

A stylized, artistic illustration of Bryce Canyon National Park. The scene is dominated by purple and blue hues. In the foreground, there are several tall, thin, spire-like rock formations (hoodoos) rendered in a vibrant purple color with black outlines. The background shows a deep blue sky with a large, bright, wavy shape representing a nebula or a full moon. Several small white dots are scattered across the sky, representing stars. The overall style is painterly and evocative of the park's unique desert landscape.
