Section number 7 Brown/Bender Farm,

Page 1

=====
Brown/Bender Farm
Northampton, Ohio
Summit County

The Jim Brown Farm, situated on a hilltop directly east of the intersection of Ira and Akron-Peninsula Road, is accessed by a steep winding drive. The cluster of buildings and orchard are surrounded by dense native timber and commands a panoramic view of the Cuyahoga River valley. The Jim Brown Farmhouse is a large four-over-four Greek Revival House that was listed in the National Register of Historic Places in 1979. The barn and grave marker are also mentioned in the 1979 nomination. Contributing resources within the proposed boundary increase include a greenhouse, the vineyard/ orchard area, and 35 acres of farmland.

The farm is divided along its north-south axis by Akron-Peninsula road and partially divided along its east-west axis by Ira Road thereby segmenting the property into three sections: two fields and the farmstead area. The largest segment lies east of the Akron-Peninsula Road and contains the buildings, orchard, vineyard, pasture, and gravemarker. The building cluster is surrounded by dense woods and is not visible from the road. One field lies west of Akron-Peninsula Road and north of Ira Road. The second field lies in the southwest corner of the intersection of Ira and Akron-Peninsula roads. Both fields are in the Cuyahoga River flood plain and have been intensively cultivated for generations.

The large Greek Revival four-over-four house was constructed (c. 1840) and, along with the raised bank barn, constructed 1886, and the gravemarker was listed in the National Register in 1979. The description of the house, barn, and gravemarker in the 1979 nomination form is consistent with the building's current condition.

The greenhouse, located approximately one hundred ^{FEET} yards south of the house, was built c. 1930. The structure is a very low pitched gable roof resting on concrete foundation walls. One row of rectangular glass panes constitutes the top portion of the walls. These panes are separated by metal muntins. The roof and gable ends are constructed of rectangular panes of glass attached to wood rafters with metal clips. A vertical plank door is located in both gable ends.

The surrounding acreage is considered two separate contributing sites. The orchard/vineyard area is located east of the building cluster and west of the wooded valley wall. The area contains a variety of fruit trees and grapevines which extends approximately two hundred feet north and south through the orchard. The second contributing site is comprised of the remaining fields, located south, west, and north of the farmstead.

The one noncontributing element is the one-and-a-half-story three-bay modern garage, located directly behind the house. The four oil wells located on the nominated property are considered noncontributing structures. None of the wells can be seen from the farmstead area, but are visible from both Ira and Akron-Peninsula roads.

Brown/Bender Farm
Northampton, Ohio
Summit County

The Jim Brown, Earva Bender Farm is being nominated as an amendment to the "Jim" Brown House nomination under Criterion A for agriculture. The farming practices associated with the nominated property reflect two distinct periods of agricultural development in the Cuyahoga Valley. The contributing resources are consistent with the property types, significance statements, and registration requirements discussed in the Agricultural Resources of Cuyahoga Valley MPD, Associated Property Type: Farmsteads.

The 1979 nomination was justified under architecture and folklore. This amendment includes the additional criterion and area of significance listed above. The period of significance has also been expanded to 1930 to reflect the new information.

Historical Development

In 1845, Daniel M. Brown acquired 208.83 acres in lot #83 from John Wells. The following year he purchased ninety-six additional acres in the same lot from the State of Connecticut. Title to the property was transferred to James R. Brown in 1850.

Jim Brown was a character of much local notoriety. His exploits as a tavern owner and counterfeiter are fully discussed in the 1979 nomination. His interest in farming was minimal. He died in 1865 when he fell in a canal boat and fractured his skull.

After Jim Brown's death, the farm passed to his son, James R. Brown, Jr. In 1886 he replaced the old barn with the current structure. He continued to live on the Northampton farm until his death in 1889. The Brown farm then passed to Miner H. Howe, then to Hattie and Fred Ozier. Andrew J. Bender purchased the property in 1907.

Andrew J. Bender died, c. 1930, and the farm passed to his son, Earva, the youngest of ten children. The Bender farm was one of the few in the valley that successfully made the transition from dairy and grain farming to market produce and truck farming. The Bender farm continued its truck farming operations through the 1940s.

Criterion A: Agriculture

The 1850 U.S. Census, Products of Agriculture for Summit County, indicates that only 100 of the 205 acres were improved. Livestock on the farm was valued at \$415 and included 3 horses, 5 milk cows, 14 "other" cattle, and 12 swine. The major crop on the farm was indian corn, production of which is listed at 1,600 bushels. Other crops listed include 100 bushels of oats and 90 bushels of Irish potatoes.

The James Brown, Jr., farm listed in the 1870 census indicates that the farm had expanded since 1850 and was more focused on dairy operations. The acreage included 205 improved acres and 100 wooded. Instead of five milk cows, the farm had 18. Indian corn was still the largest crop, at 100 bushels. An additional commodity of the farm was cheese. According to the census records, the Brown Farm produced 4800 lbs of cheese in 1869.

When Andrew Bender acquired the farm in 1907, he moved from a small fifty acre farm near Barberton, Ohio. Prior to the year 1927, the Bender Farm produced dairy products, beef, and a variety of feed grains: corn, wheat, and oats. In an interview, Earva Bender recalled that "farms were self-sufficient then, we butchered four times a year, and got everything else we needed, except sugar and salt, from the ground." He bought his first tractor in 1918. He said, "it was noisy, but I got a lot of work done with it and I sure didn't want to go back to horses."

In response to changes in the agricultural economy and the population growth of Akron in the early 1920s, many farmers were forced to shift from dairy and grain production to the marketing of fruits and vegetables. Truck farming became the Benders "stock and trade," and they supplied both the wholesale and retail markets with fruits and vegetables fresh from the farm. The sandy loam soil along the river was good for watermelons and pumpkins, but not fruit trees, Bender explained. Orchards produce better on heavier soil, like that on the hillside behind the house, where apple, cherry and peach trees, along with the vineyard are located.

Bender planted one hundred acres of sweet corn along with tomatoes, watermelons, and pumpkins on the bottom land next to the river. By the 1940s, the Benders' vegetable stand along Akron-Peninsula Road had become a local landmark and stories relating to the vegetable stand abound. A favorite tells of Bender's activities during Halloween. At that time, the stand was decorated and the Benders wore costumes while conducting tours through the pumpkin patch as children picked out the best for carving.

Historic Integrity

The Brown/Bender Farm is surrounded by wooded areas or agricultural fields, some of which are still in use. The area conveys a strong sense of rural character. All the contributing buildings and objects are located in their original locations. The noncontributing garage and wells do not significantly impact the historic setting.
