National Park System

The National Park System of the United States, now in the early years of its second century, comprises nearly 300 areas covering some 31 million acres in 49 States, the District of Columbia, Puerto Rico, and the Virgin Islands. These areas are of such national significance as to justify special recognition and protection in accordance with various acts of Congress.

By act of March 1, 1872, Congress established Yellowstone National Park in the Territories of Montana and Wyoming "as a public park or pleasuring ground for the benefit and enjoyment of the people" and placed it "under exclusive control of the Secretary of the Interior." The founding of Yellowstone National Park began a world-wide national park movement. Today more than 100 nations contain some 1,200 national parks or equivalent preserves.

In the years following the establishment of Yellowstone, the United States authorized additional national parks and monuments, most of them carved from the Federal lands of the West. These, also, were administered by the Department of the Interior, while other monuments and natural and historical areas were administered as separate units by the War Department and the Forest Service of

the Department of Agriculture. No single agency provided unified management of the varied Federal parklands.

In an act signed on August 25, 1916, Congress established in the Department of the Interior the National Park Service to provide cohesive administration of such areas under the Department's jurisdiction. The Act says:

The service thus established shall promote and regulate the use of the Federal areas known as national parks, monuments and reservations . . . by such means and measures as conform to the fundamental purpose of the said parks, monuments and reservations, which purpose is to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.

A Presidential executive order in 1933 transferred 63 national monuments and military sites from the Forest Service and the War Department to the National Park Service. This action was a major step in the development of today's truly national system of parks—a system that covers all regions of the nation and includes areas of historical as well as scenic and scientific importance.

Congress declared in the General Authorities Act of 1970 "that the National Park System, which began with the establishment of Yellowstone National Park in 1872, has since grown to include superlative natural, historic and recreation areas in every region . . . and that it is the purpose of this Act to include all such areas in the System. . . ."

Additions to the National Park System are now generally made through acts of Congress, and national parks can be created only through such acts. But the President has authority, under the Antiquities Act of 1906, to proclaim national monuments on lands already under Federal jurisdiction. The Secretary of the Interior is usually asked by Congress for his recommendations on proposed additions to the System. The Secretary is counseled by the National Park System Advisory Board, composed of private citizens, which advises him on possible additions to the System and policies for its management.

Administration

The National Park Service administers the System through nine Regional Offices. The addresses of these offices and their areas of responsibility follow:

Nomenclature of Park Service Areas

The diversity of the parks is reflected in the variety of titles given to them. These include such designations as national park, national preserve, national monument, national memorial, national historic site, national seashore, and national battlefield park.

Although some titles are self-explanatory, others have been used in many different ways. For example, the title "national monument" has been given to great natural reservations, historic military fortifications, prehistoric ruins, fossil sites, and to the Statue of Liberty.

In recent years, Congress and the National Park Service have attempted, with some success, to simplify the nomenclature and to establish basic criteria for use of the different official titles. Brief definitions of the most common titles follow.

Areas added to the National Park System for their natural values are expanses or features of land or water of great scenic and scientific quality and are usually designated as national parks, monuments, preserves, seashores, lakeshores, or riverways. Such areas contain one or more distinctive attributes such as

forest, grassland, tundra, desert, estuary, or river systems; they may contain “windows” on the past for a view of geological history, imposing landforms such as mountains, mesas, thermal areas, and caverns; and they may be habitats of abundant or rare wildlife and plantlife.

Generally, a **national park** covers a large area. It contains a variety of resources and encompasses sufficient land or water to ensure adequate protection of the resources.

A **national monument** is intended to preserve at least one nationally significant resource. It is usually smaller than a national park and lacks its diversity of attractions.

In 1974, Big Cypress and Big Thicket were authorized as the first **national preserves**. This is a new category established primarily for the protection of certain resources. Activities such as hunting and fishing or the extraction of minerals and fuels may be permitted if they do not jeopardize the natural values.

Preserving shoreline areas and off-shore islands, the **national lakeshores** and **national seashores** focus on the preservation of natural values while at the same time providing water-oriented recreation. Although national lakeshores can be established on any natural freshwater lake, the existing four are all located on the Great Lakes. The national seashores are on the Atlantic, Gulf, and Pacific coasts.

National rivers and **wild and scenic riverways** preserve ribbons of land bordering on free-flowing streams which have not been dammed, channelized, or otherwise altered by man. Besides preserving rivers in their natural state, these areas provide opportunities for outdoor activities such as hiking, canoeing, and hunting.

Although best known for its great scenic parks, more than half the areas of the National Park System preserve places and commemorate persons, events, and activities important in the Nation's history. These range from archeological sites associated with prehistoric Indian civilizations to sites related to the lives of modern Americans. Historical areas are customarily preserved or restored to reflect their appearance during the period of their greatest historical significance.

In recent years, **national historic site** has been the title most commonly applied by Congress in authorizing the addition of such areas to the Park System. A variety of titles—**national military park**, **national battlefield park**, **national battlefield site**, and **national battlefield**—has been used for areas associated with American military history. But other areas such as **national monuments** and **national historical parks** may include features associated with military history. **National historical parks** are commonly areas of greater physical extent and complexity than national historic sites.

