NATIONAL SURVEY OF HISTORIC SITES AND BUILDINGS THEME XVIIa - AGRICULTURE AND THE FARMER'S FRONTIER

REPORT ON THE HISTORICAL INVESTIGATION OF

THE NELSON PIONEER FARM

NEAR OSKALOOSA, IOWA

Prepared by

Merrill J. Mattes
Acting Resource Studies Advisor
Midwest Regional Office
National Park Service
Omaha, Nebraska

December, 1964

INTRODUCTION

On October 10, 1964, Mrs. Stillman Clark, 1303 - 9th Avenue East, Oskaloosa, Iova, President of the Mahaska County Ristorical Society, wrote to the Hon. John Kyl, House of Representatives, Washington, D. C., mentioning the Helson Pioneer Ferm and recommending that it be considered as a Registered Mational Historic Landsark. On August 13 Congressman Kyl wrote to the Director eaking for a Mational Park Service investigation of the site. On August 24 Assistant Director Thompson wrote Mr. Kyl that this study would be handled by the Midwest Regional Office.

In accordance with a suggestion contained in memorandum of August 21 from Chief Historian Porter, Weshington Office, arrangements were made for an investigation of the site by Merrill J. Mettes, Acting Resource Studies Advisor.

The field investigation was made on September 25 in a one-day trip from Casha to Oskoloosa. At that time, Mr. Mattes met with Mrs. Clark and several of her Board members at the Melson Pioneer Ferm, which is six miles northeast of Oskaloosa and accessible bia U. S. Highway No. 63 and the "Glandale Boad." At this meeting, there was opportunity for a leisurely discussion with the County Historical Society officials on the purpose and procedures relating to the National Survey, and there was then opportunity to make detailed inspection of the Ferm.

The Mahaska County Mistorical Society and its officers deserve only the highest commendation for their enthusiastic efforts to conduct a progress of site preservation, and their remarkable success in making the Farm a center for historical and cultural activities in Mahaska County.

HISTORY OF THE SITE

The Nelson Pioneer Farm, with its surviving structures, is one of the oldest in the southeast quarter of Iowa. Daniel Nelson and his wife, natives of Butler County, Ohio, migrated west in 1841, reaching Mahaska County in 1844. They sequired 150 acres of virgin farm land, which was augmented in 1847 by purchase of the north 160 acres, making a total farmstead of 310 acres. This land was farmed continuously by the Melson family for 114 years, or until 1958, at which time Boy Nelson and his sister, Lillian, both died without issue.

Being public-spirited citizens, proud of their heritage, and members of long standing of the Mahaska County Historical Society, Roy and Lillian Melson bequesthed the entire farm to the Historical Society, stipulating that the structures, particularly the brick home, be preserved intact as a memorial to the family. In addition to the donation of land, there was an endowment of \$100,000. Of this, \$60,000 has been set aside as an endowment fund, while \$46,000 has been sermarked for a museum.

The Farm is now a County Ristoric Site consisting of 310 acres. The farm portion is rented, and the income utilized for historical purposes. Forty acres are in native timber, which is to be retained as a wildlife refuge. Twelve acres, embracing the old structures and the new museum, are declared to be the "Museum Area," constituting the headquarters of the Society and the Farm site as a non-profit educational institution.

In addition to historic structures discussed in the following section, the building complex today includes a new cement-block structure, handsomely designed, which will constitute the museum and headquarters of the Mahaska County Historical Society, featuring exhibits which will relate primarily to Indians and to pioneering. The Society is proud of this museum as "the first rural pioneer cultural center in the state of Iowa."

HISTORICAL REMAINS

L. Daniel Nelson Home. This is the two-story, five-room brick house, in a fine wooded setting north of the road, which was built in 1853 for Daniel Nelson by Thomas Binns. Material used included native timber framing and bricks from a kiln on a nearby farm. The wells are up to a foot in thickness. The rooms are identified as living room, parlor, two upstairs bedrooms, and kitchen to the rear. Fireplaces are to be found in all the rooms but the east room upstairs. In addition, outbuildings include a summer kitchen and a woodshed.

