacted the Grant Backcountry Office concerning paperwork from inside the Jeep that indicated Wallace obtained a backcountry permit in 2007. Grant Backcountry Office personnel informed me that their records were only kept for a maximum period of three years and that all paperwork related to backcountry travel for this time period would have been shredded (as their normal operating procedure).

On September 1, 2011, District Ranger Pat Navaille paid the $150.94 tow bill to YPSS. On the weekend of September 16, 2011, members of Wallace’s family picked up the Jeep and property of Wallace.

Phone Interviews:
I received forwarded emails from Deputy Chief Ranger Nick Herring about people who had contacted the park about possibly seeing Wallace at the Mary Mountain Trailhead on August 25, 2011. Below are summaries of my phone interviews with them.

[REDACTED]: Several attempts, no answer and mailbox stated it was full on number provided. Phone numbers
Contact with Co-worker [REDACTED] on September 2, 2011. [REDACTED] stated his wife knows a friend who worked with [REDACTED] (Wallace’s wife) when she was in Glacier National Park. [REDACTED]’s wife did not want to talk with me and only confirmed with what [REDACTED] stated. Phone numbers [REDACTED]

Interview on September 1, 2011. I received a forwarded phone message from Canyon District Ranger Pat Navaille. Navaille forwarded this message from Deputy Chief Ranger Nick Herring. The message contained a phone number [REDACTED] and contact information for a female from Utah who believed she observed Wallace on Thursday August 25, 2011, in the morning near the trailhead of Mary Mountain in Hayden Valley.

On September 1, 2011, at approximately 1900 hours, I was able to contact this female, identified as [REDACTED] stated that she was on vacation to Yellowstone National Park with her husband [REDACTED] and their two college aged children. [REDACTED] stated that on the morning of August 25, 2011, at approximately 0730 hours, while stopped near a pullout at the northern end of Hayden Valley north of Alum Creek, she observed a 4x4 SUV parked in a pullout near the river at the Mary Mountain Trailhead. [REDACTED] stated she took note of a white male between 50 and 60 years old with light colored hair because he did not appear to be interested in the dozens of bison that were swimming across the river at this location. [REDACTED] stated there were several cars on the road and numerous people watching the bison, but this male did not even look at them. [REDACTED] stated she observed this male put on a lot of sunscreen and then a brightly colored back pack (possibly yellow) before walking west across the road into the Hayden Valley towards the Mary Mountain Trail.

[REDACTED] stated she observed this male to be focused, methodical and purposeful as he tied his boots, prepared his day pack and went into and then out of his vehicle several times before departing. [REDACTED] stated it took the male at least 10 minutes to prepare and she believed he was going on a day hike since he had a smaller pack and no camping items with him that she could see (no tent or sleeping bag). [REDACTED] stated she did not observe this male to be carrying bear spray. [REDACTED] stated she and her family stayed in Cabin P58 in the Canyon Village area the previous night.

**SUMMARY OF ASSIGNMENTS**

**ON-SCENE TEAM:**

- District Ranger Matthew Vandzura
- Special Agent Justin Ivary-Lead
- Ranger Dave Page
- Bear Management Biologist Kerry Gunther
- Ranger Kyle McDowell

**VEHICLE:**

- Ranger Thomas Mazzarisi
- Ranger Katy Trewick

1999 Jeep Cherokee

**TENT:**

- Ranger Mark Plona
- Inventoried, placed into vehicle

**VICTIM ID:**

- Assistant Park Coroner Ranger Colette Daigle-Berg
- Key in pocket matching vehicle at trailhead, Confirmation ID with Medical Examiner

- John Lawrence Wallace
- DOB 5/24/1952
- SSN [redacted]

**NEXT OF KIN:**

By Ranger Colette Daigle-Berg and Michigan State Police

- Notify [redacted] early morning of August 27, 2011

**CAMPGROUND:**

- Ranger Dennis Lojko
- Interview Surrounding sites, Xanterra check in Booth at Canyon Campground

**CORONER:**

Assistant Coroner Ranger Colette Daigle-Berg
Assistant Coroner Ranger Dennis Lojko  
Body assist Ranger Amanda Wilson  
- Guard Body on August 26, 2011  
Body to Bozeman on August 26, 2011, positive ID during autopsy

**NEXT OF KIN:**

NOAA:  
Master Forecaster Kelly Allen at Riverton WY office 307 857-3898 kelly.allen@noaa.gov  
Contacted August 28, 2011 for identification of pictures in Wallace's camera (timeframe)  
Email report: Possibly afternoon or morning of August 27, 2011

**BEAR MANAGEMENT:**  
Kerry Gunther  
Travis Wyman  
Craig Whitman

**MARY MOUNTAIN TRAILHEADS:**  
Bear safety signs taken as evidence  
Ranger John Murray posted Canyon side  
Ranger Jenny Blake posted Old Faithful side

**WEATHER:**  
Laura Dooley - Lightening Data  
Ranger Stephen Roper - NOAA printed weather  
Ranger Dennis Lojko - Canyon Village hand taken weather observation
Ranger Dave Page Report
On August 26, 2011, at about 1330 hours, I (David Page, Park Ranger LE) received a report from the Canyon Backcountry Office that two hikers were reporting that they had discovered a dead body on the Mary Mountain Trail. Rangers M. Plona, Brian Speeg, and I responded to the Canyon Backcountry Office and met with the two hikers at about 1340 hours. The hikers, a father and daughter, identified as (name redacted) reported that they were hiking on the Mary Mountain Trail when they came upon a dead body on the trail. They reported seeing the lower legs of a male lying on the trail and the upper body extending off the trail. They reported that the upper body was covered by dirt. They also described seeing a daypack and a water bottle. They believed the body was a male adult due to the size of the hiking boots. Upon discovery of the body, they did not approach any closer than 5-10 yards. They reported that they left the area quickly being concerned that there might be a bear in the area. They both were aware that bears will “cache” or bury food sources (carcasses). They returned to the Mary Mountain Trailhead in Hayden Valley arriving at about 1315 hours. From here they traveled to the Canyon Backcountry Office to report what they had observed. Prior to arriving at the trailhead, they had contacted two hikers, believed to be French nationals, and told them that they should turn around because of what they had discovered. Through broken English, the couple said that they were going only a short distance.

I questioned the briefly concerning distance of the body from the trailhead and why they were certain that the person was deceased. They reported the position of the lower legs were not of someone alive, and that the upper body was buried. reported the hair stood up on the back of his neck and that it was obvious that the person was deceased. They believed they had hiked about 6 - 7 miles before making the discovery at about 1030 hours. I had Ranger Speeg respond to the Mary Mountain Trailhead to close the trailhead, interview any hikers returning from the trail, and to note the vehicles parked at the trailhead. At about 1400 hours, I called Deputy Chief Ranger Nick Herring and informed him of the report. Herring assumed the role of Incident Commander and I was assigned as Operations Chief. We formulated a plan of trail and area closures and accessing the reported area of the body. I contacted the Old Faithful District Ranger Colleen Rawlings and notified her of the situation. I requested that she assign a ranger to close the Nez Perce Trailhead of the Mary Mountain Trail, note the vehicles at the trailhead, and interview any hikers returning to the trailhead. After retrieving personal and investigative equipment, I met with the helitack crew at the Canyon helicopter landing zone (LZ). I then returned to the Canyon Ranger Station for a briefing with Ranger Boone Vandzura. B. Vandzura was transitioning to the role of Operations Chief. The decision had been made to insert a search team by helicopter to the reported location on the Mary Mountain Trail to locate the body. The team members would be me, Wildlife Biologist Kerry Gunther, Ranger Matt Vandzura, Ranger Kyle McDowell and Special Agent Justin Ivary. M. Vandzura and McDowell were assigned as perimeter protection utilizing lethal rounds in long guns and Gunther and Ivary would have investigation responsibilities. I was assigned to team leader.

The search team assembled at the Canyon LZ and was briefed. The first flight was comprised of Ivary and I, plus a helitack member and the pilot. On the flight in the trail was checked from the air and two passes along the trail were completed. The trail was searched from the air form with two passes made over the more likely area. The aerial search did not produce any sightings of the body, bears, or hikers in the area. We located a meadow that we believed would be west of the described approximate location of the body and landed. A second flight dropped off the remaining search team members at this location.

The team began hiking the trail towards the east, searching the trail and areas to both sides of the trail. Occasionally boot tracks and bear tracks could be scene in the trail. The tracks, both human and bear, were intermittent and not conclusive of consistent direction of travel (M. Vandzura later attributed the boot tracks to be those of the deceased). After traveling about 2 miles, the team observed at a distance what appeared to be lower limbs of a human body lying in the trail. This observation was confirmed as a deceased human body utilizing binoculars at about 1800 hours. Injuries and trauma to the body were visible that would not be conducive to life.

continued next page
SCENE INVESTIGATION: Friday, August 16, 2011

At about 1803 hours, the team cached equipment a short distance (GPS Way Point 015) from the body. A plan was formulated to conduct the scene investigation and provide scene security. The body was approached from the west to avoid the trail and possibly disturbing remaining tracks. Photographs of the body and scene were taken by Ivory.

The body was lying with the feet, clad in leather hiking boots, in the trail. The upper body was extending away from the trail to the west at roughly a 90 degree angle. The upper body, starting near the waist and extending to the head, was covered in dirt and some plant material that had been dug from around the upper body. One arm was partially visible. On the right side, and upon the body, were an orange Kelly day pack and a nearly buried water bottle (nearly empty). Near the head was a water bottle containing what appeared to be a red sports drink. A rain jacket was lying to the left side of the body. A plastic bag containing a plastic sandwich/lunch container was visible in the piled up dirt. Within the dirt and upon the upper body was a long sleeve, medium weight, button-up shirt.