The title **national memorial** is most often used for areas that are primarily commemorative. But they need not be sites or structures historically associated with their subjects. For example, the home of Abraham Lincoln in Springfield, Ill.,

is a national historic site, but the Lincoln Memorial in the District of Columbia is a national memorial.

Several areas administered by National Capital Region whose titles do not include the words "national memorial" are nevertheless classified as memorials. These are John F. Kennedy Center for the Performing Arts; Lincoln Memorial; Lyndon Baines Johnson Memorial Grove on the Potomac; Theodore Roosevelt Island; Thomas Jefferson Memorial; and the Washington Monument—all in the District of Columbia.

Originally, **national recreation areas** in the Park System were units surrounding reservoirs impounded by dams built by other Federal agencies. The National Park Service manages many of these areas under cooperative agreements. The concept of recreational areas has grown to encompass other lands and waters set aside for recreational use by acts of Congress and now includes major areas in urban centers. There are also national recreation areas outside the National Park System administered by the Forest Service and the U.S. Army Corps of Engineers.

National parkways encompass ribbons of land flanking roadways and offer an opportunity for leisurely driving through areas of scenic interest. They are not designed for high speed point-to-point travel. Besides the areas set aside as parkways, other units of the National Park System include parkways within their boundaries.

Two areas of the National Park System have been set aside primarily as sites for the **performing arts**. These are Wolf Trap Farm Park for the Performing Arts, Va., America's first such national park, and the John F. Kennedy Center for the Performing Arts, D.C. Two historical areas, Ford's Theatre National Historic Site, D.C., and Chamizal National Memorial, Tex., also provide facilities for the performing arts.

Designation of Wilderness Areas

In the Wilderness Act of 1964, Congress directed three Federal agencies, including the National Park Service, to study certain lands within their jurisdiction to determine the suitability of these lands for inclusion in the National Wilderness Preservation System.

By subsequent legislation, Congress has designated **wilderness areas** in many units of the National Park System. This designation (noted in this booklet in the listing by States) does not remove wilderness lands from the parks. But it does ensure that they will be managed to retain their "primeval character and influence, without permanent improvements or human habitation. . . ."

The Act provides, generally, that "there shall be no commercial enterprise and no permanent road within any wilderness area . . . and (except for emergency uses) no temporary road, no use of motor vehicles, motorized equipment or motorboats, no landing of aircraft, no other form of mechanical transport,

and no structure or installation." Wilderness areas are open to hiking and, in some cases, horseback riding, primitive camping, and similar pursuits.

Parks in the Nation's Capital

As the Nation's Capital, Washington has a unique park system. Most of the public parks (which in other communities are maintained by a municipal park agency) are administered by the Federal Government through National Capital Region of the National Park Service.

National Capital Region has inherited duties originally assigned to three Federal Commissioners appointed by President Washington in 1790. The city's parks were administered by a variety of Federal agencies until this responsibility was assigned to the National Park Service under the Reorganization Act of 1933. Most parklands in the city are included in the Federal holdings, although the District of Columbia also operates parks, playgrounds, and recreational facilities.

National Capital Region also administers several National Park System units in Maryland, Virginia, and West Virginia, which are shown in this booklet in the listing by States.

National Capital Parks

1100 Ohio Dr., SW
Washington, DC 20242

(Also in Maryland)

This park system of the Nation's Capital comprises parks, parkways, and reservations in the Washington metropolitan area, including such properties as the Battleground National Cemetery, the President's Parks (Lafayette Park north of the White House and the Ellipse south of the White House), the parks flanking the Great Falls of the Potomac, a variety of military fortifications, and green areas.

When Congress established a permanent National Capital in 1790, the city's Federal Commissioners were given the power "to purchase or accept such quantity of land as the President shall deem proper for the use of the United States." Under this authority the Commissioners purchased Washington's first 17 public reservations and accepted donations of other lands required for the street system of L'Enfant's plan. Today more than 300 park units derive from these lands. Office of Public Buildings and Public Parks of the National Capital was abolished and public reservations were transferred to National Capital Parks, National Park Service, Aug. 10, 1933.

Affiliated Areas

Because they preserve important segments of the Nation's heritage, yet are not officially recognized as units of the National Park System itself, 18 areas that are affiliated with the system are given special recognition in this section.

In an act of August 18, 1970, the National Park System was defined in law as "any area of land and water now or hereafter administered by the Secretary of the Interior through the National Park Service for park, monument, historic, parkway, recreational or other purposes." The same law specifically excludes "miscellaneous areas administered in connection therewith," that is, those properties that are neither Federally owned nor directly administered by the National Park Service but which utilize NPS resources.

The affiliated areas comprise a variety of properties in the United States and Canada that preserve significant resources outside the National Park System. Some of these properties have been recognized by acts of Congress, others have been designated national historic sites by the Secretary of the Interior under authority of the Historic Sites Act of 1935. All draw on technical or financial assistance from the National Park Service.

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the wisest use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interests of all our people. The Department also has a major responsibility for American Indian reservation communities and for people who live in Island Territories under U.S. administration.
