

Olympic National Park Fish & Shellfish Regulations

Olympic National Park may eventually be the means of saving a nucleus of all of our anadromous fishes on the Pacific Coast as present safeguards are entirely inadequate.

Arthur S. Einarsen, 1938, Oregon State College

Fish shown on cover:
steelhead trout
mountain whitefish
coastal cutthroat trout
Chinook salmon
bull trout
sockeye salmon

**Effective
May 1–April 30
each year.**

**Please see
locally posted
regulation
changes and
visit the park's
website for the
most current
regulations.**

The Reason for Fishing Regulations

Protect Native Fish Populations Provide Fishing Opportunities

Three primary objectives guide Olympic National Park's fisheries management program:

1. Manage aquatic resources as an important park of the park ecosystem.
2. Preserve and restore native fishes and their habitats.
3. Provide recreational fishing opportunities for the enjoyment of park visitors, consistent with the first two objectives.

Three types of regulations protect native fish populations:

1. **General (pages 6–7):** Become familiar with the general regulations, which include information on seasons, licenses, legal gear, fish consumption advisories, closed waters, and size and possession limits.
2. **Area Specific (pages 8–13):** Become familiar with regulations for specific areas in the park.
3. **Species Specific (pages 14–15):** Become familiar with the different fish species commonly encountered in the park, their identification, and regulations specific to each species.

Help preserve Olympic fisheries for the future.

Introduction

Olympic National Park has . . .

- ◆ 12 major watersheds and more than 4,000 miles of rivers and streams.
- ◆ 600 high lakes, two large lakes, and more than 70 miles of intertidal habitats along the Pacific Coast.
- ◆ Lake Ozette—the third largest natural lake in Washington State.
- ◆ 31 native freshwater species from 11 different families of fish.
- ◆ At least 70 unique populations of Pacific salmon, trout, and char.
- ◆ 5 non-native fish species: brook trout, yellow perch, largemouth bass, yellow bullhead, and American shad.
- ◆ As of 2008, 5 fish species on the federally threatened species list: bull trout, Puget Sound steelhead, Puget Sound Chinook salmon, Hood Canal summer chum salmon, and Ozette Lake sockeye salmon.

Geography

Olympic National Park is home to all salmon species native to the Pacific Northwest. Encompassing nearly one million acres of designated wilderness on the Olympic Peninsula of northwestern Washington, Olympic National Park is a designated World Heritage Site and Biosphere Reserve that contains one of the largest contiguous areas of relatively pristine habitat throughout the range of several west coast fish species. In fact, Olympic National Park supports some of the most extensive runs of wild salmon, trout, and char remaining in the Pacific Northwest.

On the west side of the park are major coastal watersheds that include the Bogachiel, Dickey, Hoh, Queets, Quinault, and Quillayute rivers. To the north are the Elwha, Gray Wolf, and Sol Duc rivers and to the east are the Dosewallips, Duckabush, Hamma Hamma, and North Fork Skokomish rivers. These rivers drain directly into the marine waters of the Pacific Ocean, Strait of Juan de Fuca, or Hood Canal/Puget Sound. In the park's rugged terrain that ranges in elevation from 8,000 feet to sea level are two large lakes—Lake Crescent, the crown jewel of the park, and Lake Ozette, the third largest natural lake in Washington State.

. . . great salmon threshed in the water all night long. . . At every few yards was to be seen the remains of a fish where cougar, coon, otter, or eagle had made a meal.

Private Harry Fisher, along the Queets River during 1890 O'Neil Expedition

Ecology & Economy

Olympic National Park's population of salmon species (salmonids) are critically important to the park's ecology. For example, they provide food for more than 130 species of aquatic and terrestrial wildlife species. The carcasses of spawned salmon may also contribute 20 to 40 percent of the phosphorus, nitrogen, and carbon in freshwater systems.