A short distance from the head of the body, a red handkerchief and a brimmed hat was located. Beyond those two items, a whistle and small piece of plaid cloth was found. The small piece of cloth was later identified as a piece the victim's boxer type underwear. All of the items contained what appeared to be blood on them. The described items were recorded and collected.

Small logs (small diameter tops of fallen trees) that lay between these items and the body had what appeared to be blood stains on them as if something bloody had had contact with the logs. There appeared to be at least one partial bloody/dirt soiled bear track on one of the downed trees. Although a partial track, it appeared it may have been from a medium sized bear. Two areas of pushed down vegetation extended from the body in a westerly direction. The pushed down vegetation appeared to be a path made recently by animals that came and went from the body. The two paths intersected a short distance to the west of the body and dissipated as they continued west and crossed small to medium sized downed trees. Some logs had what appeared to be partial, or smudged, bloody/soiled bear tracks.

Near the body were standing trees and a broken off tree at about 10 – 12'. These trees were checked for signs of a human or an animal trying to climb them. No broken tree limbs, bark, or tracks at the base of the trees were observed. The fatality scene seemed to be confined to the limited area between the trail and the small piece of cloth that was discovered a short distance from the body.

We searched the area extending out and away from the body, and located and collected five bear scats. On the trail, bear tracks and boot tracks were observed and photographed. The boot track pattern appeared to match the victim's hiking boot. The boot tracks went in a south and westerly direction and returned to the fatality scene. The tracks appeared to be of normal gait and did not show any acceleration or deceleration marks. The tracks were dimpled and appeared to have been rained on. A more distinct boot track, with a different pattern, was observed just to the north and in an easterly direction from the body. This was attributed to the reporting party (White's), as this fit their description of distance when they sighted the body.

The victim's pack was removed from the dirt and searched for identification. No identification was found in the pack. The pack was mostly empty, but did contain a vehicle key that belonged to a Jeep. It was known that a Jeep was parked at the trailhead. This information was relayed to the Incident Command Post. The button-up shirt and dirt was removed. The body was lying partially on his back and left side. The victim's head was intact with visible trauma. The body was turned onto its side and placed in a body bag. An energy bar, extending from its yellow wrapper, was discovered under the left side of the body. The energy bar was partially consumed as if from a human. The wrapper appeared to be manipulated by a human and not torn into, or bitten, by an animal. The items that were in close proximity to body (day pack, jacket, shirt, and water bottles) were placed in the body bag for transport. The body was removed a short distance to a better location away from trees, placed in a cargo net, and then long-lined via the helicopter to the Canyon LZ. This occurred at about 1920 hours.

continued next page
SCENE INVESTIGATION: Friday, August 26, 2011 - continued

Prior to being flown out, the search team again searched the surrounding area to make sure there were no other victims. The result of this search was negative. The search team was flown out in two trips, and all members were clear of the fatality site and back in the Canyon area by 2015 hours.

SCENE INVESTIGATION: Saturday, August 27, 2011

On the afternoon of August 27, 2011, I (David Page) returned to the fatality site via helicopter with a team to continue the investigation and to begin a bear trapping operation. The team included Bear Management Biological Technicians Travis Wyman and John Carnes, Special Agent Justin Ivery, Interagency Grizzly Bear Study Team member Craig Whitman and Park Ranger Jackie Hampson.

After being flown to the site, we first checked on a bison carcass that was observed during a flight into the scene. This carcass was about 330 yards from the fatality site. The carcass was of a large bull bison and was estimated to be about a week old. There were obvious signs that the carcass had been fed on by grizzly bears. There were numerous bear scats, tracks, and bear paths in the area of the carcass. There was a bear path in a draw that led back to the fatality site. Along the bear path, a day bed was discovered in a grassy area below the fatality site. This day bed was approximately 120’ from the fatality site. Later, a hair sample was recovered from a dead, leaning lodgepole pine tree near the day bed. The hair appeared to be from a bear. It also appeared to be aged and possibly had been on the tree for some time.

Upon arriving at the fatality site, small bear tracks were observed on the trail and on the disturbed soil where the body was discovered. The track size was of a cub of the year. These tracks were new from the time that we left the area the night before, at about 2000 hours.

I assisted Ivery with photographing the scene and locations where evidence had been collected from the previous evening. On the flight in, Ivery had also taken photographs from the helicopter for an aerial view of the scene. After completing this task, Ivery positioned a remote camera with the fatality site and trail in view. I collected bags of dirt from where the body was discovered. The fatality site, and area surrounding the site, was searched for additional bear hair evidence. Hair samples were collected from down logs near the site of the body. Hairs were few and difficult to locate. A short distance from the site, hair (believed to be bear hair) was discovered and collected from a downed tree with a curved branch. This branch extended and curved above the downed log. This log was on a bear path that led away from the body's location. This path had numerous blood-soiled partial bear tracks on downed logs. The hair was caught on the branch of the cub of the year stepping over the log.

Wyman discovered what appeared to be a recent day bed digging on the edge of lodgepole pine regrowth. This day bed was in line from the bear path and was about 220’ from the fatality site. Near this day bed site, Wyman discovered additional blood-soiled tracks on downed logs. These tracks appeared to be from a medium-sized bear and a cub of the year due to their size.

These blood-soiled tracks would have occurred from the time of the fatality to the time we arrived at the site at 1803 hours on August 26, 2011. After 2000 hours on August 26, 2001, with the removal of the body, there would not have been any blood, fluids, or rain to mix with soil to allow the described tracks to be left on the downed logs.

We completed our tasks and were flown from the scene by helicopter at about 1800 hours.

Case Incident Number (For management activities or incidents):

Detailed description of incident, and area of incident:
I was hiking Mary Mountain trail on Aug 27 by myself. I’m unsure of how far I went, but my best guess is that I got to Violet Creek. While on the trail, I passed two creeks that ran into Alum Creek, which the trail follows. The first creek was very warm to the touch and the chemical composition of the water had turned the sediments on the creek bed a bright green. The second creek was lukewarm and very narrow. I believe this second creek was Violet Creek, and when I arrived at it, I followed a trail west along the creek. A few hundred yards along the creek, I spotted an adult grizzly descending a hill in the distance, in the direction of the creek. Like a big fat idiot, I continued walking in the direction of the bear, clapping and yelling in hopes that it wouldn’t crest a hill and spook it as it had disappeared from view.

Once at the top of the nearest hill, I could see five grizzlies (beas #1, 2, 3, 4, 7 & 8) pausing at something in the creek. Bear #4 was standing 20 yards downstream from the rest of the bears, who were gathered around something in the water. Bear #1 pulled a carcass out of the creek and they began eating (except #4). I took several photographs and tried to conceal myself, but after several minutes, Bear #1 noticed me on top of the hill and began walking toward me. I slowly backed down the hill and into the creek. I emerged on the other bank and began walking backwards uphill.

Bear #1, accompanied by one of her cubs, was sitting atop the hill I had left. She saw me from a distance but walked down the hill and back to the carcass. I’m surprised I didn’t soil myself.

From my new hill, I saw an adult and subadult (beas #5 & 9) approaching the carcass in the distance behind the group feeding by the creek. I also took a photo of these bears.

To report bear incidents call (307) 344-2162 (phone) or (307) 344-2211 (FAX) seven days a week from 8:00 am to 4:30 pm. For emergency situations after hours, contact the Communications Center at (307) 344-2537.
These bears were much lighter in color than the other six already at the creek, who were a medium brown. The carcass was starting to attract a caravan of bears, as evidenced by the arrival of bear #6, who was descending the hill next to me, some 40 yards away. We noticed each other simultaneously, both jumping back in surprise. This bear was slightly larger than the others and much darker. He soared and charged me. I had a hatchet in my right hand (I know - big deal) but remained motionless while he charged. He stopped between 15 and 20 yards away, turned tail, and retreated back over the hill. I backed away with extreme clumsiness, tripping over sagebrush, down the hill and into the creek. I walked backwards down the creek to where it intersected with Alum, got out, and walked back to the trailhead by the Yellowstone River without further incident.

There were a handful of lone bison along the trail, and one grazing nearby the feeding grizzlies. As far as physical traits, bear #1, who appeared to be mother to bears #7 and 8, had a long profile, with her brow gradually sloping down to her snout almost like a black bear. The bear that bluff-charged me (#6) was very dark brown and large, but other than that I was too busy imagining myself as cub-food to notice any unique identifiers. Bear #4 never participated in feeding as far as I saw. Bear #1 never ran at or charged me; she walked over to where I had been standing and then back to the carcass. Any other details have been lost due to trauma and an effort to not piss my pants. I've submitted photographs relevant to the incident to park services. Sorry for not reporting the incident earlier; I assumed it was unimportant and trivial.
ORGANIZATION (PARK) NAME
Yellowstone National Park
LOCATION OF INCIDENT
Mary Mountain Trail
NATURE OF INCIDENT
Unattended Death

RESULTS OF INVESTIGATION
Vehicle Inventory of Wallace's Jeep (MI) [REDACTED]

The inventory of the vehicle took place at the Canyon ambulance bay. Pictures of the vehicle's condition and contents attached to report.

