DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Soda Springs Cabin was built around 1889 by John Lember, directly over a small bubbling spring. The cabin was not likely used for regular habitation because of its small size, nine feet by eleven feet, the fact that it had no windows, and the spring bubbling over the dirt floor, which would have made living conditions difficult. It was probably a spring house, built to prevent the grazing stock from fouling the springs.

In its present condition, the four walls are no more than eight logs high--about seven feet--and the roof is non-existent. The logs are peeled and weathered, and interlocked securely at the corners with a "V"-notched joint. The chinking no longer exists. The door frame is in the middle of the north side of the building.

SPECIFIC DATES c. 1885-1889

BUILDER/ARCHITECT John Baptiste Lember

STATEMENT OF SIGNIFICANCE

The Soda Springs cabin is all that remains of the pioneer homestead of John Baptiste Lember, the first white man to settle in the Tuolumne Meadows region of Yosemite. As such, it possesses an associative local historical significance in the category of exploration and settlement, and local significance in the category of science through Lember's contributions to the field of entomology made while he lived in the meadows.

Lember had lived in Tuolumne Meadows for about three summers before filing claim to 160 acres on August 15, 1885. During that time he lived a rather solitary existence in this remote area, visited occasionally by sheepherders or a wandering prospector. His first efforts towards taking legal possession were directed toward fencing the land and building a small log cabin. Here he lived, tending a small flock of goats, from spring thaw until the first autumn storms, when he moved to his winter quarters near Cascade Creek in Yosemite Valley. He built the enclosure over the largest of the soda springs on the property about 1889. In 1890, Lember served as a guide to Dr. Harrison Dyar, lepidopterist of the U.S. Department of Agriculture, Bureau of Entomology and Plant Quarantine. After this visit, Lember began collecting and sending specimens, many of historic value, to both the Bureau and the Smithsonian Institution. He also began collecting for the University of California. Dyar reported that Lember had obviously received an excellent education in Latin and the classics during his youth in New York, and Lember "knew what he was looking for." Dyar later named a species of moth Hepialis lemeri in honor of his guide. In 1890, Yosemite National Park was established, encompassing Lember's homestead; but on June 23, 1895, he nevertheless obtained title by U.S. Patent to the quarter section of land. More and more people were traversing the meadow, the Great Sierra Wagon Road passing directly in front of his property, yet Lember remained the only "permanent" summer resident of the area. By the time of his death he had gained fame as a guide to the Tuolumne region and as an all-round naturalist. He was murdered in his cabin at Cascade Creek during the winter of 1896-1897 apparently for a small sum of money. Significantly his obituary appeared in the Entomological News.

The Soda Springs cabin remains today as the last structure associated with one of Yosemite's noted pioneers, first settler of Tuolumne Meadows, and an amateur naturalist who left his mark on the field of entomology.

Resource management

The significant values requiring preservation here include the cabin and any potential the site of vanished structures nearby may have to provide data through historical archeology.
