

The White House Grounds and Gardens
2004–2008

The White House Grounds and Gardens
2004–2008

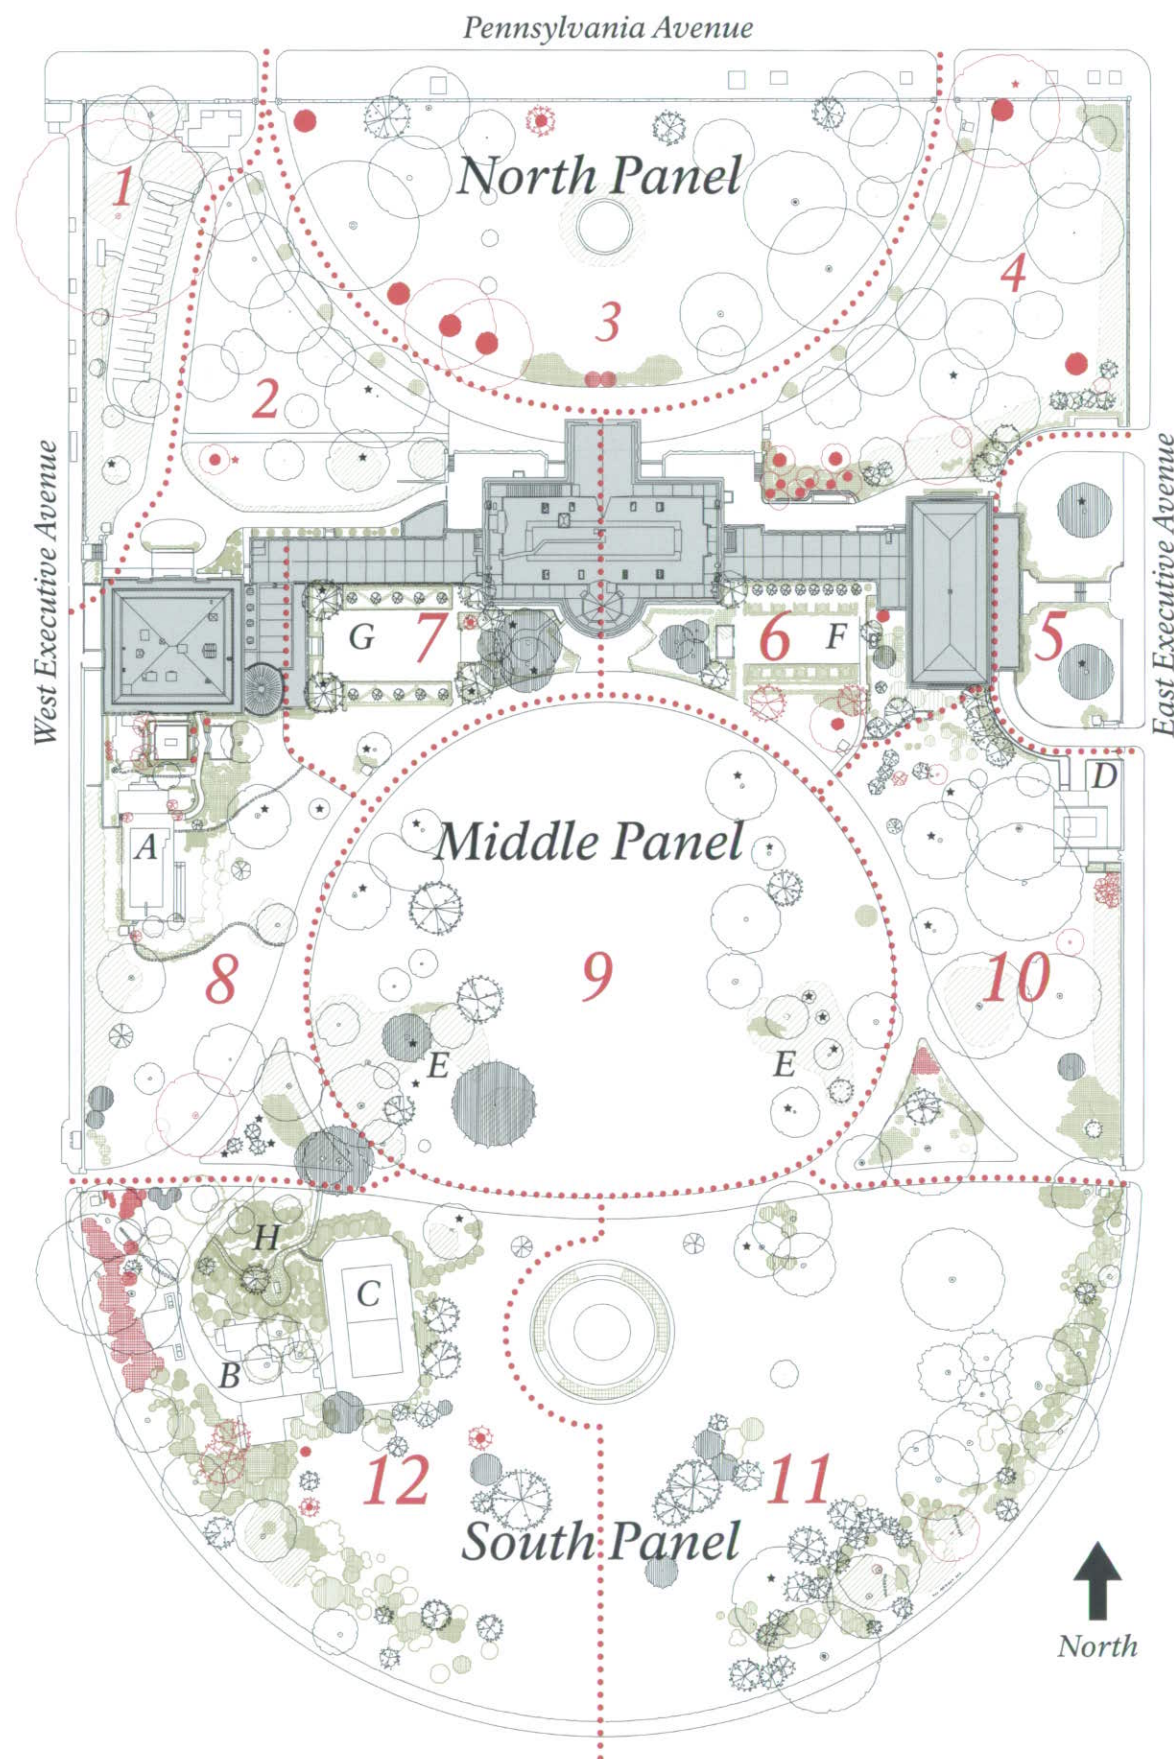

Preface

The White House grounds and gardens are a living monument. The landscape character has evolved through many administrations, covering more than 200 years. These grounds and gardens change with the seasons and are continually improved by human hands.

It is, therefore, important to document for future generations one of the most famous gardens in the world. This booklet records for posterity the image of the White House grounds during the second term of the George W. Bush administration, 2004–2008. It supplements previous volumes published for 1976–1980, 1980–1984, 1984–1988, 1988–1992, 1992–1996, 1996–2000, and 2000–2004.

The White House Grounds

2004–2008

North Panel

- 2005

On Arbor Day, commemorative planting by President Bush included a hybrid American chestnut. This chestnut was propagated as a second generation, first back-cross tree. Section 4 / Tree 8

After a long decline, a fern leaf beech, planted by Mrs. Nixon in 1972, was removed on June 18. Section 2 / Tree 10

In anticipation of a construction project, two fern leaf beech trees were removed from the east tradesman bank. One was in decline, and the other was relocated to the Nixon site. Section 4 / Trees 13, 14

The azaleas and hawthorns on the east tradesman bank were removed for construction in August. Section 4 / Shrubs 8,10,12 / Trees 17-22

Plantings adjacent to the press room were removed during construction. New plantings installed in October include William Penn barberry, nandina, and Japanese hollies flanking either side of the entrance. Section 2, Shrubs 7, 14, 17
- 2006