Glove Box:
1] Brown leather wallet containing items 2-8 [REDACTED] 8/31/11
3] Emergency contact numbers [REDACTED] 8/26
5] VFW card - [REDACTED]
6] Aetna card - [REDACTED]
7] $13.00 cash - [REDACTED]
8] Yellowstone entrance ticket (collected as evidence)

9] Brown leather Case containing items 10-17 [REDACTED] 8/26
10] Gas receipts (collected as evidence)
11] $212.00 cash (52 in $1, 40 in $5, 80 in $10, and 40 in $20) [REDACTED] 8/26
12] Note pad with gas mileage records [REDACTED] 8/26
13] Small memo pad [REDACTED] 8/26
14] Vehicle registration and insurance [REDACTED] 8/26
15] Tobacco pipe
16] Small black pocket knife
17] Other Misc items

Items 1-7, 9, and 11 were turned over to the coroner, Colette Daigle Berg

Front Passenger Side Floorboard
18] 2011 Yellowstone newspaper (collected as evidence)
19] Reading glasses and case
20] 2 bottles of sunscreen
21] Small bottle of germex
22] Mini tripod
23] National Park Guide Book
25] Note pad with a hiking checklist [REDACTED] 8/26
26] Red Swiss Army knife
27] Small pocket book - Krishnamurti
28] Custer State Park guide
29] Cell Phone manual

Items 24 and 25 turned over to the Coroner, Colette Daigle-Berg

Center Console:
30] Cell Phone and black case turned over to Coroner [REDACTED] 8/26
31] 5 film canisters; one with pennies, one with nickels, and one with dimes
32] 7 CD's - classical music
33] Silver metal thermos
34] Red Bandana
35] Chapstick

| **RESULTS OF INVESTIGATION** |

Rear Passenger Compartment:
- 36) Hiking Guide to Yellowstone (collected as evidence)
- 37) Book – “Man Swarm”
- 38) 9.5 Patagonia trail shoe
- 39) 9.5 Patagonia slip on shoes
- 40) Large mag-lite flashlight
- 41) 3 tarps (2 orange and 1 brown)
- 42) Mexican style blanket
- 43) Road atlas
- 44) Canyon Village Campground Map (collected as evidence)
- 45) Campground reservation itinerary (collected as evidence)
- 46) 1 large green backpack
- 47) 9.5 camo slip on boots
- 48) Bushnell binoculars and case
- 49) Orange sleeping pad in green stuff sac
- 50) 2 brown hiking style hats
- 51) Light black sleeping bag and stuff sac
- 52) Green Cabelas bivy sac
- 53) Natural air purifier
- 54) Canvas Bag – “Yellowstone 2007” containing a bag of quarters, camo flip flops, misc shower items
- 55) Canvas sack with clothes (laundry bag?)
- 56) Peanut Butter jar ½ filled with quarters
- 57) Canvas sack containing jumper cables
- 58) Canvas sack containing flat tire tools
- 59) Canvas sack with cleaning supplies
- 60) Green “wilderness” pack with ropes and tent stakes

Rear Compartment:
- 61) Blue 5 gallon water jug
- 62) Plastic garbage bag
- 63) Empty electrolyte drink container
- 64) Cooler containing bananas, bread, cheese, sausage, peanut butter, and a cup
- 65) Green sleeping bag in red stuff sack
- 66) Blue “Outdoor” bag with clothing

**PHOTO #10**

DESCRIPTION: Campground pass to Canyon campground. Site DB2 and registered through 8-31. “John Wallace” on pass.

**PHOTO #11**

DESCRIPTION: Jeep parked at Mary Mountain trailhead – Canyon side.

**PHOTO #12**

DESCRIPTION: Extremely organized interior of camping and hiking gear.
Enclosed in this box are some of John’s personal items gathered from his vehicle and pack. Also included is his wedding ring. We wanted to return these to you as soon as possible. Our investigators still have his camera and are attempting to get a time stamp for the photos he took. There apparently are a few photos taken from along the trail on his hike in, but no photos from the spot where he died. The investigators are also holding on to his kerchief, his blue hat and his whistle that were found at the scene. I will return the camera as soon as the investigators are done with it. His orange day pack and a few of the items in it were disposed of after the autopsy since they were blood-stained. The rest of his gear is stored in his jeep and we'll return it when [name] returns for the vehicle.

Here is a list of the items I’m returning now:

1. Wallet containing:
   - Michigan driver’s license
   - Emergency contact numbers
   - Chase Visa, Amazon Visa, Mich Tech. Federal Credit Union Visa
   - Shopko phone card
   - VFW card
   - Aetna card
   - $13.00 cash
2. Brown leather case containing:
   - Wedding Ring
   - $212.00 cash
   - Gas receipts, rec. receipt
   - Mich. Tech Fed. Credit Union envelope (empty)
   - Misc. phone numbers
3. Tobacco pipe
4. Black pocket knife
5. Reading glasses and case
6. Red Swiss army knife
8. Bushnell binoculars and case
9. Pantech ATT cell phone and case
10. Cell phone charger and case
11. Eton handheld radio and case
12. Garmin GPS 12 and case
13. Ball Cap w/ “Kuai Coffee” logo
14. Two small memo books
15. Vitamin container w/vitamins

We left his vehicle registration and insurance in his Jeep for the return trip home. Please let me know if there are any other personal items that you may want returned before [name] gets his vehicle back to you.

Sincerely,

Collette Daigle-Berg

NOAA and WEATHER
Hi Steve,

We went back and took a look at a few things. Based on the info we have, it looks like the pictures may have been taken on the 25th in the afternoon. Another possibility would be between 6 and 7am on the morning of the 25th. Lately, thunderstorms have been carrying on all night and into the morning. I attached a pdf that may help. If you need more information, our Science and Operations officer can go through our files on Monday and grab some more specific information on the 24th. It's hard to rule the 24th out completely because I cannot access the radar data from that date. I do, however, have access to lightning data on the 24th and all of it occurred in Montana, well north of Hayden Valley.

I hope this helps. Again, if you need more help, Brett McDonald, our Science and Operations Officer may be of more assistance. He can be reached at brett.mcdonald@noaa.gov

~Kelly

SUMMARY
On August 26, 2011, hikers reported to US Park Rangers that they located a human body on the Mary Mountain Trail in Yellowstone National Park.

On August 26, 2011, from approximately 1803 to 1917 hours, US Park Ranger Dave Page and SA Justin Ivary conducted an investigation at the scene of the fatality. The victim, later identified as John L. Wallace, was found deceased. Bear activity was observed at the scene of the fatality. On August 27, 2011, US Park Ranger Dave Page and SA Justin Ivary continued the investigation at the scene of the fatality. The following report details the GPS way points recorded by SA Justin Ivary on August 26 and August 27, 2011.

Myself and my father left on the Mary Mountain trail (Canyon side) at approximately 7:30 am on Friday, August 20. We hiked, took some photos, and our plan was to continue to Mary Lake. I was hiking a little in front of my dad. The trail started to go into some timber and there were 5 or 6 birds circling above the area. I climbed over a log that was across the trail and that is when I saw a plastic clear drink container with some pink liquid in it and what I thought was a backpack. As I got closer I realized there were boots sticking out, legs, and the upper part of the body was covered with dirt. I ran back towards my dad and told him and then he came down to look as well. We stayed away from the body about 5-10 yards. We then turned around and left quickly because we were afraid there might be a bear in the area. We returned to the trailhead and drove to the Ranger Station. We arrived back at the trailhead at 1:00 pm. Just before getting back to our car we came across two male hikers and

On my shift I checked in a guest who did not want to hear the "Bear Speech," which is part of our check in process. He looked me in the eye and said he was a grizzly bear expert. Then I said, "Fine then you can critique my bear speech." So he got the "bear speech..." and after reviewing the rules, I gave him his map.

This man was about my height 5'7" dark eye, tan and slight build.

The photograph I was shown of Mr. Wallace, is the man I checked in who did not want the "Bear Speech."

I have read this statement and have been given the opportunity to make correction thereon. I attest that this statement is true and correct to the best of my knowledge and that I gave this statement freely and voluntarily, without coercion or reward.

We (redacted) started at 8:15 a.m. hiking the Mary Mountain Trail. Near 5 minutes later, a man (~50 years old) hiked behind us. He was wearing a short (gray) hiking shoes, a dark blue t-shirt and a red fleece jacket and a baseball cap. When we make pictures he overtake us. A little bit later, we noticed a couple behind us, which are going in the same direction. At about 8:45, we overtake the lonely man (~50) and he followed us about 10:30 and turned back. At about 8:30, before we took pictures of the black bear, we meet a woman (~50~55 years) with blond long (shoulder) hair and long dark trousers and a dark jacket and holding a cup of coffee and a binocular coming in the opposite.

I have read this statement and have been given the opportunity to make correction thereon. I attest that this statement is true and correct to the best of my knowledge and that I have this statement freely and voluntarily, without coercion or reward.

direction,

At about 9:30 an older couple of a man and a woman cross our way in the opposite direction. They take about ~60 years. He was wearing a white T-shirt and a long (grey) trousers.

She was wearing a light blue (turquoise) T-shirt and fleece-jacket and also a long trousers.

At 11:00 we turned back (~8.3 km) and to make a rest at the river (12:00). There passed us a couple (woman and man) about 50 years old, although going back the trail. Both wearing a short and she wear a white T-shirt and she a tank-top in blue-green.

