National Register of Historic Places
Registration Form

This form is for use in nominating or requesting determination for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and area of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900A). Use typewriter, word processor or computer to complete all items.

Narrative Description

(Describe the historic and current condition of the property on one or more continuation sheets.)

Summary: Happy Four Shelter is a square, 1-story, wood building with a wood-shaked, modified gable roof set on a stone foundation. The shelter is located in a forested setting near the Hoh River Trail, north of the Hoh River, within Olympic National Park. The shelter is in good condition and there are only minor alterations that have occurred to it. This shelter appears much the same as it did after construction by the United States Forest Service. It is an example of two property types identified in the Multiple Property Documentation form for the Historic Resources of Olympic National Park: Government (Forest Service) and Architecture (Log, Pole, and Shake). The building has integrity of location, setting, design, materials, workmanship, feeling, and association, and meets the registration requirements set forth in the Multiple Property Documentation form.

8. Statement of Significance

Applicable National Register Criteria

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- ☒ **A** Property is associated with events that have made a significant contribution to the broad patterns of our history.
- ☐ **B** Property is associated with the lives of persons significant in our past.
- ☒ **C** Property embodies the distinctive characteristics of a type, period or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- ☐ **D** Property has yielded, or is likely to yield, information important in prehistory or history.

Areas of Significance

(Enter categories from instructions)

Criterion A: Politics/Government

Criterion C: Architecture

Period of Significance

circa Mid-1930's

Criteria Considerations

(Mark "x" in all the boxes that apply.)

Property is:

- ☐ **A** owned by a religious institution or used for religious purposes.
- ☐ **B** removed from its original location.
- ☐ **C** a birthplace or grave
- ☐ **D** a cemetery.
- ☐ **E** a reconstructed building, object, or structure.
- ☐ **F** a commemorative property.
- ☐ **G** less than 50 years of age or achieved significance within the past 50 years.

Significant Dates

circa Mid-1930's

Significant Person

(Complete if Criterion B is marked above.)

Cultural Affiliation

Architect/Builder

United States Forest Service

Narrative Statement of Significance

(Explain the significance of the property on one or more continuation sheets.)

9. Major Bibliographical References

Bibliography

(Cite the books, articles, and other sources used in preparing this form on one or more continuation sheets.)

- ☐ **Previous documentation on file (NPS):**
- ☐ preliminary determination of individual listing (36 CFR 67)

Happy Four Shelter: Jefferson County, WA

Page 1

Narrative Description: Happy Four Shelter was constructed by the U.S. Forest Service in the mid-1930s. It is sited in a forested area along the Hoh River Trail, near the trail and north of the river. This building is square in shape, measuring 14' x 14' in size. It is 1-story in height, built of log-frame wall construction with shake siding. It is three-sided, with the front of the shelter open to the elements. The gable roof is modified and appears as two shed roofs put together with the back (rear) side extended above or overlapping the other, and sheathed in cedar shakes. Hewn log rafters appear in the roof extension. The building's sill logs sit on a stone foundation. There is no floor, and the bunk beds were removed in 1978 or 1979. Known alterations to the building are the removal of shingles on a section of the rear wall to create an opening for light, which is covered over with a corrugated plastic sheet; and cedar shakes have been replaced in-kind on the roof due to deterioration.

Happy Four Shelter continues to exhibit the qualities of its original design and method of construction as built by the United States Forest Service in its effort to complete an extensive trail and shelter network across national forest lands on the peninsula in order to protect valuable stands of timber. It is a representative example of the types of buildings and structures built in the backcountry by the USFS. Using local, natural materials in a straightforward, functional manner, the USFS designed and built dozens of these backcountry log and shake trail shelters for the purpose of assisting rangers in their fire-fighting and timber management efforts. Later, these shelters were used by travelers in the backcountry for their overnight stays. It retains a high degree of integrity in its location, setting, design, materials, workmanship, feeling, and association, and exhibits the registration requirements for Log, Pole, and Shake buildings identified in the Multiple Property Documentation form for the Historic Resources of Olympic National Park.