The hybrid American chestnut planted on Arbor Day, 2005, began showing signs of stress in early May. It was removed in August and replaced with another hybrid chestnut in October. Section 4 / Tree 8

On May 31, five Kousa dogwoods and two fern leaf beeches were planted on the east tradesman bank restoring the

- landscape that was removed for construction. Section 4 / Trees 13, 14, 17-22
- The Glenn Dale azalea collection was replanted along the east tradesman bank. These plants were propagated from the original 1940- and 1950-era plants. The young plants were grown for approximately 10 years at the nursery. Section 4 / Shrub 8
- A Japanese holly hedge along the stairs from east tradesman drive to the north grounds and a ground cover of purple leaf wintercreeper complete the plantings on the east tradesman bank. Section 4 / Shrubs 10, 12
- An American elm, planted before 1900, succumbed to Dutch elm disease and was removed on June 19. This was an earlier hybrid, and it had limited resistance to the disease. Section 3 / Tree 10
- Strong winds and torrential rains felled an American elm planted before 1900. It was removed the next day on June 26. Section 3 / Tree 9
- During a commemorative planting, President and Mrs. Bush planted an American elm on October 2 with past NPS Director Fran Mainella and new NPS Director Mary Bomar. The cultivar "Jefferson" is named for a parent tree that grew on Jefferson Drive on the National Mall and is a well-known National Park Service selection. Section 3 / Tree 10

- Azaleas were planted along the east tradesman drive in September. An evergreen, double bloom, white variety "Helen Curtis", was selected for its compact habit. Section 4 / Shrub 14
- 2007

One of the magnolias planted by Nancy Reagan in 1982 had declined and was replaced by a Merrill magnolia in October. Section 3 / Tree 20

Two Japanese yews were replanted along the east driveway in November. The old yews had been in slow decline and had been removed the previous year. Section 4 / Shrubs 1, 3

Due to the decline of two large American boxwoods in front of the North Portico, two large replacement boxwoods were planted in November. Section 3 / Shrub 7
- 2008

The planting bed east of the VIP entrance to the West Wing was renewed in February with large Nellie R. Stevens hollies, Japanese hollies, and Girard's rose azaleas.

In July, the forsythia beds and the quince on either side of the north fountain were removed.

In August, an American elm, over one hundred years old, was removed due to decay and Dutch elm disease.

Middle Panel

- 2005 The osmanthus hedge along the East Colonnade windows were removed in March and replaced with a new osmanthus hedge. Section 6 / Shrub 5
- The snowcloud crab apple in the corner of the Jacqueline Kennedy Garden was removed in March. A green mountain boxwood was planted in the bed. Section 6 / Tree 14 / Shrub 40
- During the summer, construction began for a new visitor security building. Various trees and shrubs were removed. Section 10 / Trees 9–11, 13, 25, 26 / Shrubs 1–3, 6, 9
- A yellowwood tree was removed in August. This tree was infected with canker and had been in poor condition for several years. Section 6 / Tree 22
- Following wall restoration, a partial replanting of the president's patio was initiated in November. Section 8
- Shrubs around the maintenance building were replaced in November. Section 12 / Shrub 46
- In November, prior to stone restoration of the East Wing exterior walls, hollies, elaeagnus, and a Yoshino cherry in the area were removed. Section 6 / Tree 15 / Shrubs 26, 27, 29, 41, 42
- A European linden was blown down during a storm in 2005 and fell across the road to the triangle. Section 8 / Tree 20

Credit: NPS White House Liaison Design and Construction Office

- The red maples and various shrubs around the chief of staff's patio were removed in August and replaced with littleleaf lindens; a bonfire sugar maple was added. New shrubs include boxwoods, hollies, and a new yew hedge. Section 8 / Trees 29, 30, 31 / Shrubs 31, 33, 34, 46
- 2006 An Okame cherry, a camellia, and three American hollies grown from cuttings from historic White House plantings, were planted after the stone restoration of the East Wing. Section 6 / Tree 15 / Shrubs 26, 27
- The rhododendrons in the west triangle were replaced with green beauty boxwoods. Section 8 / Shrub 57
- 2007 At the east entrance, two Nellie R. Stevens hollies were replaced with two large American Boxwoods.
- 2008 A declining northern red oak was removed in March and replaced in October with another northern red oak. Section 6 / Tree 21
- The vegetative screen between the south grounds and the president's patio, which is composed of hollies, doublefile viburnums, green beauty boxwoods, and a groundcover of pachysandra, was renewed. Section 8 / Shrubs 10–12