At least at about 1:30 a.m. we passed a couple of to young man which are wearing dark clouthes. One of them had long dark hair and a green botte.

On Friday 26/8/11 I hiked along the Mary Mant Trail. I parked in the pullout opposite the trail head at about 0815-0820 hrs and was on the trail by 0830 hrs. I hiked in to the place where a hot spring crosses the trail about 0.6 miles SW of where Violet Peak crosses the trail. On entering the trail there were 4 people in front of me and 2 behind. 2 people passed me on their way back within the 1st mile or so of the trailhead. At the place where the 2nd hot spring crossed the trail I deviated approx due south to the bank on Hidden Creek. I was following trail notes from a hiking instruction book called Day Hiking Yellowstone by Tom Conner. No 13 like I followed Hidden creek with the intention of reaching Creek Africa Basin but a thunderstorm had brewed up and I decided to backtrack to my vehicle. Turn back time was about 1230hrs. I followed basically the same path home.

Statement given to (Ranger): [Redacted] Page: 1 of 1 Pages
Early in the hike I saw a black bear running on the tree line across a meadow at some distance and away from the trail apprx 0.2 to 0.3 of a mile. At that time point a bicycle crossed my path near the western side of the trail.
There were several hikers along the way to Adam Creek.
I saw several unknown scat but they did not appear fresh. The scat were on the trail and looked like dog droppings.
Both outward and return journeys were uneventful with no incidents involving other people or wildlife.
I arrived back at the trail head about 1830hrs to find the trail closed and was asked to make this statement by a Ranger.

I have read this statement and have been given the opportunity to make correction thereon. I attest that this statement is true and correct, to the best of my knowledge, and that I gave this statement freely and voluntarily, without coercion or reward.

In your own words describe the WHO, WHAT, WHEN, WHERE, & HOW.

We went for hiking at about 12:30. Met a couple of persons (man and woman) at the entrance, and somewhat half a mile later another group of four people going back. We hiked for about three miles, crossed some bison, and went back. When going back, we saw that the path was closed, which wasn't the case when we had arrived.

I have read this statement and have been given the opportunity to make correction thereon. I attest that this statement is true and correct, to the best of my knowledge, and that I gave this statement freely and voluntarily, without coercion or reward.

Statement Form:

Please state the facts of what happened in your own words (describe the who, what, when, where, & how).

On Saturday, August 20, 2011, my sister [redacted] my wife [redacted] and I dayhiked the Mary Mountain Trail West to east - starting at the Nez Perce Cr Trailhead @ approx 0800hrs and reaching the Abin Cr Trailhead in the Hayden Valley @ approx 1730hrs. The weather was partly sunny, mild, with a noticeable yet variable, breeze throughout the day.

During our morning ascent to Mary Lake, frequent bear tracks (appeared to be grizzly) were seen in the dust of the trail. These tracks were of various sizes (mid to large) and appeared to be fresher than the boot prints on the trail. The tracks indicated that multiple bears were using the trail although not necessarily at the same time. Abay Nez Perce Cr, the tracks were quite large and very fresh; closer to Mary Lake during the steeper ascent the tracks appeared older & somewhat smaller. All tracks appeared to be traveling east. No fresh bear scat was observed.

At the lake we saw 5-6 men @ the petal cabin. They left the lake before us appearing to travel East off trail. One-half mile East of the cabin we encountered 4 day hikers heading West on the Hayden Valley.

I have read this statement and have been given the opportunity to make corrections thereon. I attest that this statement is true and correct, to the best of my knowledge, and that I gave this statement freely and voluntarily, without coercion or reward.

section of the hike we saw no deer tracks or

Approximately 3/6 (? mile from the Allen Cr. trailhead @ about 9:00am
we saw 3 hikers 1/2 mile to the east of us looking at something
below the trail. We were on a bench and we watched through binoculars as
the 2 men and 1 woman walked 10-15 yds below the trail and examined
something on the ground. We couldn’t tell at that distance what they were bent
over and examining. After several minutes, they slowly returned to the trail and began
walking east. After a few minutes they passed from sight and we continued walking
east. As we approached the site they had been examining, we saw an old bison carcass
where they had been standing. Head, hooves, hide, 6 bones were clearly identifiable.
No meat was visible. I scanned the area including the ridge above and saw nothing
unsual. We did not leave the trail to examine the bison carcass more closely.
About 1/4 to 1/2 mile E. we stopped on another rise above Violet Cr. We
saw the 3 earthbound hikers meet with 2 westbound hikers and stop and
talk for 4-5 minutes - pointing west up the trail. The groups separated
and continued hiking. We did not see the 3 again. The two hikers passed by
us as we snacked while sitting on the rise/ridge and asked us if we had
seen “the bear.” We said, "No," but we explained to them about the carcass.
They indicated they were hoping to see "the bear." After 10 minutes we
began descend to Violet Cr. - Hitting down the slope, a mid-sized
grizzly (200-250 lbs) came running out of the clift of Violet Cr. to our west
and ran up the far slope, angling away from us at a initial distance
of 120-140 yds. He/She running head with his mouth open and
tongue visible and kept looking back down the slope the way it had come. Its rump was very wet as if it had been lying in the creek.
It didn’t acknowledge our presence and only slowed as it crested
the ridge. We did not see the bear again on our hike.

I have read this statement and have been given the opportunity to make correction thereon. I attest that this statement is
true and correct, to the best of my knowledge, and that I gave this statement freely and voluntarily, without coercion or
reward.
We speculated as to whether the running bear had been spotted by the two hikers, or if something else—perhaps another bear—had been the cause of its flight and obvious agitation.

We continued hiking leisurely eastward on the trail watching the large bison heads and glassing the slopes for other activity. We could see the other 2 hikers following as much of the way by about 1/2 mile.

At approx. 1730 we reached the Alum Cl. trailhead. As we prepared to depart, the previously mentioned 2 hikers (a man and a woman) reached the trailhead. When asked if they had seen the bear, they responded by saying they had seen "the cub" but not "the sow." In response to their query, we said we had seen a lone grizzly which definitely was not "a cub." They hurried on to their vehicle.

At the trailhead we noted a "Bear Frequenting Area - 8/18/2011" sign posted at the trailhead sign.
Statement Form:

In your own words describe the WHO, WHAT, WHEN, WHERE, & HOW.

We headed in at 12:30. Just when we entered we came across 2 people, one man grey hair, beard, one woman long hair. Then on the trail itself we came across 4 people, the latter being like 100 yards behind the three others. There were in the three one woman one young black curly hair, one older grey short hair, quite tall. I don't remember the woman. The last guy was a young one. I don't really remember how he looked like. We met them like one mile after the trailhead. They were heading out and we walked for two or three miles, just encountering bison and nothing else special.
Statement Form:

In your own words describe the WHO, WHAT, WHEN, WHERE, & HOW.

We hiked in at 12:30. Just when we entered we came across 2 people, one man, grey hair, beard, one woman, long hair. Then on the trail itself we came across 4 people, the latter being like 100 yards behind the three others. There were eight. Three were two men, one young, black curly hair, one older, gray short hair, quite tall. I don't remember the woman. The last guy was young, white. One I don't really remember how he looked like. We met them like one mile after the trail head. They were heading out.

So we walked for two or three miles, just encountering bison and nothing else special.

I have read this statement and have been given the opportunity to make correction the error. I attest that this statement is true and correct, to the best of my knowledge, and that I gave this statement freely and voluntarily, without coercion or reward.

Ranger Thomas Mazzarisi Report
ORGANIZATION (PARK) NAME
Yellowstone National Park

LOCATION OF INCIDENT
Mary Mountain Trail

NATURE OF INCIDENT
Unattened Death

RESULTS OF INVESTIGATION
Vehicle Inventory of Wallace’s Jeep (MI)

The inventory of the vehicle took place at the Canyon ambulance bay. Pictures of the vehicle’s condition and contents attached to report.

Glove Box:
1) Brown leather wallet containing items 2-8
2) Wallace’s Michigan DL
3) Emergency contact numbers
4) Chase Visa, Shopko Card, Amazon Visa
5) VFW card
6) Aetna card
7) $13.00 cash
8) Yellowstone entrance ticket (collected as evidence)
9) Brown leather Case containing items 10-17
10) Gas receipts (collected as evidence)
11) $212.00 cash (52 in $1, 40 in $5, 80 in $10, and 40 in $20)
12) Note pad with gas mileage records
13) Small memo pad
14) Vehicle registration and insurance
15) Tobacco pipe
16) Small black pocket knife
17) Other Misc items
Items 1-7, 9, and 11 were turned over to the coroner, Colette Daigle Berg

Front Passenger Side Floorboard
18) 2011 Yellowstone newspaper (collected as evidence)
19) Reading glasses and case
20) 2 bottles of sunscreen
21) Small bottle of germex
22) Mini tripod
23) National Park Guide Book
24) White Pill box with unknown pills and capsules
25) Note pad with a hiking checklist
26) Red Swiss Army knife
27) Small pocket book – Krishnamurti
28) Custer State Park guide
29) Cell Phone manual
Items 24 and 25 turned over to the Coroner, Colette Daigle-Berg

Center Console
30) Cell Phone and black case turned over to Coroner
31) 3 film canisters, one with pennies, one with nickels, and one with dimes
32) 7 CD’s – classical music
33) Silver metal thermos
34) Red Bandana
35) Chapstick