Olympic National Park has exclusive jurisdiction over recreational fisheries in the park. Fisheries biologists work with the State of Washington and eight treaty tribes each year to establish harvest and gear regulations. Fishing in Olympic National Park emphasizes the quality of recreational fishing rather than providing fish for human consumption. Anglers, in return, have the opportunity to fish for wild, hatchery, and non-native fish in a natural setting.

Recreational fishing has long been a popular activity on the Olympic Peninsula, and now is a multimillion-dollar industry for local communities.

Black bear with chum salmon

Within Olympic National Park, virtually all of the waters support highly popular sport fisheries. This popularity is fostered by the park's proximity to the Seattle/Tacoma metropolitan area (100 miles away), where many of the rivers that still harbor salmonids are closed to fishing. The Seattle/Tacoma population has grown significantly over recent decades—about 20 percent from 1990 to 2000—a trend that is projected to continue. Because of this, fisheries managers expect recreational fishing to increase.

Salmon returning to Olympic National Park also are harvested outside of the park during most weeks of the year in economically important commercial and subsistence fisheries. Salmon have a significant role in the cultures of treaty tribes that surround the park: Elwha Klallam, Hoh, Jamestown S'Klallam, Makah, Queets, Quileute, Quinault, and Skokomish.

PREVENT THE SPREAD OF AQUATIC INVASIVE SPECIES

Before you enter Olympic National Park and any time you move to another body of water within the park:

CLEAN YOUR BOAT

Mud, plants, and animals on watercraft, trailers or vehicles can cause the spread of invasive species such as milfoil, zebra mussels, and Quagga mussels. Invasive mussels cause millions of dollars of damage to boat and water systems by clogging pipes and engines. They also impact the native ecosystem and sport fisheries.

CLEAN YOUR GEAR

1. Remove ALL visible mud, plants, and fish from your boat, trailers, waders, boots, and nets.
2. DO NOT dump any water from other sources into Olympic National Park waters. Drain your boat hull and live well in a safe location away from all park surface waters.
3. NEVER empty bait or release fish into a body of water unless they came out of it.
4. CLEAN AND DRY EVERYTHING that comes in contact with water before entering a new body of water.

PRESERVE THESE SCENIC AND PROTECTED WATERWAYS

Lake Crescent

General Regulations

1 Fishing Season

All waters in Olympic National Park are closed to the removal of fish and shellfish (including freshwater crayfish and freshwater mussels) except as described on pages 8–12 (freshwater fish) and page 13 (marine fish & shellfish). All waters described on pages 8–12 are open to fishing from one hour before official sunrise to one hour after official sunset.

2 Fishing Licenses

- A Washington State Recreational Fishing License is NOT required to fish in Olympic National Park EXCEPT when fishing in the Pacific Ocean from shore. No license is required to harvest surf smelt.
- A Washington State catch record card is REQUIRED to fish for salmon or steelhead and they must be accounted for as if caught in State waters.
- A Washington State Shellfish/Seaweed license is REQUIRED for harvest of shellfish from the Pacific Coastal Area. Harvest of seaweed, kelp, and unclassified species is prohibited (*see Marine Fish and Shellfish Regulations, page 13*).
- Fishing guides must apply for commercial use authorization to conduct fishing trips in Olympic National Park. Please call 360-565-3007 for an application.

3 Legal Gear

- Recreational fishing in freshwater areas of Olympic National Park is restricted to artificial lures with a single point barbless hook (*see pages 8–12*).

- Anglers must only use a single rod, reel and line that are under immediate control.
- Seines, traps, drugs, explosives, and nets (except to land a legally hooked fish or dip-net smelt) are prohibited.
- Only knotless nets may be used to land fish.

4 Fish Consumption Advisory

Locations and Fish: PJ Lake (brook trout), Hoh Lake (brook trout), and Ozette Lake (largemouth bass, yellow perch).

Pollutant: Mercury. Some fish exceed the human consumption threshold for mercury.

The National Park Service recommends following the Washington Department of Health guidelines for safe consumption of recreationally caught fish, available at www.doh.wa.gov/ehp/oehas/fish/.

