DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Victoria Mine is located approximately four miles north of the international boundary between the United States and Mexico. Surviving structures at the site include a dilapidated stone building, a rock lean-to shelter, a concrete cistern, a stone stairway, some headframe timbers, and a large shaft hole covered by the National Park Service. The stone building was evidently the store built around 1900 by Mikul G. Levy. Its sheet iron roof is now gone. The building measures roughly 21 feet by 16 feet. Its walls are 30 inches thick and are made of granite with mud and gravel chinking. Originally the structure stood about 6 feet high, but 2 more feet were added at the front to allow for the placement of a flat, sloping roof. Records indicate that, in addition to the above structures, the site was once occupied by a boarding house and kitchen, a bunkhouse, a blacksmith shop, two adobe buildings, and a corral.

STATEMENT OF SIGNIFICANCE

Victoria Mine is one of the oldest known examples of mining activity in the country immediately adjacent to the United States-Mexican border in southwestern Arizona and symbolizes one of the first American enterprises to penetrate this part of the inhospitable Sonoran Desert. It is of regional historical significance.

The earliest history of Victoria Mine is obscure. One account holds that the surface vein was discovered by an American sometime around 1880, while another is that Spaniards mined the site centuries ago. Cipriano Ortega, a border outlaw turned entrepreneur, acquired the site around 1880 and called it "La Americana," probably because of its position north of the boundary. Ortega reportedly extracted large quantities of silver ore before abandoning the site. In 1899 Mikul G. Levy obtained the mine and renamed it the Victoria after the wife of one of his helpers. Levy operated the mine intermittently over the next four decades.

In the course of his enterprise at Victoria, Levy reopened the shaft and prepared to extend it, but shortly before 1910 he encountered water and was forced to close down temporarily. To meet operating costs, he sold shares in the Victoria and filed other claims in the vicinity of the mine. In 1924 Levy's holdings were incorporated in the Victoria Mining and Smelting Company, and in the 1930s the claims at Victoria were leased to independent developers. One group left the scene in 1936, finding it difficult to penetrate beyond the water level in the original shaft. Three years later Levy hired a caretaker to watch the mine, which was not worked again until after his death in 1941. Since then, numerous persons have worked the Victoria without much success. Probably Cipriano Ortega benefited most from the mine. Mikul Levy extracted only about \$30,000 in ore during his entire tenure of ownership and interest there, while subsequent claimants have realized but approximately \$10,000 total.

Today Victoria Mine is part of Organ Pipe Cactus National Monument. The historic values requiring preservation are the ruined stone building, once operated as a store by Levy, and the historic scene. The remains of other appurtenances are located at the site, although these appear to be the vestiges of more recent activity at the mine. Today there are private mining claims held on the Victoria site.

VERBAL BOUNDARY DESCRIPTION

Starting at a 6" x 6" claim marker located approximately 180 feet east of the stone building, the approximate property line proceeds northerly for roughly 310 feet to a rock monument. It then travels westerly approximately 450 feet, then southerly for about 320 feet to a claim marker near a prospect hole. The line continues southerly for 300 more feet, then moves easterly for about 400 feet. It then turns north for 210 feet to reach the first-mentioned claim marker for Victoria # 4. Measurements were taken with a ten-foot wheel. Corners are marked with 2" x 2" stakes.