Rear Passenger Compartment
36) Hiking Guide to Yellowstone (collected as evidence)
37) Book – “Man Swarm”
38) 9.5 Patagonia trail shoe
39) 9.5 Patagonia slip on shoes
40) Large mag-lite flashlight
41) 3 tarps (2 orange and 1 brown)
42) Mexican style blanket
43) Road atlas

44) Canyon Village Campground Map (collected as evidence)
45) Campground reservation itinerary (collected as evidence)
46) 1 large green backpack
47) 9.5 camo slip on boots
48) Bushnell binoculars and case
49) Orange sleeping pad in green stuff sac
50) 2 brown hiking style hats
51) Light black sleeping bag and stuff sac
52) Green Cabelas bivy sac
53) Natural air purifier
54) Canvas Bag – “Yellowstone 2007” containing a bag of quarters, camo flip flops, misc shower items
55) Canvas sack with clothes (laundry bag?)
56) Peanut Butter jar ½ filled with quarters
57) Canvas sack containing jumper cables
58) Canvas sack containing flat tire tools
59) Canvas sack with cleaning supplies
60) Green “wilderness” pack with ropes and tent stakes

Rear Compartment
61) Blue 5 gallon water jug
62) Plastic garbage bag
63) Empty electrolyte drink container
64) Cooler containing bananas, bread, cheese, sausage, peanut butter, and a cup
65) Green sleeping bag in red stuff sack
66) Blue “Outdoor” bag with clothing

67) Green Rubbermaid containing the following: Items 68-91
68) Phone charger
69) Manila envelope containing various Yellowstone literature including: items 70-74 collected as evidence
70) Yellowstone park map with 2009 Yellowstone entry pass
71) Yellowstone Backcountry Planner newspaper
72) 2008 Yellowstone Day Trip Planner
73) 2009 Yellowstone backcountry reservation confirmation later
74) 2009 Yellowstone newspaper
75) Empty black notebook
76) Mosquito Netting
77) Spare batteries

Ranger Jenny Blake Report
Summary:
On August 26, 2011, I was stationed at the Old Faithful side of the Mary Mountain trailhead to interview hikers as they returned to the trailhead. I interviewed two individuals and cleared the trailhead at approximately 2030 hours. Additionally, I took photos of the trailhead information board, and then collected the “You are Entering Bear Country” sign as evidence.

Narrative:
At approximately 1545 hours, Old Faithful District Ranger Colleen Rawlings informed me that a fatality had occurred on the Canyon district side of the Mary Mountain trail. She instructed me to station at the trailhead and interview hikers as they returned. I was further informed that there were two vehicles currently at the trailhead. One vehicle was reported to be a gray Subaru Forester with a license plate. The other vehicle was reported to be a red Nissan Pathfinder with a license plate.

At approximately 1620 hours, I arrived at the trailhead parking lot. Upon my arrival I observed that the gray Subaru had left. At approximately 1715 hours, I observed one middle aged man and woman with fly rods walking towards the trailhead. I contacted them and they informed me that they had started their hike at approximately 1200 hours. They stated that their itinerary included a half day of fishing along Nez Perce Creek. They further informed me that they did not exceed 2 miles in distance from the trailhead. They also informed me that they left the main trail at first sight of the creek and continued their walk along the shoreline for the duration of their hike in.

The stated that they observed a two week old bison carcass along the shoreline. They further stated that the carcass was scattered and did not have an odor. They reported the location to be directly west of the bridge. They added that they did not see any recent bear activity around the carcass or along the trail on their way back.

further informed me that they had been hiking in Yellowstone National Park for approximately 14 years and were familiar with recognizing bear scat, tree markings made by claws, and tracks. He lastly informed me that they did not observe any ravens or vultures in the area.

**COMPLAINANT’S NAME**

informed me that upon their arrival to the trailhead they observed a white SUV that belonged to a man and woman in their 60’s. They also observed a silver station wagon that belonged to a man and woman of an unknown age. She described the later couple as having been dressed for hiking including hiking poles. also informed me that she observed a middle aged man on the trail dressed in a Bermuda shirt and white shorts.

Ranger Mark Plona Report
Date/Time: August 26, 2011 1340 hours

Location: Canyon District Backcountry Office

Person Interviewed:

D.O.B.: [Redacted]

Address: [Redacted]

Telephone: [Redacted]

Present For Interview: [Redacted] Mark Plona

On August 26, 2011 at 1340 hours I interviewed [Redacted] at the Canyon Backcountry Office regarding the discovery of a deceased individual she had observed while hiking on the Mary Mountain trail. [Redacted] completed a Statement Form before the interview. She voluntarily agreed to participate in the interview.

[Redacted] arrived at Yellowstone with her father on Sunday August 20 and reserved a campsite at Canyon campground site L255, leaving on August 27. [Redacted] spent the time in the park hiking many trials including Lamar Valley, Mary Mountain, cache creek, Pelican Valley. She hiked Mary Mountain trail on Sunday with the goal of reaching Mary Mountain Lake. Due to a late start she only hiked in 4-5 miles before returning to the Canyon trailhead.

On August 26 [Redacted] and her father arrived at the Mary Mountain Trailhead about 0730 hours. The goal was to hike to the Mary Mountain Lake. She could not recall of any vehicles parked at the trailhead but stated several vehicles were parked watching nearby bison.

[Redacted] stated they had hiked about 6-7 miles on the trail and about 1030 she was a short distance in front of her father. She saw some birds circling in the air and then some pink liquid and a backpack. As she walked closer to the objects she observed what she believed was a deceased individual. She saw both legs below the knees, boots, and a portion of one arm. The rest of the body was covered with dirt. She believed, from the size of the boots, the individual was a male. [Redacted] ran back to her father for help.

[Redacted] stated she did not get closer than 5-10 yards to the body. She and her father quickly left the area as they believed a bear was in the area.

[Redacted] hiked back towards the trailhead. About 10 minutes from the trailhead she met two males individuals who she described as French, mid 20’s in age. The two were advised a body was far down the trail. The two males stated they were only hiking a short distance and continued west on the trail.

[Redacted] arrived at the trailhead and observed three vehicles. They were described as a rental camper, a small red car, and a green SUV.
was fairly certain she had observed a deceased body on the trail. She wondered if perhaps it was a hoax. She has not previously seen a deceased body before other than at funerals.

After arriving at the trailhead and her father drove to the Canyon backcountry Office and reported the incident.

had taken about 31 pictures along the trail, although none of the deceased individual. Copies of photographs were placed in the case folder.

Mark Plona 8/27/16
Date/Time: August 26, 2011 1410 hours
Location: Canyon District Backcountry Office

Person Interviewed: [Redacted]
D.O.B. [Redacted]
Address [Redacted]
Telephone: [Redacted]

Present For Interview: [Redacted] Mark Plona

On August 26, 2011 at 1410 hours I interviewed [Redacted] at the canyon Backcountry Office regarding the discovery of a deceased individual he had observed while hiking on the Mary Mountain trail. [Redacted] completed a Statement Form before the interview. He voluntarily agreed to participate in the interview.

[Redacted] is a retired Fisheries professor from [Redacted]. He is a lifelong hunter with trips to Alaska, Wyoming, Montana, including a successful bear hunt.

[Redacted] arrived at Yellowstone with his daughter on Sunday August 20 and reserved a campsite at Canyon Campground site L255, leaving on August 27.

On August 26, [Redacted] and his daughter planned to hike from Mary Mountain Trailhead to Mary Mountain Lake. They arrived at the trailhead at about 0730 hours.

At about 1030, six or seven miles into the hike, [Redacted] was following behind his daughter [Redacted] came running back to [Redacted] and said she found a body. They both approached the body. [Redacted] observed two legs below the knees and boots. The rest of the body was covered with dirt/debris. [Redacted] observed an orange daypack and container with reddish fluid near the body. [Redacted] observed the body from a distance of 10-15 yards. He did not see any human footprints around the body.

He believed, from his past hunting experience, a bear was feeding on the body and had covered the remains with dirt. He feared for his safety and immediately left the area.

While hiking back to the trailhead, about 3-4 miles from the trailhead, [Redacted] saw two male and 1 female individual. He observed the individuals from several hundred yards with binoculars. The individuals were naked and "having a good time". [Redacted] did not make contact with the group.

About 10 minutes from the trailhead, [Redacted] contacted two French males. He advised the two they had found a body far down the trail. The two males said they were only hiking a short distance and continued west on the trail.

[Redacted] stated when they arrived at the trailhead they were three other vehicles. They were described as a rental RV, white sedan, and green jeep.
and his daughter drove to canyon District backcountry office to report the incident.

### RESULTS OF INVESTIGATION

#### MEMORANDUM OF INTERVIEW

The following individuals were interviewed pertaining to John WALLACE at Canyon Campground.

#### On August 29, I interviewed Canyon Campground Host at Canyon Campground. He was the camp host working D-loop the evening of August 24th. He remembers a green Jeep at campsite D-82 on the night of August 24th. He remembered the campsite was clean and organized. did not have any contact with WALLACE that night.

#### On August 31, 2011 at approximately 1430 hours I interviewed at the Canyon Campground manager’s office. was working at the campground front desk checking campers in on August 24, 2011. I showed a driver’s license picture. She recognized the person as John Wallace and she stated that she had checked him into the campground on the morning of August 24. She told me that when she started to read the list of food storage regulations, WALLACE told her he was “a grizzly bear expert”. She said “fine then you can critique my bear speech”. She continued and finished the list. WALLACE took the campground map and food storage regulation information and left the front desk.

Attached is written statement.