5 Boats & Rafts

Fishing from boats or other floating devices is permitted on the following rivers: Ozette, Queets below Tshletshy Creek, Hoh downstream from the launch site located ~½ mile from the park boundary near South Fork confluence, Hoh in the Pacific Coastal Area, Quinault below the North Shore Quinault River Bridge, Elwha below Glines Canyon Dam, and Quillayute and Dickey rivers. Motorized craft are only allowed on the Quinault below the North Shore Quinault River Bridge, in the park's coastal portions of the Quillayute, Dickey, and Hoh rivers (in the Pacific Coastal Area), and in Lake Mills, Lake Crescent, and Ozette Lake.

6 Waters Closed to Fishing

- The portion of Kalaloch Creek downstream from Highway 101 bridge and the area used for domestic water supply (as posted).
- Elwha River from the Lake Mills spillway downstream 400 feet.
- Sol Duc River from 100 yards upstream to 250 yards downstream (or as posted) at the Salmon Cascades.

7 Bait

Bait is defined as any artificial or natural substance that attracts fish by scent and/or flavor. Most freshwater areas of Olympic National Park are managed as “Selective” or “Quality” fishing areas where bait is prohibited. Areas open to bait fishing are listed on pages 8–13.

Prohibited in all park waters:

- Possession of illegal bait.
- Using live or dead minnows, chub, or other freshwater bait fish.
- Attracting, collecting, or feeding fish by using fish eggs, roe, or food.
- Digging for bait.

8 Salmon Size & Possession Limits

- 12-inch minimum size limit.
- Adult Chinook: 24 inches or more
 - Adult coho: 20 inches or more
- Daily possession limit: two fish in fresh form.

9 Identifying Hatchery Fish

Hatchery salmon and steelhead (except for Queets River hatchery steelhead) are identified by a healed scar where the adipose or ventral fins have been removed (*see below*), and harvest is only allowed in areas and seasons listed on pages 8–12. Hatchery steelhead on the Queets River are identified by a dorsal fin height of less than 2½ inches.