When acquired by the Society, the building was in good condition, efter a century of loving care by the Nelson family; however, a great deal is needed to put the building in a state of true restoration, including interior furnishings. This project is going forward, and the work of restoration is about 75 percent complete. A composition roof detracts from the effectiveness of the restoration; this, of course, can be remedied eventually through the provision of a shingle or shake roof. A good percentage of the furnishings were provided by the Nelson family.

2. The Nelson Barn. To the north of the above-mentioned home, across the road, is a barn of substantial dimensions, built in 1856 by the proprietor from native timber right on his own property. The framing and most of the siding and roofing purport to be original materials. The skill of native corpentry is clearly evident. Peatures of the barn include east and west lofts, stairs, and a connecting catwalk.

The barn is to be used by the Society for the display of farm objects, particularly those associated with the farming activity. An impressive collection has already been assembled, and a program is going forward for further acquisition and for conditioning of specimens.

3. Log Cabin. The third historic structure, which completes the complement of historic buildings, is a log cabin to the east of the barn. The criginal Melson double cabin stood here, but has

long since disappeared. The substituted cebin is a transplanted 1867 log cebin of pioneer Benjamin Littler, which stood in 1962 in the vicinity of Bussey, Iova. As restored by the Society and with a gradual program for restoration of furnishings, this is an excellent display parteining to the period of 1844 to 1853, prior to the Nelsons' occupation of the brick home.

It is planned that, surrounding the structure, there will be an orchard and flower and vegetable gardens reflecting produce of the period. A rail fence adjoining this cabin purports to be over 100 years old.

4. Proposed Restorations. In addition to the above three existing structures, the Mahaska County Historical Society plans the following: a blackmath shop and carriage shed; a children's farm; and an Indian village "honoring the Iovey Indians and their noted Chief, Mahaska." In addition to this, it is contemplated that the modern museum, in addition to static exhibits, will contain facilities for handicrafts and other pioneer skills, to be precticed by schoolchildren and Americans hopbyists.

BIBLIOGRAPHY

Interview on September 25, 1964, with Mrs. Stillman Clark and associated officers of the Mehaska County Historical Society.

Data sheet on the Nelson Pioneer Ferm provided by the Mahaska County Historical Society.

BOGGSVILLE, COLORADO

Location. About $1\frac{1}{2}$ miles southeast of Ias Animas, Colorado.

Ownership. Private ownership. It is understood that the State Historical Society of Colorado plans to acquire this site.

Significance: Boggsville, Colorado is the site of the first successful experiments in irrigation in Colorado and perhaps east of the Rocky Mountains. It was at Boggsville in 1867 that Thomas O. Boggs, John W. Prowers, Robert Bent and several others constructed a seven mile canal, known as the Terbex Ditch, on the Purgatoire, a branch of the Arkansas River. The canal irrigated some 1,000 acres on the farms of Boggs, Prowers and Bent. The experiment proved a suncess. Boggs succeeded a selling much of his crops, produce and livestock to the nearby Fort, you established at its present location in 1867.

Present __atus. Only two significant structures remain in Boggsville. One of these is the adobe home of Thomas Q. Boggs which was built in 1866. It appears to have undergone few alterations. The second building is a section of a two-story house of 24 rooms, which belonged to John W. Prowers, who was a prominent cattleman, businessman and politician in Eastern Colorado.

References. C. W. M. rd, Boggsville, Cradle of the Colorado Cattle Industry (n.p., 1957)

Thomas O. Boggs house erected in the early 1860's at the town of Boggsville, Colorado. It was here that Boggs and others made their first successful experiments in irrigation in Colorado.

Although an attempt was made earlier, one of the first permanent settlements in Colorado was that made in 1851 at San Luis de la Culebra, now known as San Luis.

Soon after the San Luis was established, the settlers dug an irrigation ditch to assure the production of food for the inhabitants. Many of the descendants of the original settlers still live in San Luis. The irrigation ditch dug in 1851 is still flowing. The State Historical Society of Colorado has placed a marker at the site.

The San Luis People's Ditch, original construction April 10, 1852, is listed as having priority No. 1 as the oldest in Colorado, in the Adjudication Decree, granted by the Court in Costilla County. The State Engineer's Office lists the following ditches in the order of their priority:

was very popular and it was only by sharp political trickery that they prevented him from receiving the Republican nomination for Congress in 1874 and for governor a year later. As the result of this lack of support from his party, Weaver swung to the "independents" or "Greenbackers." As a Greenbacker, Weaver won a seat in Congress in 1878, ran for President in 1880, was defeated for Congress in 1882, but won in 1884 and 1886.