Ranger Jon Murray Report
On Friday, August 26, 2011, at about 2:30pm, I was requested to head to Canyon with Ranger Caitlyn Schauer to assist with a search/recovery of a reported body on the Mary Mountain Trail. I met with Ranger Mark Plona at the Canyon Backcountry Office. Our first task was to check campsites E95 and D82. No one was at either site. We acquired camper information from the campground registration office and returned to the Canyon Ranger Station where command had been set up.

My next task was to head to the Canyon side of the Mary Mountain Trail to relieve Ranger Nick Derene and to interview anyone coming in from the trail. (Estimated time of arrival: 4:00-5:00pm) Upon arrival, Ranger Derene had witness statements from nearly all the people at the trailhead (the final one was just finishing their statement). I assisted with the property receipts for collected cameras and memory cards and sent Ranger Derene back to command with the property and statements.

I had Ranger Brian Speeg head south to the next pullout to insure that no one was entering or exiting the trail. I also had Ranger Speeg confirm that all vehicles in the next two pullouts had all their occupants accounted for. All vehicles and occupants were accounted for except for the green Jeep Cherokee parked at the trailhead parking pullout.

Rangers Kevin Dillon and Mitch Renteria arrived to assist with traffic and to post closure signs at these pullouts and the trailhead.

Rangers Katie Trewick and Tom Mazzarizi arrived to gain entry to the green Jeep Cherokee and stayed with the vehicle until the wrecker arrived. At this point, they then followed the vehicle north with the wrecker.

Special Agent Dan Kirshner arrived and stayed briefly about this same time.

I cleared the trailhead pullout at about 9:00pm. At no time during my time there did I observe any individuals entering or exiting the Mary Mountain Trail area.

11-4555

LOCATION OF INCIDENT  
Mary Mountain Trail—Yellowstone National Park

DATE OF INCIDENT  
08/26/2011

NATURE OF INCIDENT  
Coroner's Report—Bear-Related Fatality

COMPLAINANT'S NAME  
Wallace, John Lawrence

COMPLAINANT'S ADDRESS  
Chassell, Michigan

Summary of Incident:

At approximately 1330 hours on August 26, 2011, park visitors advised Canyon Rangers that they had discovered the remains of a human body while hiking on the Mary Mountain Trail in Yellowstone National Park. Park rangers were helicoptered to the scene and located the body of John Lawrence Wallace at approximately 1805 hours. Wallace had been partially consumed by a bear or bears. A forensic autopsy revealed that Wallace had died as a result of a bear attack. Cause of death was recorded as exsanguination, due to multi-system trauma, as a result of an attack by a bear. The manner of death was recorded as "accidental". A death certificate for John Lawrence Wallace, DOB 5/24/1952, was issued by the State of Wyoming.

Scene Investigation: (Reference Case Incident by Ranger Dave Page)

Park Rangers Dave Page, Kyle McDowell and Matt Vandzura, Special Agent Justin IVary and Yellowstone Bear Biologist Kerry Gunther investigated the scene of the fatality on 08/26/2011. Location of the fatality was reported to be along the Mary Mountain Trail in the backcountry of Yellowstone National Park, southwest of Canyon Junction at map coordinates N 44°37.43, W 110°35.30. (Map datum: NAD 83)

The investigation team assessed and photographed the immediate scene, collected personal effects and clothing of the victim scattered at the scene and packaged the remains in a body bag. Members also collected a soil sample from under the body. The team reported finding the body partially consumed and partially covered with soil as if cached by a bear. Personal effects at the scene made it appear as if the victim been had stopped for a food and water break when the attack occurred. Some of the personal effects collected at the scene by the investigation team, including the victim's camera and a lanyard-less whistle, were retained as evidence. The body and remaining effects were flown to the Canyon ranger horse corral helispot. I met the ship at the helispot and transported the body to the Canyon emergency services building.

Identification of Body:

An orange Kelty daypack containing several personal items was found at the scene in proximity to the body. The daypack contained an ignition/door key found to fit an unattended dark green Jeep Cherokee found at the Mary Mountain Trailhead on the Canyon to Fishing Bridge Road. This vehicle, Michigan was registered to John Lawrence Wallace of Chassell Michigan, Michigan. The Jeep Cherokee had been noted by Canyon Ranger Chris Flesch as unattended and parked at the Mary Mountain Trailhead at approximately 1800 hours on 08/25/2011. Rangers gained entry to the vehicle after the body was discovered on 08/25/2011. Once the Jeep was linked with the victim's body it was towed by Yellowstone Park Service Stations to the Canyon emergency services building for inventory.

### Supplemental Case/Incident Record

#### Organizational (Park) Name
Yellowstone National Park

#### Case Incident Number
11-4555

#### Location of Incident
Mary Mountain Trail—Yellowstone National Park

#### Date of Incident
08/26/2011

#### Nature of Incident
Coroner's Report—Bear-Related Fatality

### Complainant's Name
Wallace, John Lawrence

DOB: 05/24/1952

### Complainant's Address
Chassell, Michigan

#### Identification of Body continued:

A wallet containing a Michigan driver's license issued to John Lawrence Wallace of Chassell, Michigan was found in the vehicle. The driver's license listed Wallace's height as 5'9", weight as 150#, and eye color as brown. These descriptors matched those characteristics of the victim. Several other pieces of identification issued to John Wallace, including credit cards, were found in the wallet.

The victim was a white male, brown eyes, graying hair, approximately 5'8" to 5'10" tall. The victim appeared to be between 55 and 65 years of age. A large driver's license photograph of John Wallace was obtained from Michigan State authorities. The photo of John Wallace was compared with the victim. The victim had a distinctive appearing nose and hairline that matched the photo of Wallace.

The bottom row, front teeth of the victim were also distinctive in that they were uneven, overlapped and recessed. A simple gold wedding ring was on his left ring finger. The victim's left thumb nail showed signs of having been chewed down by the victim. The victim was wearing a distinctive Timex analog wrist watch on a cloth band on his left wrist. No identification was found on the body. I removed the wedding band and wrist watch for inventory and return to the victim's family.

A second vehicle key was found in the pocket of the victim's brown LL Bean shirt collected at the scene and included in the body bag. This key was also found to work the ignition and doors of the Jeep Cherokee registered to John Wallace. Additional investigation revealed that John Wallace had a registered campsite, D82, at the Canyon Campground. Rangers found an unoccupied tent and other personal items at the campsite the night of 08/26/2011.

Additionally, a Tupperware container containing bread and cheese was collected with the other effects of the victim at the fatality scene. There was a notebook found in Wallace's vehicle with a checklist that listed, among other things, "Tupperware—bread and cheese."

The wife of victim John Wallace, later confirmed that her husband was in the Yellowstone area; had uneven teeth on the bottom row; owned a green Jeep Cherokee; owned an orange day pack; wore a simple gold wedding band on his left ring finger; wore an analog wrist watch with a cloth band and that he chewed his thumb and fingernails.

Family Notification:

I made contact with Michigan State Police Dispatch at 2305 hours on 08/26/2011 to request assistance with notification of the victim's wife, [redacted] Michigan State Trooper [redacted] advised that he would arrange to notify [redacted] the following morning. At 0509 hours on 08/27/2011 Michigan State Trooper [redacted] phoned to advise me that he would contact [redacted] personally at 0600 hours to advise her of the death of her husband. I requested that [redacted] have [redacted] contact me by phone following his notification.

At approximately 0600 hours [redacted] and I spoke by phone. Also involved in the phone conversation was [redacted] sister-in-law of the victim, John Wallace. I advised Mrs. Wallace and [redacted] that John Wallace had been found dead on the Mary Mountain trail on 08/26/2011, that the cause of his death was unknown at present and that a bear (or bears) was known to have been involved. I advised that his vehicle had been observed unattended at the trailhead on 08/25/2011 and that a key to his vehicle had been found in his pocket and a second key to his vehicle was found in his day pack. Mrs. Wallace advised that she had last talked to her husband by phone on the evening of 08/24/2011. She confirmed that he had uneven teeth on the bottom row; that he owned a green Jeep Cherokee; that he owned an orange day pack; that he wore a simple gold wedding band on his left ring finger; and that he did chew his thumb and fingernails. She advised that he would never hike without his identification on him. She also advised that he was healthy and had no known medical conditions.

I advised Mrs. Wallace and [redacted] that a forensic autopsy would be performed in Bozeman, Montana on Sunday 08/28/2011 at 1400 hours. The result of the autopsy would help determine whether her husband had died of natural causes and then been fed on by bears or whether he had died as the result of injuries caused by a bear attack.

I advised Mrs. Wallace and [redacted] that Valley Mortuary of Jackson Wyoming, would be transporting Wallace's remains to Jackson on Monday 08/29/2011 for interim disposition pending the family's request. I forwarded contact information for Valley Mortuary to Mrs. Wallace.

**Disposition of Body:**

Following identification of the remains and preliminary photos on 08/26/2011 (C. Daigle-Berg photo log—Canyon Ambulance Bay photos attached,) I marked Wallace's remains with identifying information and transported them to Gardiner Montana. I transferred his remains to Mammoth Ranger Daniel Haydon for delivery to the Gallatin County Morgue at the Gallatin County Justice Center in Bozeman Montana. Gallatin County Deputy Coroner Christine Larson had agreed to accept Wallace’s remains at the Gallatin County Morgue while the remains awaited autopsy on 08/28/11. Ranger Haydon transferred Wallace's remains to the on-duty Gallatin County Deputy for storage in the morgue on 08/27/11 at approximately 0330 hours.