10 Catch & Release All Wild Fish

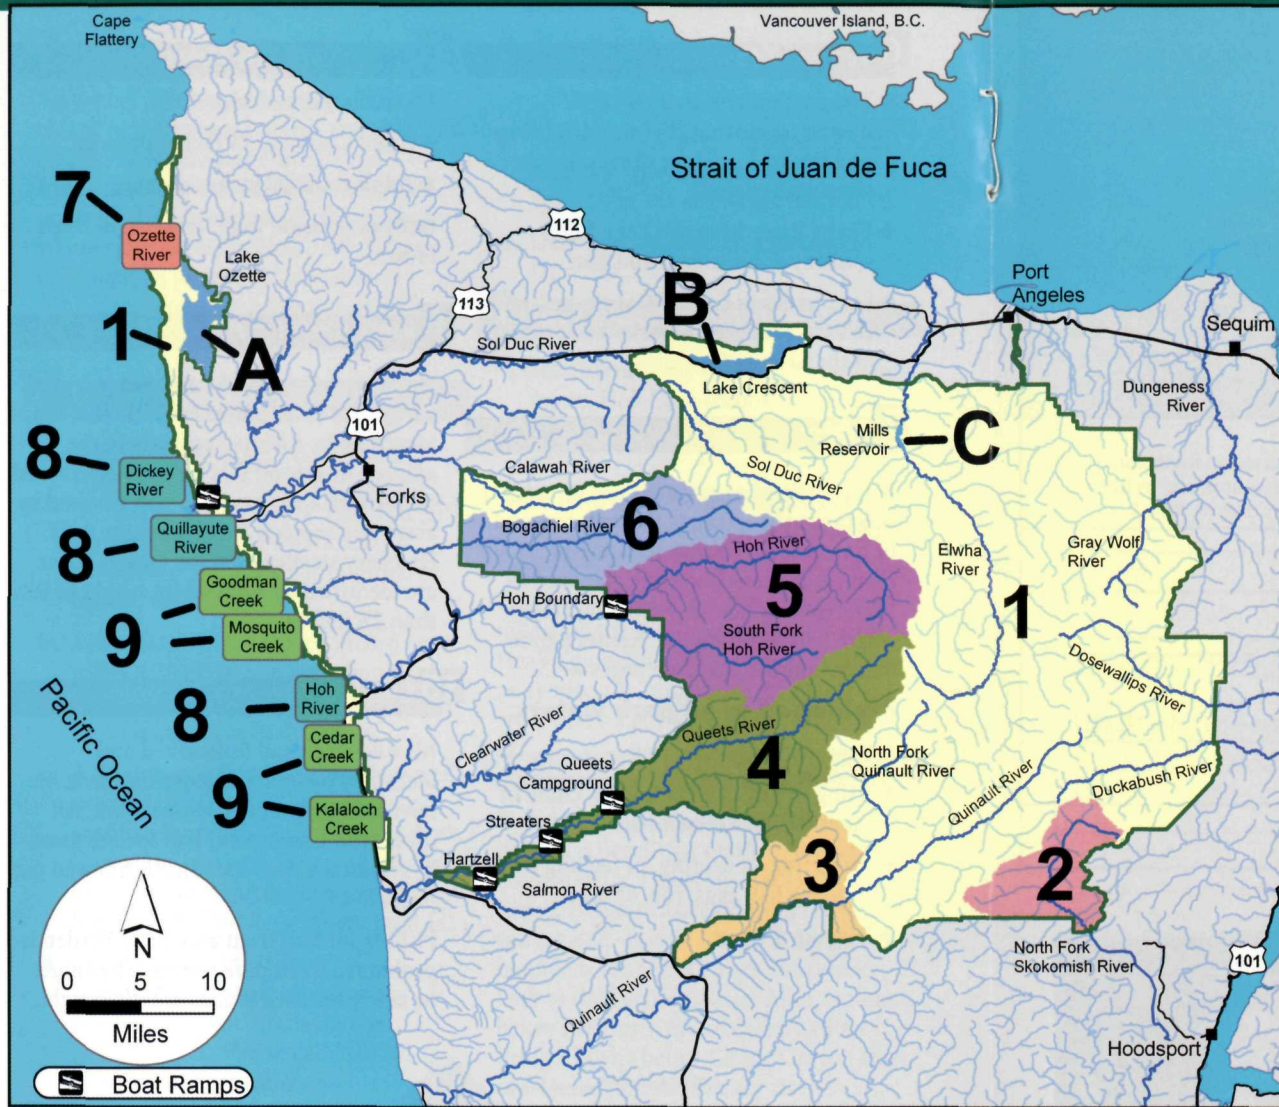

All wild steelhead (unmarked and identified by intact adipose fin) must be released in Olympic National Park. All other wild (unmarked) fish species must be released unless specifically allowed on pages 8–13.

Fishing for bull trout and Dolly Varden is prohibited in all park waters. They must be safely released if accidentally caught.