When later the Farmers Alliance succeeded the Greenbackers as the chief exponents of soft money, Weaver became identified with that party and took a leading part in transforming it to the Populist organization. In 1889, he moved from Bloomfield to Des Moines, where he was editor of the Farmers Tribume. With little opposition, he received the Populist nomination for President in 1892. Although Weaver's defeat was inevitable, he received a popular vote of over a million and 22 votes in the electoral college. Professor J. D. Hicks characterized him as follows:

Less versatile than the eccentric Bonnelly, James B. Weaver of Towa inspired far greater confidence among those who, while thoroughly deploring existing conditions, were fearful of anything that savored of extreme radicalism...1

When the Populists fused with the Democrats, Weaver gave his support to the soft money forces in that party. In 1896, he supported the nomination of William J. Bryan for the Presidency. Fusion sounded the death knell to the Populist, and Weaver, with the other Populist leaders, found himself without a future. About 1900, he moved to Colfax, Iowa, where he spent the last years of his life. There the people chose him for their mayor. In July, 1858, he married Clara Vinson, a school teacher, who had come to Iowa from Chio; they were the parents of five girls and two boys. Weaver died February 6, 1912.

THE WEAVER HOME: The Weaver Home in Bloomfield is a two-story brick structure. It has undergone few apparent exterior changes except that the original front porch has been removed and a frame sun room has been added on the southeast corner. In 1915, the Weaver Home was acquired by the Davis County Chautoqua Association. Now occupied by the owner, the building has undergone only minor interior alterations. The Rebecca Lodge, an affiliate of the I. O. O. F., which was founded in Bloomfield, Iowa, has plans to acquire the Weaver Home for a Rebecca Museum.

is an excellent specimen, which is being appropriately furnished.

The Mahaska County Historical Society has also nearly completed, just west of the barn, a fine modern cement-block two-level museum building which will serve as their society headquarters and museum, containing exhibits relating primarily to Indians and pioneer life. Plans also include reconstruction of a typical blacksmith shop and carriage shed, a "children's farm," and perhaps "an Indian village honoring the Ioway nation and its noted Chief Mahaska."

When items are continued they should be listed, if possible, in numerical order of the items. All information given should be headed by the item number, its name, and the word (cont'd), as, 6. Description and Importance (cont'd)...

STATE NAME(S) OF SITE

Lowa Seaman A. Knapp - James Wilson Home

The Rice Growers' Association was organized and he served as its president.

When James Wilson (see below) became Secretary of Agriculture, Knapp was appointed special agent for the promotion of farming in the southern states. He was sent to China, Japan, and the Philippines to investigate rice varieties, its production and milling. His findings resulted in a great expansion in the rice industry. When in 1903, the Mexican boll weevil appeared in Texas, Knapp contributed much to the education of cotton farmers in combatting that insect. Knapp also inaugurated the Farmers Cooperative Demonstration Work in the U.S. Department of Agriculture, which was designed to place object lessons before the farm masses. Under his direction before his death, hundreds of experienced agents were employed throughout the South to assist in this work. Knapp died in April, 1911, and was buried in Ames.

Born in Ayrshire, Scotland, August 16, 1836, James Wilson emigrated with his family to America in 1851. The family first settled in Connecticut, moving in 1855 to a farm at Tama County, Iowa. Young Wilson early chose farming

as his life work. After holding a number of local and state offices, he served three terms in Congress, after which he returned home and engaged in farming for seven years.

In 1891, he was appointed professor of agriculture and head of the experiment station at Iowa State College, where, with the assistance of Charles F. Curtis, who succeeded him as dean of agriculture, he placed agricultural instruction on both a practical and scientific basis.

In 1897, Wilson began his 16 years as U. S. Secretary of Agriculture, under Presidents McKinley, Theodore Roosevelt, and Taft, the longest term of service of any secretary of this department. Under Wilson's direction, the activities of the Department of Agriculture were extended in many fields. Experiment stations were established throughout the United States. Farm demonstration work was begun in the South, and Cooperative extension work in home economics and agriculture was begun. An army of experts were employed to conduct research in agriculture and obtain information all over the world for the promotion of agriculture. Legislation relating to insect pests, plant and animal diseases, forestry, conservation, irrigation, roadbuilding and agricultural education was enacted.