#### Cause and Manner of Death:

- Toxicology: Reference AIT Laboratory Case #1724839—Attached

Deputy Coroner Dennis Lojko and I collected vitreous samples from the victim's body at approximately 2200 hours on 08/26/2011. Additional vitreous fluid, blood (heart) and liver samples were collected by Dr. Thomas Bennett during the forensic autopsy on 08/28/2011. I mailed the samples to AIT Laboratories in Indianapolis Indiana on 08/29/2011. Tests requested included a Comprehensive Drug Panel and a Vitreous Electrolyte Panel. Results of the Comprehensive Drug Panel completed on 09/14/2011 showed a positive result for caffeine. All other analytes were negative. The Vitreous Electrolyte Panel showed the following results:

- Sodium: 144 MMOL/L
- Potassium: 13.0 MMOL/L
- Chloride: 124 MMOL/L
- Glucose: 2 mg/dl
- Urea Nitrogen: 18 mg/dl
- Creatinine: 0.2 mg/dl

**Autopsy: Reference Report of Postmortem Examination Case # ME11-213 by Thomas L. Bennett, MD—Attached**

A forensic autopsy of Wallace's remains was performed by Dr. Thomas Bennett on 08/28/2011 at the Gallatin County morgue. Those assisting with the autopsy included: Forensic Pathologist Dr. Thomas Bennett, State of Montana Park County Coroner Al Jenkins, Yellowstone Park Bear Management Specialist Kerry Gunther, Yellowstone Park Deputy Coroner Bonnie Whitman, and myself-Yellowstone Park Deputy Coroner Colette Daigle-Berg.

**Status of body:** Wallace's body was enclosed inside a green vinyl body bag and was covered in dirt. The body was clothed in:
- torn, camouflage, short-sleeved T-shirt, Logo: “Reduce Your Paw Print—Planet Dog”
- torn, tan cargo trousers, Cabela's brand, size 34 reg (single button on pockets)
- leather belt
- white/red/blue plaid boxer style shorts, Stafford brand, size 34
- black socks, calf/knee length
- brown, leather hiking boots, Vasque brand, man's size 10. N7958T on tongue of boot

Found with the body at the scene and included in the body bag were the following items:
- brown, long-sleeved, button-style, "chamois" shirt, LL Bean brand, size men's large, reg (vehicle key found in right pocket)
- green, hooded rain shell, Marmot brand
- orange day pack and contents, Kelty brand, buckles and zippers intact, not broken; (zipper to main compartment was reportedly found open on scene when the body was discovered) (See inventory for contents of day pack)
- blue, wide-mouth water bottle with logo “PIRAGIS Northwood Company” Piragis.com 800-223-6565, almost empty of red fluid
- clear, narrow-mouth Nalgene water bottle, ¾ full with red fluid which looked like Gatorade
- clear plastic, rectangular Tupperware container, containing slices of Artesian style bread and slices of yellow cheese
- partially eaten "Zone" protein bar

Cause and Manner of Death/Autopsy (cont.)

Examination of the body revealed the following injuries:
- left facial and scalp lacerations, right eyebrow laceration
- puncture wounds and lacerations of the right hand and forearm—consistent with defensive type wounds
- extensive anterior torso lacerations, breast plate and rib cartilages fractured with resultant opening of the chest and abdominal walls
- several large puncture wounds across the posterior torso measuring approximately 6 cm on top, 5 cm on bottom. (Per Bear Management Specialist Kerry Gunther these puncture wounds are consistent with the size and shape of a mid-sized bear's canine teeth and inconsistent with the characteristics of the canine teeth of mountain lions and wolves.)
- large and small intestine mostly absent
- kidney and adrenals absent
- extensive musculocutaneous injuries to buttocks and lower extremities
- obvious bruising surrounded the lacerations and puncture wounds—consistent with injuries occurring prior to death

Examination of Wallace's neck organs, heart, lungs, liver, pancreas and spleen revealed no evidence of disease.

Dr. Bennett performed a dental examination and found several amalgam restorations plus remotely-absent wisdom teeth. In addition he noted malocclusion of both upper and lower teeth.

Samples Collected:
Numerous hair samples were collected from the body and clothing by Gunther and Whitman. Cutouts of clothing surrounding the canine teeth puncture holes were collected for possible saliva for DNA analysis. In addition several bite marks were swabbed for possible saliva for DNA analysis. Gunther took possession of these samples and initiated their transport to the Wyoming Game and Fish, Department of Wildlife Forensics Laboratory in Laramie, Wyoming for analysis. On 09/02/2011 Gunther also took possession of the soil sample collected at the scene by the initial investigation team.

Vitreous fluid, aortic blood and sections of liver were collected during the autopsy. I sent them to the AIT Laboratory for analysis. (See results in Toxicology section.)

Maggots were taken by both Dr. Bennett and myself and are included with this report. (Dr. Bennett photo disk and C. Daigle-Berg photo log attached. Additional autopsy photos digitally filed.)
**CONCLUSION:**
Dr. Bennett listed probable cause of death as: exsanguination to grizzly bear attack. He listed other significant conditions as: postmortem anthropophagia. Bruising surrounding some of Wallace's injuries indicated they occurred prior to his death while blood was still circulating. Wounds to his neck and back suggest that the bear came from behind. Defensive wounds on his arms and hands and compacted dirt under his fingernails indicate that he likely attempted to fight the bear's attack. Canine teeth puncture wounds on his back were measured at approximately 6 cm top canine and 5 cm bottom canine—typical size of sub-adult male grizzly bears or adult female grizzly bears (per Bear Management Specialist Kerry Gunther.) Dr. Bennett recorded that the majority of Wallace's wounds appear to have been postmortem. This observation and the fact that Wallace's body was covered with dirt when found suggest that he was killed by a bear, partially consumed and then cached. Scal, bear tracks and hair collected at the scene and from the body were inspected by bear management specialists and found to be consistent with those of grizzly rather than black bears.

**Disposition of Property:**
Wallace's 2000 Jeep Cherokee, Michigan was inventoried by Rangers Tom Mazzarisi and Katie Trewick following its impoundment to the Canyon maintenance yard. Additionally Ranger Mark Plona collected and inventoried the items from Wallace's registered campsites, D82, at Canyon Campground. These items were placed in Wallace's vehicle. (Inventory form attached.) Some of the more personal items from his vehicle as well as some of his personal effects collected on scene and during the autopsy were returned either to (Wallace's nephew) personally or shipped directly to (Wallace's nephew) personally or shipped directly to. Worn clothing items, his orange day pack and other items not suitable for return to the family, were left in the body bag for cremation with Wallace's remains.

The investigation team had collected Wallace's camera, a blue cloth hat, red kerchief, black lanyard-less whistle and a vehicle key at the scene. The camera was retained and the photos downloaded. It was eventually returned when the vehicle was released to family on 09/16/2011. This key was also released to family at this time.

On 08/26/2011, following the autopsy of Wallace's remains, I personally released the following items to nephew of John Wallace, at the request of Mrs. Wallace:
- Vasque hiking boots
- Timex watch
- Suunto compass w/case
- Ray Ban sunglasses w/case
- Matches w/case
- Flexon eyeglass case (empty)
- Vehicle key matching Wallace's Jeep

(Property receipt attached.)

**Disposition of Property (cont.)**

On 08/31/2011, I shipped, via Federal Express, numerous personal effects belonging to John Wallace to Mrs. Wallace. These items included:
- Wallet containing his driver's license, credit cards, $13.00 in cash, etc.
- Leather case containing $212.00 cash and his wedding ring, etc.
- Tobacco pipe
- Reading glasses
- Swiss Army knife
- Book
- Binoculars
- Cell phone, charger and case
- Handheld radio and case
- GPS
- Ball cap
- Two memo books
- Vitamins in container

(See enclosed packing list inventory.)

On 09/16/2011 Deputy Coroner Dennis Loiko released Wallace's Jeep Cherokee and remaining contents to Wallace family members, [Redacted] at the Canyon maintenance yard.

**Death Certificate—Copy Attached**

Yellowstone National Park Deputy Coroner Colette Daigle-Berg electronically recorded John Lawrence Wallace's death certificate with the State of Wyoming Department of Health. Date/Time pronounced dead was listed as August 26, 2011 at 1805 hours. Date and time of injury which led to death was listed as August 25th at Approximately 1500 hours +/- 12 hours. Cause of death was listed as: Exsanguination due to multi-system trauma due to an attack by a bear. Manner of death was recorded as Accidental.

The Specimen identified by the Laboratory Specimen Number has been handled and analyzed in accordance with all applicable requirements.

WALLACE, JOHN  
Laboratory Case #: 1724839  
Printed Date/Time: 09/14/2011, 13:57
REPORT OF POSTMORTEM EXAMINATION

Case Number: ME11-213
Name of Decedent: Wallace, John L.

Date/Time of Death: 8-25-11 (Thursday) / unknown.
Date/Time of Autopsy: 8-28-11 / 1400.
Requested by: Colette Daigle-Berg, Deputy Coroner.
Agency: Yellowstone National Park.

Place of Death: along trail in NW Yellowstone National Park.
Where performed: Gallatin County morgue, Bozeman, MT.
Limits of Exam: None.

Others present at Autopsy: Al Jenkins, Bonnie Whitman, Kerry Gunther and Colette Daigle-Berg, plus Bozeman PD and Gallatin SO officers.