HELP PROTECT NATIVE FISH ♦ REPORT VIOLATORS

Drainages & Freshwater Fish Regulations

Zone	Drainages (Areas)	Species	Season	Gear	Daily Limit	
1	All beaver ponds, streams, and rivers not listed on page 7 or on this chart. Includes: Dosewallips, Duckabush, Elwha, Gray Wolf, Quinault (East and North forks, mainstem), Sol Duc (North Fork, mainstem), South Fork Calawah Rivers	All species	June 1–Oct. 31	Artificial lure with barbless single point hook	Catch & release Can retain 2 hatchery steelhead	
2	Skokomish River, North Fork	All species	June 1–Sept. 15	Artificial lure with barbless single point hook	Catch & release	
3	Quinault River	All species	June 1–Mar. 31	Artificial lure with barbless single point hook	Catch & release Can retain 2 hatchery steelhead	
4	Queets River, mainstem, below Hartzell boat launch	Salmon	Sept. 1–Nov. 30	Bait, treble, and barbed hooks allowed	Can retain 2 hatchery or wild coho Release all wild Chinook	
		Steelhead	June 1–Aug. 31	Artificial lure with barbless single point hook	Catch & release Can retain 2 adipose clipped hatchery steelhead	
			Sept. 1–Nov. 14	Bait, treble, and barbed hooks allowed	Can retain 2 adipose clipped hatchery steelhead	
			Nov. 15–Feb. 28	Bait, treble, and barbed hooks allowed	Can retain 2 total hatchery steelhead (adipose clipped, ventral clipped, or with dorsal fin height less than 2 1/8 inches)	
		Mar. 1–Apr. 15	Artificial lure with barbless single point hook	Can retain 2 adipose clipped hatchery steelhead		
		All other species	June 1–Apr. 15	All season: Artificial lure with barbless single point hook Sept. 1–Feb. 28: Bait, treble, and barbed hooks allowed	Catch & release	
	Queets River, mainstem, above Hartzell boat launch	All species	June 1–Apr. 15	Artificial lure with barbless single point hook	Catch & release Can retain 2 adipose clipped hatchery steelhead. From Nov. 15–Feb. 28, can retain 2 total hatchery steelhead (adipose clipped, ventral clipped, or with dorsal fin height less than 2 1/8 inches).	
	Salmon River	Salmon	Sept. 1–Nov. 30	Bait, treble, and barbed hooks allowed	Can retain up to 3 coho Release wild Chinook	
			Steelhead	June 1–Aug. 31	Artificial lure with barbless single point hook	Catch & release Can retain 2 adipose clipped hatchery steelhead
				Sept. 1–Nov. 14	Bait, treble, and barbed hooks allowed	Can retain 2 adipose clipped hatchery steelhead
				Nov. 15–Feb. 28	Bait, treble, and barbed hooks allowed	Can retain 2 total hatchery steelhead (adipose clipped, ventral clipped, or with dorsal fin height less than 2 1/8 inches)
		All other species		All season: Artificial lure with barbless single point hook Sept. 1–Feb. 28: Bait, treble, and barbed hooks allowed	Catch & release	

Zone	Drainages (Areas)	Species	Season	Gear	Daily Limit
5	Hoh River and South Fork Hoh River	All species	June 1-April 15	Artificial lure with barbless single point hook Fly fishing ONLY ¼ mile below Hoh Campground to boat launch above South Fork Hoh confluence	Catch & release EXCEPT can retain 2 hatchery steelhead
6	Bogachiel	All species	June 1-April 15	Artificial lure with barbless single point hook	Catch & release Can retain 2 hatchery steelhead
7	Ozette River	All species	Aug. 1-Feb. 28	Artificial lure with barbless single point hook	Catch & release Can retain 2 hatchery steelhead
8	Pacific Coastal Area: Dickey, Hoh, and Quillayute rivers <i>For regulations in Pacific Coastal Area, please see the separately issued annual insert for Olympic National Park fishing regulations or visit www.nps.gov/olym/regs/fishregs.htm.</i>				
9	Cedar, Goodman, Kalaloch, and Mosquito creeks (Pacific Coastal Area)	All species	June 1-Feb. 28	Artificial lure with barbless single point hook	Catch & release Can retain 2 hatchery steelhead
A	Ozette Lake	All species	Last Saturday in April to Oct. 31	Artificial lure with barbless single point hook	Catch & release EXCEPT no daily, size, or possession limits for yellow perch, largemouth bass, pikeminnow, and bullhead <i>See Fish Consumption Advisory, page 6, item 4</i>
B	Lake Crescent	All species	June 1-Oct. 31	Artificial lure with barbless single point hook; 2 ounce weight restriction	Catch & release
C	Mills Reservoir, Elwha	All species	Last Saturday in April to Oct. 31	Artificial lure with barbless single point hook	Catch & release
	High elevation lakes (above 1,300 ft)	Rainbow and cutthroat trout	Last Saturday in April to Oct. 31	Bait, treble, and barbed hooks allowed	5 trout, no minimum size limit
		Eastern brook trout	Last Saturday in April to Oct. 31	Bait, treble, and barbed hooks allowed	No daily, size, or possession limits
	Irely Lake	All species	Last Saturday in April to Oct. 31	Artificial lure with barbless single point hook	Catch & release