Following his retirement in 1913, Wilson returned to Tama County.

After investigating and reporting upon agricultural conditions in Great Britain

SITE OF EXCEPTIONAL VALUE

GEORGE WASHINGTON CARVER NATIONAL MONUMENT

Location. Near Diamond, Missouri.

Significance. George Washington Carver National Monument is the birthplace of George Washington Carver and commemorates the achievements of this scientific leader. Born in slavery, Carver became one of the recognized scientists in agriculture and earned world wide fame. For 47 years he served at the Tuskagee Normal and Industrial Institute for Negroes in Alabama. Carver made significant contributions toward balanced economy in that region. He also made important contributions in the utilization of plant products for plastics and other uses.

Remains. This monument consists of 210 acres which contain a large portion of the old Diamond Grove Plantation. All of the existing buildings were erected about 1916. The monument also includes the traditional birthplace log cabin site and the dwelling of Moses Carver who was George Washington Carver's owner.

Restored portion of Fort Owen near Stevensville, Montana. It was near here that the whitemen, under the leadership of Father De Smet in the early 1840's, made his beginnings in agriculture in the region.

SITE OF EXCEPTIONAL VALUE

HOMESTEAD NATIONAL MONUMENT

Location. Near Beatrice, Nebraska.

Significance. Homestead National Monument is the site of the first claim under the Homestead Act of 1862. This area also commemorates the land policy which accelerated the settlement of the plains area of the United States. This site was purportedly filed on by Daniel Freeman shortly after midnight on January 1, 1861. His entry was listed as No. 1 in the local land office and was granted Patent No. 1, dated September 1, 1869 by the United States Office.

The Homestead Monument played an important role in hastening the settlement of large segments of the United States. By this act any head of a family or person 21 years of age or over, who was a United States citizen or who had declared an intention to become one, could enter a claim for 160 acres of the public domain. The settler was required to reside on the land five years before he became the owner. The Homestead Act was subsequently modified to permit persons to take more than 160 acres in the drier sections of the plains where that amount was not an adequate farm unit. Public lands were withdrawn from homesteading except in special cases. In 1935 the chief states in which settlement was hastened by homesteading were Kansas, Nebraska, North Dakota, South Dakota and Montana.

The principal feature of Homestead National Monument is the pioneer homestead log cabin erected in 1867, which was moved to the monument from a neighboring township. Native grasses have also been restored to the area.

ANALYSIS OF SITES

Agriculture has been the most important single industry during the second half of the 19th century in the region east of the 98th meridian comprising Region Two of the National Park Service. Despite the fact, little has been done to preserve historic sites associated with the story of the Farmers' Frontier. Numerous "first houses" and pioneer structures have been preserved by cities and towns throughout the Region. Many of these are used as museums. However, in practically every instance, these are memorials designed to emphasize pioneer life rather than interpret the story of the Farmers' Frontier.

During the 20th century, the agricultural frontier has greatly changed. Mechanization and improvements in agricultural techniques have all combined to revolutionize farming. Throughout the entire agricultural belt, it would be difficult to find a farmstead which bears any great semblance to the typical farm unit of the latter part of the 19th century. Actually, the various aspects of the farming frontier are to many and too complicated to be interpreted in a single area or in several areas.

Although the agricultural heritage played an important part in the history of the Great Plains states, little attempt has been made in preserving sites associated with this subtheme. The National Grange has preserved the Minnesota home of one of its founders, Oliver H. Kelley. Colorado has plans for developing the remains of Boggsville where early successful experiments were made in irrigation. Montana is reconstructing Fort Owen, near which the first attempts at farming

by the white men was undertaken in that state. The National Park
Service has two areas which interprets various aspects of the story
of the Farmers' Frontier. Homestead National Monument, in Nebraska,
tells the story of the homestead movement and its impact on the
development of the Trans-Mississippi West. George Washington Carver
National Monument memorializes George Washington Carver, who made
significant scientific contributions in agriculture, particularly in
the development of plastics.