Body identified by: Accompanying papers and physical characteristics.
Age: 59 years
Date of Birth: 
Race: White.
Sex: Male
Length: 67 inches
Weight: 150 pounds (est).
Eye color: brown.
Pupils: 5 / 5 mm
Hair color: Dark gray.
Beard: Stubble.
Moustache: Stubble.
Decomposition: Early.

Pathologic Diagnoses

Anthropophagia, large animal (grizzly bear):
- Left facial and scalp lacerations, plus right eyebrow laceration.
- Extensive anterior torso lacerations, opening his chest and abdominal walls:
  - Large and small intestine essentially absent.
  - Kidneys and adrenals absent.
  - Exsanguination.
- Puncture wounds and lacerations of right hand and forearm, consistent with defense-type wounds:
  - Abundant dirt found ground into hands and under fingernails.
  - Extensive musculocutaneous injuries to buttocks and lower extremities.

Postmortem toxicology results per AIT Laboratory reports.

Probable Cause of Death: Exsanguination, secondary to grizzly bear attack.

Other Significant Conditions: Postmortem anthropophagia.

Date signed: 9-1-11.
Copy of report to Coroner, 9-1-11.

Gross Description

External Description: His body is received inside a closed green vinyl body bag. He is a small-statured man with significant external injuries consistent with anthropophagia by a large animal. There is early decomposition, with moist green discoloration of his right upper extremity, moderate drying artifact elsewhere. Abundant dirt is present over his body. He is clothed in the torn remnants of a brown T-shirt, light brown cargo-style long pants with leather belt over white with blue and red plaid design boxer shorts, plus black socks and ankle-high brown leather hiking boots, all as listed on the accompanying receipt. His hands and feet are inside individual brown paper bags, each gathered and taped about paper at the wrists/ankles. There are significant injuries to the left side of his head, with a "de-gloving" avulsed laceration removing his left ear and pulling the adjacent tissues away from the skull, an additional laceration seen at the left corner of his mouth. Significant denudation of the skin and soft tissues of the anterior chest and abdominal walls is present, his breast plate and adjacent calcified rib cartilages fractured and peeled upwards from their lower edge to expose the chest and abdominal contents. His liver has shifted considerably to the right, with lacerations of the diaphragm noted. The large and small intestines are essentially absent, with only an approximately 1 foot segment of small intestine found separately. Almost no liquid blood remains within the great vessels, and his organs are rather pale and soft.

There are multiple puncture marks over his right upper extremity, including what appear to be bite marks across his right hand dorsal and palmar surfaces, plus scratches, superficial lacerations and punctures of his right forearm, all of which appear consistent with defense-type wounds, mild reddish-violet bruising seen in the surrounding soft tissues. Superficial scratches of his left upper extremity are also noted. Both hands have very short nails, but abundant brown dry dirt is packed over his hands and embedded under his short fingernails. His lower extremities are also significantly injured, with much of the medial side of his right thigh and calf missing, down to the bone. His feet and ankles are intact inside the boots.

Over his back and anterior torso are several pairs of what appear to be opposing pairs of canines, with the punctures, considering the elastic nature of skin, appearing to be from 2 to 2½ inches apart for the upper and lower jaws, and spanning several inches if the jaws were opened. There are scratches with focal reddish-brown bruises alongside these puncture wounds, again bruising seen in the underlying soft tissues.

Prior to the autopsy, we spent considerable time examining his clothing items for any hairs to help in identification of the correct animal, plus we also swabbed several of what appeared to bite marks in hopes of gaining some saliva for DNA studies. We also used a black light with orange and yellow eyeglasses to look for any saliva, there appearing to be some diffuse pale yellow light reaction over his back, but no clear and distinct areas of saliva noted. The other items of clothing with him plus his orange backpack were also examined carefully for evidence of animal hairs, etc. There were two Nalgene bottles with him, a clear one 2/3rds full of a fruity-smelling clear orange drink, the other blue one empty. There was an opened Zone chocolate and peanut butter nutrition bar found beneath him in the bag, appearing to be partly absent over the open end but no distinct teeth marks seen to suggest human or animal biting on it (It is of note that heavy rains occurred over the time he was apparently exposed in this area, and the exposed end of the bar, where parts were missing, may have washed away in the rain). Many of the puncture wounds and lacerated skin and skeletal muscle edges were relatively bloodless at the time of the autopsy, only showing evidence of artificial drying.

Serosal Cavities: Chest and abdominal contents are exposed. The anterior chest wall is ripped open, with fractures through the calcified rib cartilages and anterior ribs, dirt covering the ends of the bones. The lungs and heart are present and are collapsed, with glistening pale surfaces. Essentially no liquid blood remains within his vascular spaces.

Heart: 370 grams. Coronary arteries have usual distribution with only up to 20% atheromatous streak narrowings. The epicardium is thin and glistening. The myocardium is brown, soft and rubbery, a surface small one inch long scratch noted on the anterior right ventricular free wall, no other lesions found, and with no scars, fresh infarcts or asymmetry noted. The valves and aorta are intact, with normal configuration.
Neck Organs: Hyoid intact. Larynx is intact and non-obstructed. Thyroid gland has normal size and consistency on external and cut surfaces. Fibromuscular tissues of the neck are intact with normal configuration, no hemorrhage or increased laxity found.

Lungs: Normal size and shape, although both are moderately collapsed. The pleural surfaces are thin and glistening with only slight anthracosis. The parenchyma is light red, soft and spongy, with no aspiration, consolidation or significant emphysematous changes. The airways and blood vessels are intact and patent.

Gastrointestinal System: Lips are focally lacerated. His teeth are in good repair, a dental autopsy performed finding several amalgam restorations plus remotely-absent wisdom teeth. There are multiple moderately-large maggots present in the mouth, which are sampled in formalin and fresh to forward for entomology studies. Multiple small maggots are also found over his anterior upper back, these also sampled as above, plus fly eggs are also sampled from his clothing and body surfaces. Esophagus is intact. The stomach is intact, containing only about 5 cc of cloudy brown watery fluid with no solid foodstuffs or pill fragments noted. Small intestines, appendix and colon are essentially absent, the few torn remnants otherwise unremarkable.

Liver: Normal size and shape. The capsule is intact and glistening with sharp free edge. The parenchyma is brown, soft and rubbery, with no increased fibrosis, bile stasis or obvious fatty change. Gallbladder contains 15 cc greenish-brown watery bile with no stones. Extrahepatic biliary system is intact and patent.

Pancreas: Normal size and shape but diffusely softened with mild surface saponification.

Spleen: Normal size and shape, the capsule intact. The parenchyma is reddish-violet and spongy. No lymphadenopathy is found.

Adrenals: Absent, secondary to anthropophagia.

Kidneys: Absent, due to anthropophagia.

Urinary Bladder: Wall is collapsed, the dome lacerated.

Internal Genitalia: Prostate and seminal vesicles appear to have normal size and shape to palpation.

External Genitalia: Scrotum and testicles are lacerated and mostly absent. The penile shaft is present with circumcised tip.

Skeletal System: The only apparent fractures found are those to the anterolateral ribs, as noted above. No old fractures are found.

Scalp: Much of the scalp appears to have been de-nuded in avulsed lacerations.

Central Nervous System: Examination deferred.
Summary and Comment

This man reportedly, for several years, had traveled from his upper peninsula of Michigan home to Yellowstone National Park to hike. He last checked in with his wife on Wednesday evening, 8-24-11. His vehicle was found parked, apparently since Thursday morning, at a trailhead in northwest Yellowstone Park. Two other hikers traveling along the trail came across his feet exposed alongside the trail plus other articles including a red bandanna scattered on the ground, his body cached face down in dirt alongside the trail, where he was pronounced dead. The Yellowstone Park Rangers responded to the scene and gathered the multiple articles that were sent for autopsy, and autopsy was authorized. In the orange backpack found lying loosely by him, was found a key that matched the vehicle parked at the trailhead, plus the wallet and other possessions of the decedent were found inside the vehicle. He was wearing a plain metal band on his left ring finger plus a wrist watch, both of which reportedly belonged to this man. There were facial injuries noted, but these did not preclude visual identification, with comparisons to his Michigan Driver’s License photo.

At the postmortem examination, multiple blunt traumatic injuries were identified, wounds which were consistent with him being attacked by a large animal. The multiple patterns of bite marks and scratches and lacerations across his torso and even right hand and forearm are consistent with having been inflicted by a large animal with prominent canines. There were areas of significant bruising noted, such as on the upper anterior left arm, and over his right hand and forearm, the latter associated with increased decomposition relative to the rest of his body, as can accompany traumatized and bruised tissues. The majority of his wounds appear to have been postmortem, however. In my opinion, this man died as a result of the severe injuries received in the attack by a large animal, most probably a grizzly bear, with death a result of blood loss. Toxicology studies are pending at the time of this report.

Disposition of Evidence

Hairs from clothing (divided into those with roots and those without), swabs for possible saliva, clothing samples from apparent bite wounds, remnants of clothing and possessions all released to Yellowstone National Park Rangers following autopsy.

Vitreous samples had been obtained prior to autopsy, but vitreous still remained so additional samples were obtained, plus blood pulled from the aorta and sections of liver are sent to AIT toxicology laboratories.

Maggots and fly egg samples were procured to be forwarded for entymological studies.

Photographs taken by TLB and Colette Daigle-Berg.

Body released for funeral home to prepare and send back to family.

Thomas L. Bennett, M.D.