Kalaloch Creek outlet

Mussels and barnacles

Fish Species	Minimum Size	Daily Limit	Season
Herring/Sardine/Sandlance/Anchovy/Surf smelt	None	10 pounds all species combined	Year-round
Lingcod	24"	2 but no more than 15 bottom-fish total, regardless of species	April 16-Oct. 15
Rockfish	None	10 BUT only 1 canary rockfish BUT release all yelloweye rockfish No more than 15 bottomfish total, regardless of species	Year-round
Greenling	None	15 BUT no more than 15 bottom-fish total, regardless of species	Year-round
Cabezon	None	2 BUT no more than 15 bottom-fish total, regardless of species	Year-round
Surfperch	None	15 BUT no more than 15 bottom-fish total, regardless of species	Year-round
All other intertidal fish (unclassified)		CLOSED	

Shellfish Species	Minimum Size	Daily Limit	Season
Goose neck barnacles	None	10 pounds whole or 5 pounds stalks	Nov. 1-March 31
Horse clams	None	7 (must keep first 7)	Nov. 1-March 31
Littleneck/butter/manila clams/cockles	1½"	10 pounds in shell or 40 TOTAL clams	Nov. 1-March 31
Mussels	None	10 pounds in shell	Nov. 1-March 31
Razor clams	None	15 (must keep first 15)	To Be Announced
Dungeness crab	6"	6 males only BUT NO soft-shell crabs	Pots: Dec. 1-Sept. 15 Other gear: year-round
Red rock crab	5"	6 of either sex BUT NO soft-shell crabs	Pots: Dec 1.-Sept. 15 Other gear: year-round
Abalone, Geoducks, Octopus, Oysters, Sand shrimp, Scallops (all species), Sea cucumbers, Sea urchins (all species), Shrimp (all species), all other intertidal invertebrates (unclassified)		CLOSED	
<i>No harvest of any fish or invertebrates for bait</i>			

Identify Olympic's Native Fish

Cutthroat Trout—CT

- ◆ dark spots on light background
- ◆ only species with red slash on lower jaw

Distribution: parkwide

Regulation: catch & release only; see regulations for Pacific Coastal Area

Bull Trout—BT

- ◆ back and sides olive-green to brown with cream spots
- ◆ light spots on dark background
- ◆ clear dorsal fin

Distribution: parkwide except Bogachiel, Dosewallips, Duckabush, Ozette

Regulation: fishing prohibited

Steelhead Trout—ST

- ◆ no red slash on lower jaw
- ◆ reddish stripe often along the side

Distribution: parkwide except Dosewallips, Duckabush, Elwha, North Fork Skokomish

Regulation: catch & release only for all wild steelhead; can keep 2 hatchery steelhead
See page 7, item 9 for details about identifying hatchery steelhead.

Chinook Salmon—CH

- ◆ black gums around the teeth and lower jaw
- ◆ spots on both lobes of the tail

Distribution: parkwide except Dosewallips, Duckabush, Elwha

Regulation: catch & release only; see regulations for Pacific Coastal Area

Mountain Whitefish—MW

- ◆ small mouth oriented towards stream bottom
- ◆ no teeth
- ◆ large scales

Distribution: parkwide except Dosewallips, Duckabush, Elwha, Ozette

Regulation: catch & release only

Non-native Fish

Fisheries biologists at Olympic National Park are increasingly concerned about the effects of non-native fish on native fish communities. Mountain lakes had no fish until they were stocked between 1913 and 1975. At least 10 different fish species were planted via helicopter, airplane, horses, and by backpackers. More than 14.5 million fish were planted into Lake

Crescent alone. Today, non-native brook trout and non-indigenous rainbow trout occur in 5 of 12 major watersheds in the park. These non-native fish significantly threaten native fish, particularly the federally threatened bull trout.