Credit: NPS White House Liaison Design and Construction Office

South Panel

- 2008 In March, the row of roseum elegans rhododendrons, at the entrance to the Children's Garden, were replaced with Justin Brouwers boxwoods. Section 12 / Shrub 3
- The vegetation along the east side of the perimeter fence was reinforced by renewing the hollies and doublefile viburnums to help screen the view to the West Wing. Section 11 / Shrubs 36, 37, 38, 40, 41
- The hollies along the west side of the perimeter fence on the south grounds were replaced, and doublefile viburnums were added to soften the hollies. Section 12 / Shrub 43

2005

Reconstruct East Wing Steps

The granite pavers and steps leading from East Executive Avenue to the East Wing entrance were originally designed by architect Lorenzo Winslow in 1942. Today, the walkway design appears not to have changed from the original design, and it is unclear when the walkway and steps were last repaired.

Through years of normal weathering, mortar joints had deteriorated, along with settling and heaving of the paving and curb stones. The rehabilitation of the East Wing sidewalk reused existing paving stones and included removing old mortar and caulking, realigning, and re-pointing most of the walkway and curb stones. Major work items included: disassembling and resetting approximately 30 paving stones and 6 curb stones, repointing approximately 650 square feet of granite paver sidewalk, replacing of the expansion joint on three sides, and cleaning the walkway after completion. The stair section was in good shape and only received re-pointing and replacement of the expansion joints.

2005-2006

Install New Irrigation System

The National Park Service maintains about 18 acres of grounds surrounding the White House. The initial irrigation system for the lawns and garden areas on the south grounds was installed in 1962, and the north grounds irrigation system was added in 1967. These systems reached their serviceable life and required an upgrade.

The 1994 *Greening of the White House Report* recommended optimizing the amount of water used for landscaping to comply with conservation and environmental regulations. The existing, outdated system lacked the technology to control the amount of water used, penetration depth, and zoning to allow watering only when and where needed.

The new irrigation system includes underground piping, sprinkler heads and quick couplers, control devices, and monitoring equipment. Phase I of the project began installation on the north grounds in 2005. The following summer, in 2006, phase II concluded the installation of a new irrigation system on the south grounds.

Repave North Grounds Roadway

In 2005, repairs were made to the deteriorated asphalt directly in front, underneath, and on either side of the North Portico. About 1,000 square yards of asphalt pavement were milled and repaved to create a safer walking surface for visitors.

In 2006 the deteriorated asphalt pavement on the east and west sides of the circular drive was rehabilitated. The work performed was based upon the recommendations of the April 2005 Federal Highway Administration, Eastern Federal Lands Highway Division report titled "President's Park, Pavement Rehabilitation Recommendation for North Loop Drive in North Grounds, Washington, DC."

All existing asphalt pavement was removed and replaced, the supporting subsoil was evaluated, and soft areas were replaced. Granite curbing that was visually displaced was reset, subsoil edge drains were installed to remove moisture from the supporting subgrade, and all of the granite curbing was cleaned. Four concrete drop inlet slab tops were also replaced by granite tops to match the current standard used in President's Park.

Replace West Terrace Steps

The West Terrace steps are a well known and well used feature, and they often serve as the platform from which presidents address media or various groups in the Rose Garden. The original steps appear to have been designed by the National Park Service in April 1962. Stone shop drawings, created by McLeod & Romborg Stone Company, Bladensburg, Maryland, were used to re-create the steps with minor modifications.

The Indiana limestone steps were deteriorating as evidenced by the many patches and dutchmen present in the existing steps. The rehabilitation was facilitated by removal and replacement of the limestone steps, landings, mortar, and setting bed from the coping on the terrace to and including the ground level landing. All limestone steps and landing materials were salvaged, palletized, and stored.

