REGISTRATION FORM

This form is for use in nominating or requesting determinations of eligibility for individual properties or districts. See instructions in Guidelines for Completing National Register Forms (National Register Bulletin 16). Complete each item by marking "x" in the appropriate box or by entering the requested information. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets (Form 10-900a). Type all entries. Use letter quality printers in 12 pitch. Use only 25% or greater cotton content bond paper.

Describe present and historic physical appearance.

The Leigh Lake Ranger Patrol Cabin originally was built using standardized plans of the United States Forest Service to be a backcountry ranger patrol cabin for horse patrols during the early years of the present century. It was built on the northern edge of Leigh Lake northwest of Moose, Wyoming, along a former patrol trail into the Teton Mountains which rise west of the cabin. Both historically and today the cabin is set in amongst pine trees with a clearing. The porch faces south onto Leigh Lake. The cabin has a small portable fire cache shed associated with it. The cabin was built in an adaptation of vernacular style as defined by the Forest Service for backcountry cabins. Clearly evident is the attempt by the Forest Service to maximize the use of native building materials, especially log and stone, thereby reducing the amount of material that had to be brought to the construction site on horseback or by mule. The structure is one story and has a gable roof to withstand snow loads. The design appears to be from a standard set of plans used by the Forest Service during the 1920s and early 1930s. Earthtones are the predominate colors with brown stained walls and weathered wood shingles. Ongoing maintenance operations to keep the building active have replaced the original fabric with in-kind materials. As a result the exterior feeling, design, and character have not been lost. The cabin still serves a function similar to the one it did historically, in that it is used as seasonal housing for patrol rangers during the summer. The quality that sets the cabin area apart from its surroundings is its log architecture and the fact that it is set in a small clearing in the pine forest.

State significance of property, and justify criteria, criteria considerations, and areas and periods of significance noted above.

The Leigh Lake Patrol Cabin is significant under Criteria A because it remains as a clear statement of the U.S. Forest Service's role at what became Grand Teton National Park. Further, the cabin is the only example of the USFS patrol cabin in its historic form extant in the Park. The cabin is associated with the Conservation context of the Grand Teton National Park Multiple Property form.

The patrol cabin was built during the early 1920s, some sources indicate 1922 as the USFS executed plans for natural resource protection. It was one of the first ranger cabins to be built in the backcountry in Grand Teton National Forest and in 1929 it became property of the National Park Service when Congress established the original boundaries for Grand Teton National Park. Since then it has continued to be a part of the National Park Service's system of patrol cabins for resource and visitor protection. It was refurbished by the Civilian Conservation Corps in 1934. The ranger cabin then remains as a physical link with the pre National Park Service period of conservation and resource protection at modern Grand Teton National Park. The Ranger Station fulfills the registration requirements set forth in the multiple property documentation in that it is in its historic location and still maintains its setting to convey its feeling and character. The building is fifty years old and is of log and wood materials. Interior remodeling and modernization have all but destroyed the interior fabric through impacts to the log walls and the interior is not considered significant.

Verbal Boundary Description

The boundary of the nominated property is delineated by a circle centered on the
UTM coordinate with a 50 yard radius.

The property can be found on the Jenny Lake, Wyo., 7.5' U.S.G.S. quadrangle map.

See continuation sheet

Boundary Justification The boundary as described includes the building and
structures of the district and a portion of the forest around it to include
historic setting of the district and its feeling as a back country ranger
station.