SEE ATTACHED INVENTORY CARD PREPARED IN 1982 FOR PROPERTY.

Statement of Significance:

Summary: Happy Four Shelter is significant for its association with politics and government activities within what is today Olympic National Park (criterion A) and as an example of the distinctive type of Log, Pole, and Shake architecture as executed by the United States Forest Service (criterion C). Built in the mid-1930s, this building is representative of the types of buildings that the United States Forest Service constructed to accomplish one of its objectives on the Olympic Peninsula--protecting the valuable stands of timber the agency was charged with managing on these federal lands, and providing safe havens for their forest rangers in undertaking their work. Later, the USFS recognized the value and importance of these structures to recreationists visiting the backcountry of the Olympics, and advertised the shelters to this growing population of forest users to ensure their safety. This building exemplifies USFS architectural design and style through its use of local, natural materials applied in a manner that is functional and straightforward to address an immediate need, but which is also sensitive to the surrounding environment so as not to have an obtrusive visual impact. The shelter is indicative of two property types identified in the Multiple Property Documentation form for the Historic Resources of Olympic National Park: Government (Forest Service) and Architecture (Log, Pole, and Shake). It has integrity of location, setting, design, workmanship, materials, feeling, and association, and meets the registration requirements set forth for these properties in the Multiple Property Documentation form.

Narrative: As road construction and recreational development invited a broader public to venture to the Olympic Peninsula, its earlier reputation as an untamed wilderness diminished. Accessibility provided by the loop highway encircling Mount Olympus National Monument was only one agent in the opening of the interior wilderness to recreational pursuits. Beginning in 1905 and continuing for 33 years, lands now included in the inland portion of the national park were under the administrative jurisdiction of the United States Forest Service. Although multiple resource management was, and is today, the underpinning of the USFS administrative policies, timber management received particular emphasis in the Olympics. Following the appointment of Rudo L. Fromme as Olympic Forest Supervisor in 1911, plans were initiated to develop a comprehensive trail system to facilitate management of timber and other resources, with the specific concern of forest fire prevention and suppression. This trail system included shelters, houses, sheds, and phone lines to assist the forest rangers in their fire suppression work.

Although most trails and shelters were not built with the visitor in mind, the expanding network of USFS trails provided the growing number of hikers, hunters, and fishermen with access to the interior mountainous sections of the Olympic Peninsula. Under the leadership of the forest supervisors, many miles of trails and numerous shelters were built on federal lands. Trail construction accelerated over the years and by 1930 approximately 110 miles of trails were in place to protect the resources of the federal lands and to insure safety for the traveling public. Shelters augmented trails; before 1933, when Mount Olympus National Monument was administered by the Forest Service, it was estimated that approximately 90 shelters were built. Although they were primarily for use by forest officers who maintained trails and telephone lines, shelters were left open for use by the traveling public. By the mid-1930s, after hundreds of miles of trails and numerous shelters were constructed, the USFS actively promoted the trails' recreational use. Specifically placed 4 to 5 miles apart from each other, these buildings came to the aid of many individuals in the backcountry.

The United States Forest Service maintained a traditional pattern of shelter distribution along the trails, in accordance with the USFS's plans for the backcountry. By the time the national monument was transferred to the administration of the National Park Service in 1933, the Forest Service had spent nearly \$12,000 on recreational improvements in the region. Many of the late 1920s and early 1930s Forest Service-type shelters were removed by the National Park Service in the mid-1970s because of changing management philosophy with regard to structures in the backcountry and safety issues due to deteriorated structures. Happy Four Shelter is one of ten historic shelters being proposed for listing in the National Register.