Credit: The White House Photo Office

Repair First Lady's Garden Pool

As requested by Lady Bird Johnson, the east garden (named by her for Jacqueline Kennedy) was redesigned (from the original Beatrix Ferrand design) by Rachel Lambert Mellon and completed in fall 1964. It included a small pool (similar in shape to the Ferrand pool, but smaller) with five S-shaped spouts in the center and a bronze sculpture by Sylvia Shaw Judson entitled *Gardener*—which is a child holding a trowel and a plant with a watering can at her feet. In the warmer months, potted santolinas or impatiens are set in the four corners. The pool is on the east end of the garden on axis with the grass panel and pergola.

Wet conditions combined with freezing and thawing over years had deteriorated the pointing and setting mortar of the coping stones, which were in good condition, and the stones had loosened. The 24 Pennsylvania bluestone coping stones around the perimeter of the fountain were disassembled and cleaned; then they were reset and re-pointed with one stone flipped over for aesthetic purposes.

Repair the President's Patio Fountain

The president's patio fountain and adjacent sunken flagstone patio was constructed in 1986. The at-grade fountain is along a sidewalk and is on access with the steps and sunken patio. A stone wall mimics the shape of the pool and contains a cast lion's head. Water flowing through the head cascades into a shell-shaped basin, which is also attached to the wall that empties into a larger pool sunken below the level of the sidewalk.

The Indiana limestone coping stones were deteriorating, as evidenced by the many patches and dutchmen. The fountain required removal and replacement of the limestone coping stones and setting beds while maintaining the integrity of the waterproof lead liner. The existing stones were removed from the site and destroyed.

2007

Install Rose Garden Lighting

To give the garden presence at night and to enhance the beauty of the trees in the Rose Garden, subtle lighting techniques and efficient lighting systems were installed around the perimeter of the garden. The magnolias, anchoring the corners of the Rose Garden, are lit with fixtures under the open, branching canopies to create a glowing effect. Fixtures mounted high and aimed down through the foliage create dappled patterns on the ground below. Lighting the crab apple trees emphasizes the perspective to the garden's foreground with a subdued pattern of light by placing the fixtures close to the trunks and uplighting the trees to subtly highlight texture and form.

Reconstruct Gatehouses

As part of an ongoing effort by the Secret Service to upgrade existing security at the White House, two new gatehouses were constructed at the southwest entrance of the White House complex to replace existing gatehouses.

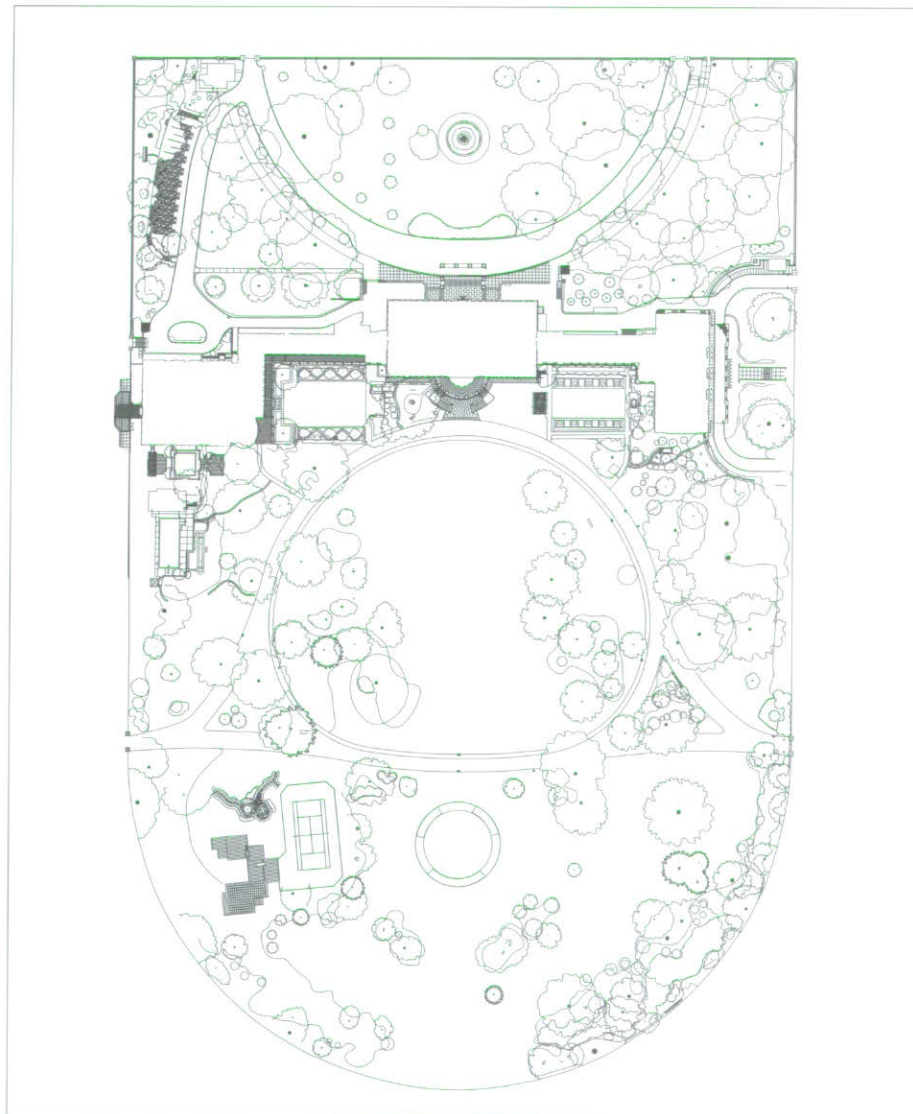

Three gatehouses were removed, and two new gatehouses were constructed to allow for technological advances in security. The larger gatehouse processes access and egress of appointments, staff, couriers, and contractors; inspects packages and equipment entering the complex; and monitors vehicular traffic accessing West Executive Avenue. The smaller gatehouse controls access of vehicles and pedestrians into the south grounds. The overall architectural style, appearance, materials, and finishes are consistent with the Commission of Fine Arts approved design established for the site. Other improvements incorporated into the design of the new facilities included visitor/officer comfort and handicap accessibility.

Historic American Landscape Survey of White House Grounds

The National Park Service partnered with the Executive Residence to sponsor the documentation of the north and south grounds landscape according to the standards of the Historic American Landscape Survey (HALS). The purpose of HALS is to assist in the preservation of significant landscapes. Drawings are completed based on extensive research of the historic landscape, surveys, and features. These drawings are then used to assist in directing the planning efforts for rehabilitation and restoration, and they can facilitate in the interpretation of this significant landscape. Additionally, the completed documentation was electronically formatted for use as an accurate set of base drawing files for all future work that may affect the historic landscape at the White House.

2008

Repair Stone Piers at Northwest and Northeast Gates

There has been an iron fence along Pennsylvania Avenue with stone piers marking the entrance to the drive since the early 19th century. The piers are made of coursed ashlar Aquia Creek sandstone blocks, the same stone used for the White House. They have remained relatively unchanged since their construction in 1818. Alterations were made to electrify the light fixtures on top of the piers flanking the drive and to install the infrastructure for the automated gates.

Time and the elements had caused the stone piers to deteriorate, and multiple layers of paint started to hide the original carved details. Previous repairs had been poorly executed (using inappropriate materials or methods) and mortar joints were failing, which allowed water to seep in between the stones. In addition, the use of emulsion-type paint coatings as a surface treatment likely exacerbated the situation by trapping moisture within the stone. The painted coatings were removed from the stone, the condition of the natural stone was recorded, and the mortar was analyzed for appropriate strength. Dutchman repairs were made where possible using a composite material that matched the existing stone in color, texture, and compressive strength. Seriously deteriorated stones were replaced with new Aquia Creek stone blocks that had been salvaged and stored by the National Park Service.

Once the piers were repaired, they were repainted with their original white color to match the White House. The work was accomplished by the National Park Service Historic Preservation Training Center (HPTC).