Happy Four Shelter is significant for its association with USFS efforts to protect the valuable stands of timber under its stewardship by creating a vast network of trails, shelters, and other buildings and structures to assist forest rangers in getting access and supplies into the backcountry (criterion A). This was a tremendous effort in terms of human and fiscal resources. Later, the Forest Service advertised the value and importance of these backcountry shelters for visitor safety and enjoyment, but this was not their original intent and purpose. This

Page 3

building is also a noteworthy example of a type, style, and method of construction incorporating logs, poles, and wood shakes, reflecting United States Forest Service design used throughout the national forests of the Pacific Northwest (criterion C). It is a functional building with a specific purpose, and its design and method of construction reflects this purpose and function yet the result is a building that is sensitive to its natural surroundings. The use of natural materials requiring only limited manipulation, and its siting, scale, and massing all represent aspects of Forest Service design and construction techniques for these simple, straightforward functional structures found in the backcountry. It is an example of two property types identified in the Multiple Property Documentation form for the Historic Resources of Olympic National Park: Government and Architecture. It retains a high degree of integrity in its location, setting, design, materials, workmanship, feeling, and association, and meets the registration requirements set forth in the Multiple Property Documentation form.

3. DESCRIPTION AND BACKGROUND HISTORY INCLUDING CONSTRUCTION DATE(S), PHYSICAL DIMENSIONS, MATERIALS, MAJOR ALTERATIONS, EXTANT EQUIPMENT, AND IMPORTANT BUILDERS, ARCHITECTS, ENGINEERS, ETC.

Constructed near the bank of the Hoh River, Happy Four Shelter was one of dozens of shelter structures erected by the U.S. Forest Service in the 1930s on National Forest and National Monument land. Typical of shelter location patterns, Happy Four Shelter was one of five shelters or ranger/guard stations spaced at regular intervals on or near the Hoh River. In the late 1930s, the other structures on the Hoh River included, Jackson (Hoh) Ranger Station, Mt. Tom Shelter, Olympus Ranger Station and Olympus Shelter. The U.S. Forest Service, which had jurisdiction over much of the area now included in Olympic National Park from 1905 to 1933, initiated shelter construction in the late 1920s and the 1930s. Shelter construction coincided with a period of active trail construction by the Forest Service. Shelters were at first intended for use by crews building and maintaining trails and laying telephone lines for fire protection purposes. As part of the Forest Service's multiple land use management policy, trails and shelters served to encourage back country recreational use in the interior Olympics. In the 1930s, CCC corpsmen under the supervision of the Forest Service, accelerated shelter and trail construction activity. By the late 1930s nearly 90 shelters stood on the Olympic Peninsula. The greatest abundance of shelters built in the 1930s occurred on the north and east facing slopes of the Olympic Range. During this initial period of construction, shelters were built primarily in lowland valleys along major rivers and creeks, and sited at locations where the fishing and scenery was attractive. In some instances (particularly along the Bogachiel River), shelters supplanted or augmented

existing ranger or guard stations, or were constructed at existing popular hunting or fishing "camps" (especially along the Elwha River). Typically, shelters stood from three to five miles apart on established trails. Architecturally, these Forest Service-built shelters dating from the 1930s were made from local materials obtained from the building site, were constructed of peeled-pole or split-cedar lumber sheathed with cedar shakes, and were capped with gable or shed, cedar shake roofs. Shelters were three-sided, and roomy enough to provide several people protection from the inclement weather typical on the peninsula. Significant numbers of the late 1920s and 1930s Forest Service-type shelters were taken down in the mid 1970s, and in 1984 fewer than twenty remain standing.

16. SIGNIFICANCE Happy Four Shelter is eligible for listing in the National Register of Historic Places. Historically, it represents a period in the history of Forest Service land management when policy concerns and planning focused heavily on fire protection through trail, lookout, and shelter construction, and on encouraging recreational use in the back country. Unlike many 1930s' Forest Service shelters on the Olympic Peninsula that have been destroyed or succumbed to severe deterioration or vandalism, Happy Four Shelter retains much of its original exterior fabric. In some instances, original materials have been replaced with like materials. Consequently, Happy Four Shelter possesses integrity of design, materials, workmanship, feeling, and association.
